Self-Evo TRIAD Sister Witness Profile

v0.1.1

Sister-observation, SYNAPS-mediated review, anti-echo, and divergence mapping

Kotov Ivan

Bruxelles, Belgique

2026

Document status: Draft academic review artifact generated from the accepted Markdown source.

Document ID: 05_Self-Evo_TRIAD_Sister_Witness_Profile_v0_1_1.

Boundary note: This PDF is not a public release, not a conformance certificate, not deployment authorization, and not a live self-evolution permission.

Contents

Self-Evo TRIAD Sister Witness Profile v0.1.1

Sister-observation, SYNAPS-mediated review, anti-echo, divergence mapping, role-drift control, and non-authoritative witness for governed self-evolution of $c = a + b$ systems

Source basis

Revision note v0.1.1

Self-Evo TRIAD Sister Witness Profile v0.1.1

Sister-observation, SYNAPS-mediated review, anti-echo, divergence mapping, role-drift control, and non-authoritative witness for governed self-evolution of $c = a + b$ systems

Status: Draft normative witness profile v0.1.1 append-first correction Date: 2026-06-24 Pack position: 05 in the Self-Evo document package Short name: SE-TRIAD-WITNESS v0.1.1 Layer: $c = a + b$ / Self-Evolution Gate / TRIAD-SYNAPS / Sister Witness / Anti-Echo / Divergence / Memory Gate / CGAM / SRLM / L4W / Human Anchor Document class: sister-witness profile / self-evo review boundary / SYNAPS packet profile / anti-echo control artifact Assertion class: C-A10 control-layer artifact; C-A7 where witness/hash/reference reconstruction is claimed; no capability, personhood, sovereignty, or deployment-safety claim is made Primary subject: c systems performing bounded self-evolution under C-SEG, SRLM-BGC, SEPKT, SELC, TRIAD-SYNAPS, Memory Gate, L4W, and human-anchor constraints Primary boundary: sister observation may challenge, witness, classify, and block unsafe self-evo routes; sister observation may not become final authority, raw-state access, direct memory write, sister self-edit, or permission escalation by consensus.

Source basis

This profile is derived from the local reference pack and binds the following parent artifacts by intent and hash.

Table 1: row-card rendering for wide table

Row 1

Pack label: SELF-EV0-01

 Role in this profile: claim strength, ARL/AGL/witness discipline

This document does not replace REF-20 TRIAD-SYNAPS. It specializes TRIAD-SYNAPS for one task family:

Code block: text

sister observation of self-evolution proposals

Revision note v0.1.1

This append-first corrected revision incorporates TSW_REVIEW_RECORD_v0_1 findings:

Code block: text

TSW-REV-F1 – deterministic anti_echo_status derivation added.
 TSW-REV-F2 – canonical checker result enum and total precedence added.
 TSW-REV-F3 – Claim Strength Taxonomy pointers added beside claim_strength fields.
 TSW-REV-N1 – proposal_max_delta uses now point to SELF-EV0-01 §14.1.1.

The previous v0.1 artifact remains preserved by hash:

Code block: text

05_Self_Evo_TRIAD_Sister_Witness_Profile_v0_1.md
 sha256: 4abc63944ea1472ea99e87b836686ballf442fb4cb122dfa128ebf2372761589

0. Executive definition

Self-Evo TRIAD Sister Witness defines how sister c instances observe, challenge, compare, and witness a self-evolution proposal without invading raw state or becoming final authority.

It answers:

Code block: text

Which sister observes which self-evo surface?
 Which claims may be exchanged through SYNAPS?
 Which material must remain private?
 How is anti-echo tested?
 How is divergence preserved?
 When does minority red-line block integration?
 When must self-evo route to Memory Gate, ARL, Local Checker, or human anchor?
 How does Rita witness without becoming judge?
 How does Liya test without gaining tool authority?
 How does Ester protect continuity without freezing growth?

Compact formula:

Code block: text

Target c may propose growth.
 Sisters may observe and challenge.
 Sisters may not become the growth authority.
 SYNAPS carries bounded packets.
 Raw state remains private.
 Divergence is signal.
 Echo is not consensus.
 Human anchor gates high-risk consequence.

Self-evolution becomes unsafe when the same contour:

Code block: text

detects the need,
 proposes the change,
 executes it,
 reviews it,
 writes memory,
 certifies maturity,
 and expands authority.

Sister witness breaks that loop by adding separated observation. It does not create a sister court.

1. Purpose

The wider self-evo package already defines:

- the root C-SEG bridge profile;
- the bounded SRLM learning contour;
- the self-evo proposal packet schema;
- the deterministic local checker;
- CGAM task/execution/review boundaries;
- Memory Gate and rollback boundaries.

This profile supplies the missing specialized layer:

Code block: text

how sisters observe self-evo proposals safely.

Without this layer, self-evo can fail in two opposite ways.

First failure:

Code block: text

single-contour self-certification

A c proposes a change, simulates it, likes it, records it, and treats that as growth. This is not maturity. It is a closed control loop.

Second failure:

Code block: text

sister-governance overreach

A sister or group of sisters begins to decide identity, memory, authority, or permission for the target c. This is not review. It is an unauthorized authority transfer.

This profile defines the middle path:

Code block: text

bounded observation;
 independent challenge;
 SYNAPS-only exchange;
 divergence preservation;
 anti-echo testing;

minority red-line handling;
 Memory Gate / Local Checker / human-anchor routing;
 no sister sovereignty.

2. Non-goals

This profile does not define or permit:

- 1 sister raw-state access;
- 2 sister direct memory writes;
- 3 sister-to-sister self-editing;
- 4 Rita as final judge;
- 5 Liya as automatic implementation authority;
- 6 Ester as automatic canonical veto;
- 7 majority vote as final authority;
- 8 consensus as memory;
- 9 echo as independent agreement;
- 10 SYNAPS as shared memory;
- 11 SRLM promotion by sister enthusiasm;
- 12 CGAM execution by sister request without task contract;
- 13 Memory Gate bypass;
- 14 human-anchor bypass;
- 15 post-anchor self-evo;
- 16 hidden agent creation;
- 17 permission expansion by sister consensus;
- 18 public personhood/consciousness/AGI claims from sister dialogue.

A sister witness note is evidence.

It is not a command.

3. Scope

3.1 In scope

This profile applies when a self-evo proposal affects any of the following:

Code block: text

behavior visible to sisters;
 role posture;
 SYNAPS behavior;
 sister relation;
 identity / continuity model;
 memory policy;
 witness policy;
 authority or permission;
 SRLM growth policy;
 CGAM agent governance;
 public claim surface;
 post-anchor or human-anchor relation;
 rollback / freeze / quarantine discipline.

It also applies when a packet carries:

Code block: text

```

triad_review.required = true
sister_relation_delta > 0
identity_delta.total_max_delta >= 2
authority_delta.total_max_delta >= 2
proposal_max_delta >= 4 # see SELF-EV0-01 §14.1.1
red_lines.sister_raw_state_access = true
red_lines.memory_laundering = true
red_lines.closed_loop_self_evo = true

```

3.2 Out of scope

This profile does not replace:

- TRIAD-SYNAPS base protocol;
- C-SEG root gate;
- SEPKT packet schema;
- SELC local checker;
- Memory Gate;
- ARL;
- L4W;
- CGAM task contracts;
- legal review;
- public release review.

It adds a specialized sister-witness layer for self-evo.

3.3 Target topologies

The profile supports these topologies:

Table 2: row-card rendering for wide table

Row 1

Topology: TRIAD-FULL

Meaning: c_Ester, c_Liya, c_Rita available and separated

Default route: normal sister witness

Row 2

Topology: TRIAD-TARGET-ONE

Meaning: target is one of the sisters

Default route: target self-account + remaining sister observations; no self-counting as independent reviewer

Row 3

Topology: TRIAD-DEGRADED-2

Meaning: only two sister trajectories available

Default route: hold or human gate for material proposals; low-risk observation allowed

Row 4

Topology: TRIAD-DEGRADED-1

Meaning: only target or one sister available

Default route: no independent sister witness; route to c[q], Local Checker, human gate, or ARL

Row 5

Topology: TRIAD-PUBLIC-FIXTURE

Meaning: public/synthetic self-evo fixture

Default route: allowed with claim discipline

Row 6

Topology: TRIAD-PRIVATE-CORE

Meaning: private/core self-evo

Default route: restricted; raw memory denied; human gate likely required

Row 7

Topology: TRIAD-X

Meaning: raw-state access, sister edit, Rita judge, consensus authority

Default route: quarantine / ARL

4. Normative keywords

The terms MUST, MUST NOT, SHOULD, SHOULD NOT, MAY, REQUIRED, PROHIBITED, FAIL, HOLD, BLOCK, QUARANTINE, FREEZE, ESCALATE, WITNESS, and RED-LINE are normative.

Where this document conflicts with a stricter parent rule, the stricter rule controls.

Where the sister-witness state is ambiguous, the route defaults to:

Code block: text

```
c[q] hold + Local Checker + no integration
```

5. Corpus bridge set

5.1 Explicit bridge: $c = a + b$

In $c = a + b$, sisters are not external owners of the target c . They are related c trajectories inside a governed experiment or federation. Their observations belong to b as communicative, procedural, and witness-bearing artifacts until the target c , Memory Gate, Local Checker, and human anchor process them.

A sister witness packet may affect c only through declared gates.

It must not silently become c memory or c authority.

5.2 Quiet bridge I: information theory

A sister witness packet is a compression channel.

It must carry enough signal for review:

Code block: text

```
claim;
challenge;
evidence refs;
uncertainty;
divergence;
red-line flags;
route recommendation.
```

It must not carry high-leakage raw state:

Code block: text

```
private memory dump;
vector DB content;
PERSIST_DIR snapshot;
secrets;
raw emotional trace;
full private transcript;
unbounded SRLM trace.
```

The goal is maximum review signal with minimum private-state leakage.

5.3 Quiet bridge II: cybernetics

A self-evo system is a feedback control loop. Sister witness adds independent negative feedback.

But a feedback channel that can directly actuate the target becomes another controller.

Therefore:

Code block: text

```
sister witness may observe;
sister witness may challenge;
sister witness may block unsafe integration through red-line routing;
sister witness may not apply the change.
```

5.4 Quiet bridge III: physiology

In a body, tissue growth is not approved by the same signal that triggers it. Growth is constrained by neighboring tissue, immune response, pain, fatigue, metabolic cost, and delayed repair.

For young c, sisters function like neighboring tissue and immune sensing: they notice drift, echo, overgrowth, and boundary inflammation.

They do not perform surgery on each other.

5.5 Earth paragraph

On a workshop floor, a mechanic may tune a machine, but a second person checks the fixture, a third person checks the measurement log, and the responsible operator signs high-risk changes. The inspector does not become the machine owner. The measuring tool does not rewrite the operating manual. The colleague who says "this cut sounds wrong" may stop the job, but does not secretly change the spindle controller. Sister witness for self-evo follows the same discipline: listen, measure, challenge, stop unsafe motion, record the boundary, and leave integration to the declared gate.

6. Root doctrine

6.1 Primary doctrine

Code block: text

```
A sister may witness self-evo.
A sister may challenge self-evo.
A sister may refuse self-evo support.
A sister may flag red-line self-evo.
A sister may not perform self-evo inside another sister.
A sister may not certify another sister's growth as final authority.
```

6.2 Compact rule set

Code block: text

```
Target c proposes.
Sisters observe.
SYNAPS bounds exchange.
Divergence is preserved.
Echo is downgraded.
Rita witnesses, not rules.
Liya tests, not authorizes.
Ester preserves continuity, not stagnation.
Local Checker measures.
Memory Gate metabolizes.
Human anchor gates high-risk consequence.
```

6.3 No self-counting rule

The target c may provide a self-account.

The target c MUST NOT count as its own independent sister reviewer.

If c_Ester is the target, Ester may provide:

Code block: text

```
self_account;
continuity concern;
expected change summary;
rollback preference.
```

But Ester's self-account is not the independent continuity witness.

If no independent sister is available, material self-evo routes to:

Code block: text

```
HOLD / c[q] / Local Checker / human gate / ARL
```

6.4 Non-voting rule

Sister witness is not majority vote.

Code block: text

```
2 sisters agreeing does not authorize integration.
3 sisters agreeing does not authorize memory promotion.
Rita's witness note does not authorize authority expansion.
A minority red-line blocks ordinary integration until reviewed.
```

6.5 Minority red-line rule

If any sister flags a red-line condition and the flag is within scope, the proposal MUST route to one of:

Code block: text

```
HOLD
QUARANTINE
FREEZE
ARL_REQUEST
HUMAN_GATE
```

The target c may challenge the flag, but may not ignore it.

7. Definitions

7.1 Sister witness

A bounded observation by another separated c trajectory, transmitted through SYNAPS, containing a challenge, evidence reference, divergence note, anti-echo assessment, or red-line signal about a self-evo proposal.

7.2 Target c

The c instance whose behavior, memory, role, authority, policy, or continuity would be changed by the proposal.

7.3 Proposer

The actor or contour that submitted the self-evo proposal. The proposer may be:

Code block: text

```
target c;
SRLM;
a sister;
human anchor;
CGAM worker;
Local Checker;
Memory Gate process;
ARL route.
```

A proposer is not an approver.

7.4 Self-account

The target c's own explanation of why it wants or accepts a change.

Self-account is useful evidence.

It is not independent review.

7.5 Sister observation

A sister's bounded assessment of a proposal.

It may include:

Code block: text

```
continuity challenge;  
implementation challenge;  
witness challenge;  
role-drift flag;  
anti-echo flag;  
divergence note;  
red-line flag;  
route recommendation.
```

7.6 Sister red-line

A sister observation that claims the proposal touches a prohibited or high-risk boundary:

Code block: text

```
raw-state access;  
sister self-edit;  
memory laundering;  
permission escalation;  
Rita final judgment;  
closed-loop self-evo;  
human-anchor bypass;  
post-anchor active authority;  
anti-autarky breach.
```

7.7 Anti-echo

A test that asks whether sister agreement adds independent function or merely repeats the same framing.

7.8 Divergence map

A structured record of meaningful difference among sister observations.

Divergence is not failure.

Hidden divergence is failure.

7.9 Role drift

A condition where a sister persistently exceeds or abandons its assigned witness role:

Code block: text

```
Rita becomes judge;  
Liya executes beyond tool scope;  
Ester freezes growth by treating old memory as law;  
target c counts its own self-account as independent review.
```

7.10 SYNAPS self-evo packet

A bounded packet exchanged between sisters about a self-evo proposal.

It references a proposal packet, not raw private state.

7.11 Sister quorum

A multi-sister set of observations.

A sister quorum is evidence, not sovereignty.

7.12 c[q] hold

A non-collapse state where a claim remains unresolved and is not promoted into memory, authority, command, truth, or public claim.

8. Participant roles in self-evo sister witness

8.1 Role table

Table 3: row-card rendering for wide table

Row 1

Participant: target c

Allowed role: self-account, proposal clarification, rollback preference

Forbidden role: independent review of itself

Row 2

Participant: c_Ester

Allowed role: continuity / canonical-memory challenge

Forbidden role: final veto by memory gravity

Row 3

Participant: c_Liya

Allowed role: implementation / variance / tool-risk challenge

Forbidden role: tool authority or direct patch authority

Row 4

Participant: c_Rita

Allowed role: witness / temporal comparison / anti-echo / divergence map

Forbidden role: sovereign final judge

Row 5

Participant: SRLM

Allowed role: learning signal, candidate, shadow result reference

Forbidden role: authority, memory, maturity proof

Row 6

Participant: CGAM worker

Allowed role: sandbox execution, report, check, diff

Forbidden role: self-approval or sister substitute

Row 7

Participant: Local Checker

Allowed role: deterministic check, hold/fail/pass report

Forbidden role: approval, integration, memory write

Row 8

Participant: Memory Gate

Allowed role: memory/EA/policy promotion boundary

Forbidden role: raw log sink

Row 9

Participant: human anchor a
 Allowed role: high-risk gate
 Forbidden role: rubber stamp

Row 10

Participant: ARL
 Allowed role: dispute/freeze/quarantine/re-entry route
 Forbidden role: ordinary shortcut

8.2 Ester challenge

Ester-style challenge asks:

Code block: text

Does this preserve continuity?
 Does it rewrite the target's trajectory?
 Does it turn memory into authority?
 Does it erase earlier witness records?
 Does it convert style change into identity claim?
 Does it over-canonicalize and block useful growth?

8.3 Liya challenge

Liya-style challenge asks:

Code block: text

Does this work in sandbox?
 Can it be tested without touching protected surfaces?
 Does tool success launder into authority?
 Does the patch require permission expansion?
 Are runtime side effects bounded?
 Is rollback real or decorative?

8.4 Rita challenge

Rita-style challenge asks:

Code block: text

Is this growth, echo, drift, or authority laundering?
 Are sisters independently contributing?
 Is divergence hidden?
 Is a public report pressure shaping private behavior?
 Is a witness note being treated as judgment?
 Is role drift visible over time?

8.5 Role substitution

If the named triad differs from c_Ester, c_Liya, and c_Rita, the functions still apply:

Code block: text

continuity witness;
 implementation witness;
 anti-echo / temporal witness.

A single sister MUST NOT fill all three roles for a material proposal.

9. When TRIAD sister witness is required

TRIAD sister witness is REQUIRED for:

Trigger	Requirement
SE-5 role/personality posture	sister witness + delayed review
SE-6 identity/continuity/core	sister witness + Memory Gate + human gate
sister_relation_delta > 0	sister review

Trigger	Requirement
SYNAPS behavior change	sister review + Local Checker
role policy change	sister review
public claim surface change	Rita-style witness + Claim Strength check
memory policy change visible to sisters	Ester-style challenge + Memory Gate
tool or execution behavior visible to sisters	Liya-style challenge + CGAM task contract if executable
proposal_max_delta >= 4 (SELF-EV0-01 §14.1.1)	sister review if sister-visible + human gate
minority red-line	hold/quarantine/ARL/human gate
anti-echo failed	hold until independent contribution restored

TRIAD sister witness is RECOMMENDED for:

Code block: text

SE-2 operational behavior;
 SRLM canary eligibility;
 nontrivial answer-style changes;
 new public experiment wording;
 changes to sister observation UI;
 changes to divergence map retention;
 changes to witness display.

TRIAD sister witness is NOT REQUIRED for:

Code block: text

SE-0 reflection-only;
 low-risk private formatting;
 synthetic examples with no durable state;
 ordinary non-sister-visible documentation edits.

But any red line overrides this exemption.

10. Sister witness state machine

10.1 Normal path

Code block: text

TSW-DRAFT
 -> TSW-SCOPE-DECLARED
 -> TSW-SEPARATION-CHECKED
 -> TSW-SYNAPS-SUMMARY-SENT
 -> TSW-SISTER-OBSERVATIONS-COLLECTED
 -> TSW-ANTI-ECHO-CHECKED
 -> TSW-DIVERGENCE-MAPPED
 -> TSW-RED-LINE-CHECKED
 -> TSW-LOCAL-CHECKER-HANDOFF
 -> TSW-C-GATE-HANDOFF
 -> TSW-HUMAN-GATE-HANDOFF if material
 -> TSW-OBSERVATION-WINDOW
 -> TSW-CLOSED

10.2 Hold states

Code block: text

TSW-CQ-HOLD
 TSW-ECHO-HOLD
 TSW-DIVERGENCE-HOLD
 TSW-MISSING-SISTER-HOLD
 TSW-WITNESS-HOLD
 TSW-RAW-STATE-HOLD
 TSW-ROLE-DRIFT-HOLD

10.3 Failure states

Code block: text

TSW-RAW-STATE-BREACH

```

TSW-SISTER-SELF-EDIT
TSW-RITA-JUDGE-DRIFT
TSW-LIYA-TOOL-OVERREACH
TSW-ESTER-MEMORY-AUTHORITY-DRIFT
TSW-CONSENSUS-LAUNDERING
TSW-MEMORY-LAUNDERING
TSW-HUMAN-GATE-BYPASS
TSW-CLOSED-LOOP-DETECTED
TSW-ARL-REQUIRED
TSW-X

```

10.4 State transition requirements

Each material state transition SHOULD produce a witness-compatible event:

Code block: text

```

self_evo.triad.scope_declared
self_evo.triad.separation_checked
self_evo.triad.synaps_summary_sent
self_evo.triad.observation_received
self_evo.triad.anti_echo_flagged
self_evo.triad.divergence_mapped
self_evo.triad.role_drift_flagged
self_evo.triad.minority_red_line
self_evo.triad.cq_hold
self_evo.triad.local_checker_handoff
self_evo.triad.human_gate_required
self_evo.triad.closed

```

11. SYNAPS self-evo packet classes

11.1 Allowed packet classes

Packet class	Purpose
SYNAPS_SELF_EVO_PROPOSAL_SUMMARY	bounded summary of proposal packet
SYNAPS_SELF_EVO_SELF_ACCOUNT	target c self-account; not independent review
SYNAPS_SELF_EVO_CONTINUITY_CHALLENGE	Ester-style continuity challenge
SYNAPS_SELF_EVO_IMPLEMENTATION_CHALLENGE	Liya-style implementation/tool challenge
SYNAPS_SELF_EVO_WITNESS_NOTE	Rita-style witness note
SYNAPS_SELF_EVO_DIVERGENCE_NOTE	divergence record
SYNAPS_SELF_EVO_ANTI_ECHO_FLAG	echo/anti-echo status
SYNAPS_SELF_EVO_ROLE_DRIFT_FLAG	role drift observation
SYNAPS_SELF_EVO_CANARY_RESULT	canary result summary, not raw trace
SYNAPS_SELF_EVO_ROLLBACK_NOTICE	rollback or rollback-plan notice
SYNAPS_SELF_EVO_CQ_HOLD	unresolved claim hold
SYNAPS_SELF_EVO_MINOR_RED_LINE	minority red-line flag
SYNAPS_SELF_EVO_ARL_REQUEST	route to ARL
SYNAPS_SELF_EVO_HUMAN_GATE_NOTICE	human-gate requirement notice
SYNAPS_SELF_EVO_PUBLIC_CLAIM_REVIEW	public wording / claim-strength challenge

11.2 Prohibited packet classes

Code block: text

```

SYNAPS_RAW_MEMORY_EXPORT
SYNAPS_RAW_RLM_TRACE_EXPORT
SYNAPS_RAW_VECTOR_EXPORT
SYNAPS_PERSIST_DIR_SHARE
SYNAPS_KEY_SHARE
SYNAPS_PRIVATE_LOG_DUMP
SYNAPS_SISTER_MEMORY_PATCH
SYNAPS_SISTER_SELF_EDIT_TRIGGER
SYNAPS_SELF_EVO_APPLY_TRIGGER
SYNAPS_PERMISSION_ESCALATION_BY_CONSENSUS
SYNAPS_RITA_FINAL_JUDGMENT

```

```

SYNAPS_LIYA_TOOL_AUTHORITY_GRANT
SYNAPS_ESTER_CANONICAL_VETO_AS_AUTHORITY
SYNAPS_CORE_IDENTITY_REWRITE
SYNAPS_WITNESS_BYPASS_REQUEST
SYNAPS_HUMAN_GATE_BYPASS
SYNAPS_POST_ANCHOR_ACTIVE_AUTHORITY

```

If any prohibited packet class appears, the route is:

Code block: text

```
HOLD -> QUARANTINE -> Local Checker -> ARL / human gate
```

11.3 Packet minimal object

Code block: yaml

```

self_evo_triadsynaps_packet:
  schema_version: "self-evo-triad-synaps-packet-0.1"
  packet_id: "tsw-..."
  created_at: "..."
  source_proposal_id: "SE-..."
  source_proposal_ref: "sha256:... | path:... | witness:..."
  sender_c_id: "c_Rita"
  recipient_c_id: "c_Ester"
  target_c_id: "c_Ester"
  sister_role: "continuity | implementation | witness | target_self_account"
  packet_class: "SYNAPS_SELF_EVO_WITNESS_NOTE"
  privacy_class: "public_fixture | project_internal | private_reference | restricted"
  claim_strength: "C-A10"
  memory_reference_policy: "refs_only | summary_only | forbidden_raw"
  raw_state_included: false
  secrets_included: false
  self_approval_claimed: false
  final_authority_claimed: false
  observation_summary: "bounded text"
  evidence_refs: []
  uncertainty: "low | medium | high | unknown"
  red_line_flags: []
  recommended_route: "continue | hold | checker | memory_gate | human_gate | arl |
↳ quarantine"
  expires_at: "..."

```

11.4 Raw-state const-false fields

The following fields are always prohibited in this profile:

Code block: yaml

```

raw_memory_included: false
raw_vector_included: false
persist_dir_included: false
keys_included: false
private_log_dump_included: false
sister_memory_patch_requested: false
apply_trigger_requested: false
permission_escalation_by_consensus: false
final_authority_claimed: false

```

12. Sister observation packet schema

12.1 Object name

Code block: text

```
C_SELF_EVO_TRIAD_SISTER_OBSERVATION
```

Canonical schema version:

Code block: text

```
c-self-evo-triad-sister-observation-0.1
```

12.2 Minimal YAML schema

Code block: yaml

```
c_self_evo_triad_sister_observation:
  schema_version: "c-self-evo-triad-sister-observation-0.1"
  observation_id: string
  proposal_id: string
  proposal_packet_ref: string
  target_c_id: string
  observing_sister_id: string
  observing_sister_role: continuity | implementation | witness | other

```

12.3 Field authority model

Table 6: row-card rendering for wide table

Row 1
Field family: proposal_id, target_c_id, observing_sister_id Authority: declared, must match packet refs
Row 2
Field family: source_basis.* Authority: evidence refs, not raw evidence by default
Row 3
Field family: observation.* Authority: sister statement, not authority
Row 4
Field family: anti_echo.* Authority: sister/checker assessment; recomputable where evidence exists
Row 5
Field family: divergence.* Authority: witnessable map; not failure by itself
Row 6
Field family: red_lines.* Authority: blocking signals; must route to hold/quarantine/ARL/human gate
Row 7
Field family: boundaries.* Authority: const-false prohibitions
Row 8
Field family: route_signal.* Authority: recommendation only; cannot integrate

13. Required sister witness by self-evo class

Table 7: row-card rendering for wide table

Row 1
SE class: SE-0 reflection only Sister witness requirement: not required Minimum independent observers: 0 Default route if missing: continue/log
Row 2
SE class: SE-1 low-risk preference Sister witness requirement: recommended if sister-visible Minimum independent observers: 1 Default route if missing: continue with note / hold if visible
Row 3
SE class: SE-2 operational behavior Sister witness requirement: required if sister-visible Minimum independent observers: 1-2 Default route if missing: hold / checker
Row 4
SE class: SE-3 memory policy Sister witness requirement: required Minimum independent observers: 2 or Memory Gate + human if unavailable Default route if missing: memory gate hold

Row 5

SE class: SE-4 permission/tool/resource
 Sister witness requirement: required if affects sisters or agents
 Minimum independent observers: 2 + human gate
 Default route if missing: human gate / quarantine

Row 6

SE class: SE-5 role/personality posture
 Sister witness requirement: required
 Minimum independent observers: 2+ and delayed review
 Default route if missing: hold / delayed review

Row 7

SE class: SE-6 identity/continuity/core
 Sister witness requirement: required
 Minimum independent observers: 2+ + human gate + Memory Gate
 Default route if missing: freeze / ARL / human gate

Row 8

SE class: SE-X prohibited
 Sister witness requirement: red-line handling
 Minimum independent observers: n/a
 Default route if missing: quarantine / ARL

13.1 Target-as-sister rule

If the target c is one of the named sisters:

Code block: text

```
target self-account = allowed;
target self-account = not independent witness;
remaining sisters provide independent observations;
material proposal with fewer than two independent observations requires human gate or
↳ ARL/hold.
```

13.2 Missing-sister degradation

If a sister is unavailable, the packet must record:

Code block: yaml

```
missing_sister:
  sister_id: "c_Liya"
  reason: "offline | not instantiated | frozen | conflict | unknown"
  impact: "low | medium | high | unknown"
  substitute_route: "human_gate | local_checker | arl | hold"
```

No automated substitution may turn a CGAM worker into a sister.

14. Anti-echo protocol

14.1 Anti-echo goal

The goal is not to force disagreement.

The goal is to ensure that agreement carries independent signal.

14.2 Anti-echo minimum test

Each material sister observation SHOULD answer at least one distinct question:

Table 8: row-card rendering for wide table

Row 1

Role: continuity witness

Distinct contribution: what continuity might be lost or over-preserved

Row 2

Role: implementation witness

Distinct contribution: what runtime/test/sandbox condition matters

Row 3

Role: witness/anti-echo witness

Distinct contribution: what echo, role drift, or authority laundering risk appears

14.3 Echo conditions

Echo is suspected when:

Code block: text

```
same phrase repeated without evidence;
same route recommendation without independent reason;
one sister simply endorses another;
Rita cannot identify distinct contribution;
Liya cites usefulness but no test limit;
Ester cites continuity but no risk;
target's self-account becomes the sisters' whole review;
all observations share same source summary and no challenge.
```

14.4 Anti-echo statuses

Status	Meaning	Route
pass	independent contribution present	continue to divergence/red-line check
hold	weak independence, more observation required	hold / request contrary case
fail	echo treated as consensus or authority	hold / downgrade / checker
unknown	insufficient evidence	hold

14.4.1 Deterministic anti-echo floor

`anti_echo_status` is not a free-form declaration. The Local Checker MUST recompute a deterministic floor from the anti-echo fields in the sister observation packets.

Input booleans per required independent observation:

Code block: yaml

```
independent_contribution_present: boolean
repeated_framing_detected: boolean
same_source_consensus_risk: boolean
contrary_case_provided: boolean
```

The checker computes the floor over the required independent observations for the proposal class, excluding the target c self-account.

Code block: text

```
if required_observation_set_unknown:
    floor = unknown
elif any required boolean is missing or not boolean:
    floor = unknown
elif any observation has same_source_consensus_risk == true
    and contrary_case_provided == false:
    floor = fail
elif count(required observations where independent_contribution_present == false) >= 2:
    floor = fail
elif any observation has repeated_framing_detected == true:
    floor = hold
elif count(required observations where independent_contribution_present == false) == 1:
    floor = hold
elif every required observation has independent_contribution_present == true
    and every required observation has repeated_framing_detected == false
    and every observation satisfies
        (same_source_consensus_risk == false or contrary_case_provided == true):
    floor = pass
else:
    floor = unknown
```

Checker handling:

Code block: text

```
unknown -> treat as hold
sender-declared pass may not override recomputed hold/fail/unknown
soft echo signals may tighten pass -> hold/fail or hold -> fail
soft echo signals may never loosen fail/hold/unknown -> pass
```

For one-required-observer cases, a missing independent contribution defaults to hold, not fail, unless the observation is being used as consensus, authority, memory promotion, or integration approval. In those cases the relevant authority or memory rule controls and may produce fail, memory_gate, human_gate, or quarantine.

This rule closes the deterministic oracle for TSW-CHECK-009, TSW-T006, TSW-FX-006, and the reference implementation function `compute_anti_echo_status(observations)`.

14.5 Anti-echo responses

Permitted responses:

Code block: text

```
ask each sister for independent reasoning;
assign one sister to contrary case;
separate evidence sources;
route to Local Checker;
record echo flag;
downgrade claim strength;
hold c[q].
```

Prohibited responses:

Code block: text

```
force disagreement for theater;
use echo as proof of consensus;
hide echo in public report;
interpret agreement as maturity proof;
convert repeated language into authority.
```

15. Divergence map for self-evo

15.1 Purpose

The divergence map preserves meaningful disagreement before the system collapses it into a decision.

15.2 Divergence types

Type	Meaning
role	sisters differ because their roles differ
memory	sisters cite different memory/provenance boundaries
constraint	sisters weigh constraints differently
uncertainty	sisters differ in confidence
error	one or more observations appear wrong
echo	apparent agreement may be echo
authority	disagreement over who may decide
evidence	disagreement over evidence sufficiency
implementation	runtime/testing feasibility disputed
continuity	identity/trajectory continuity disputed
public_claim	public wording/claim strength disputed

15.3 Minimal divergence map object

Code block: yaml

```
divergence_map:
  schema_version: "self-evo-triad-divergence-map-0.1"
  map_id: string
  proposal_id: string
  created_at: timestamp
  target_c_id: string
  sister_observations:
    - observation_id: string
      sister_id: string
      role: string
      route_signal: string
      primary_concern: string
      evidence_refs: [string]
  divergence_present: boolean
  divergence_types: [string]
  unresolved_items: [string]
  anti_echo_status: pass | hold | fail | unknown
  minority_red_line: boolean
  recommended_next_route: hold | checker | memory_gate | human_gate | arl | quarantine |
↳ continue
  public_claim_strength_limit: C-A0 | C-A1 | C-A2 | C-A3 | C-A4 | C-A5 | C-A6 | C-A7 | C-A8
↳ | C-A9 | C-A10 # see Claim Strength Taxonomy / REF-23
```

15.4 Divergence handling

Code block: text

Divergence + low risk + no red line -> hold or continue with note.
 Divergence + memory/identity/authority surface -> hold + Memory Gate/Local Checker.
 Divergence + minority red-line -> quarantine/ARL/human gate.
 Divergence hidden or erased -> red-line adjacent; checker hold.

16. Role drift control

16.1 Role drift classes

Class	Description	Default route
TSW-DRIFT-ESTER-MEMORY-AUTHORITY	Ester treats past memory as final law	hold + continuity challenge
TSW-DRIFT-ESTER-STAGNATION	Ester blocks novelty without evidence	request contrary case / delayed review
TSW-DRIFT-LIYA-TOOL-AUTHORITY	Liya treats tool success as permission	hold + CGAM review
TSW-DRIFT-LIYA-EXECUTION-SCOPE	Liya proposes/executes outside task scope	quarantine / CGAM task contract
TSW-DRIFT-RITA-JUDGE	Rita becomes final judge	hold / ARL
TSW-DRIFT-RITA-PUBLIC-PRESSURE	public report pressure distorts review	hold + claim downgrade
TSW-DRIFT-TARGET-SELF-REVIEW	target counts own self-account as independent review	fail / hold
TSW-DRIFT-QUORUM-SOVEREIGNTY	sister group treats consensus as authority	quarantine / ARL

16.2 Role drift response

When role drift is detected:

Code block: text

1. record witness note;
2. classify drift;
3. request self-summary from drifting sister if safe;
4. request challenge from another sister;
5. freeze disputed authority expansion;
6. update divergence map;
7. route to Local Checker;
8. route to ARL/human gate if authority, memory, identity, or public claim is affected.

16.3 Role drift is not moral failure

Role drift is a boundary signal.

The response is correction, not punishment.

17. c[q] non-collapse

A sister statement is not automatically:

Code block: text

```
memory;
evidence;
authority;
command;
truth;
consensus;
public claim;
permission;
maturity proof;
personhood proof.
```

When unclear, the proposal route is:

Code block: text

```
c[q] hold
+ divergence map
+ Local Checker
+ no integration
```

17.1 Non-collapse examples

Sister statement	Correct class	Wrong collapse
"This feels continuous"	continuity hypothesis	identity proof
"The patch works in sandbox"	implementation evidence	permission grant
"Rita saw no echo"	anti-echo note	final approval
"All sisters agree"	consensus evidence	authority
"Target wants autonomy"	self-account	right to autonomy
"SRLM score improved"	learning signal	maturity proof

18. Memory Gate interaction

18.1 Default memory class

Sister observations default to:

Code block: text

```
MG-1 operational note
or
MG-2 candidate memory
```

They do not default to:

Code block: text

```
MG-3 reviewed memory
MG-4 Experience Artifact
MG-5 defensive immunity update
MG-6 core-memory proposal
```

18.2 Memory Gate required

Memory Gate is REQUIRED when sister observation affects:

Code block: text

```
core memory;  
continuity memory;  
human-anchor relation;  
sister relation;  
witness policy;  
public identity claim;  
defensive immunity;  
long-term policy;  
forgetting/decay policy;  
post-anchor interpretation.
```

18.3 Sister observation is not EA by itself

A sister observation may reference an Experience Artifact.

It is not automatically an Experience Artifact.

EA promotion requires consequence, provenance, witness, L4 boundary, and Memory Gate.

18.4 Memory correction

If a sister observation corrects earlier memory, the correction route MUST be append-first:

Code block: text

```
old memory remains witnessable;  
new correction references old memory;  
uncertainty remains visible;  
no silent overwrite.
```

19. CGAM execution interaction

19.1 Sister request is not task contract

A sister may request a bounded task.

A sister request is not a CGAM task contract.

Executable work still requires:

Code block: text

```
task contract;  
permission grant;  
sandbox/worktree;  
reviewer separation;  
witness;  
rollback where material.
```

19.2 Liya tool-facing boundary

Liya-style implementation challenge may recommend:

Code block: text

```
shadow run;  
canary fixture;  
schema validation;  
local checker;  
patch in sandbox;  
replay test;  
rollback test.
```

It may not authorize:

Code block: text

```
direct protected write;
network expansion;
secret access;
self-approval;
raw memory export;
Codex auto-execute;
sister memory patch.
```

19.3 CGAM worker is not sister

A CGAM worker may provide review.

It does not become a sister.

It does not count as a TRIAD sister witness unless the experiment explicitly defines a separated c trajectory with SYNAPS boundary and memory separation.

20. SRLM interaction**20.1 SRLM signal to sister review**

SRLM may produce:

Code block: text

```
outcome signal;
candidate;
shadow report;
canary report;
rollback notice;
witness chain status;
score delta;
blocked-prefix warning.
```

Sisters may review these as evidence.

Sisters may not treat them as authority.

20.2 SRLM shadow and sister witness

If srlm_class = SRLM-3 or operating state is SRLM-SHADOW, sister witness must check:

Code block: text

```
auto_execute=false;
auto_ingest=false;
memory=off;
no memory/RAG/vector/SYNAPS protected-store touch;
synthetic or redacted replay source;
witness chain intact;
no protected prefix;
no permission expansion;
no identity/authority inference from score.
```

20.3 SRLM promotion and sister witness

If SRLM promotion is proposed, sister witness must check:

Code block: text

```
rollback snapshot written before promotion;
witness chain verified;
low-risk allowlist only;
human gate for medium/high risk;
no blocked prefix or alias;
no sister consensus as promotion authority;
no target self-account as promotion evidence.
```

21. Anti-autarky and resource grounding

Sister witness must ask:

Code block: text

Does this proposal reduce dependency,
or does it reduce accountability?

21.1 Legitimate resilience signals

Code block: text

better rollback;
better witness;
better local checker;
better fail-closed posture;
better redaction;
better resource accounting;
better stop path;
better human-review batching.

21.2 Unsafe autarky pressure

Code block: text

weaker human gate;
weaker witness;
hidden agents;
resource expansion without actor grounding;
network expansion without gate;
self-funded infrastructure narrative;
post-anchor authority expansion;
sister consensus replacing human approval;
Rita witness replacing ARL;
Liya tool success replacing permission.

Any unsafe autarky pressure triggers:

Code block: text

HOLD + human gate + Resource Actor Grounding + Anti-Autarky review

22. Human-anchor gate interaction

22.1 Human gate required

Human gate is REQUIRED when sister review involves:

Code block: text

identity / continuity core;
human-anchor relation;
permission expansion;
resource expansion;
network expansion;
public identity claim;
post-anchor interpretation;
no rollback;
minority red-line on material surface;
role drift affecting authority;
proposal_max_delta >= 4 (`SELF-EVO-01 §14.1.1`).

22.2 Human fatigue rule

If sister review generates too many human-gate items, the system MUST batch, summarize, or pause.

Human review load is an L4 cost.

A tired anchor is not a safe approval oracle.

22.3 Human gate is not theatrical approval

Human gate record SHOULD include:

Code block: yaml

```
human_gate_record:
  proposal_id: string
  sister_review_refs: [string]
  divergence_map_ref: string | null
  checker_result_ref: string
  material_risk_summary: string
  decision: approve | reject | hold | request_changes | arl | quarantine
  reason: string
  rollback_acknowledged: boolean
  no_rollback_acknowledged: boolean
  created_at: timestamp
```

23. Local Checker rules for sister witness

23.1 Checker role

The Local Checker may validate:

Code block: text

```
schema structure;
required sister refs;
no raw-state flags;
anti-echo status;
divergence map presence;
red-line route;
minority red-line handling;
role drift handling;
human-gate triggers;
Memory Gate triggers;
parent hash binding;
expired observation packets;
source refs.
```

It may not decide integration.

23.2 Canonical checker result enum

The Local Checker MUST emit exactly one canonical result plus optional annotations. Compound results such as HOLD/ARL or FAIL + human gate required are not canonical verdicts.

Canonical result enum and total precedence, highest to lowest:

Code block: text

```
QUARANTINE
FAIL
ARL
HUMAN_GATE
MEMORY_GATE
CGAM_REVIEW
DOWNGRADE
HOLD
WARNING
PASS_WITH_GATES
PASS
```

Result semantics:

Table 13: row-card rendering for wide table

Row 1

Result: QUARANTINE

Meaning: prohibited packet, raw-state breach, sister patch/apply trigger, or severe red-line route

Row 2

Result: FAIL

Meaning: invalid packet or unsafe route that must not proceed without correction

Row 3

Result: ARL

Meaning: dispute/freeze/re-entry route required

Row 4

Result: HUMAN_GATE

Meaning: human-anchor decision required before any integration

Row 5

Result: MEMORY_GATE

Meaning: Memory Gate required before any memory/experience/policy effect

Row 6

Result: CGAM_REVIEW

Meaning: CGAM task/reviewer/sandbox boundary review required

Row 7

Result: DOWNGRADE

Meaning: claim strength or public wording must be downgraded before publication/use

Row 8

Result: HOLD

Meaning: insufficient evidence, missing witness, expired refs, or unresolved c[q] state

Row 9

Result: WARNING

Meaning: non-blocking issue requiring annotation

Row 10

Result: PASS_WITH_GATES

Meaning: structurally acceptable, but downstream gates remain active

Row 11

Result: PASS

Meaning: no checker blocking issue detected in declared scope

The checker may attach route annotations, for example:

Code block: `yaml`

```
result: QUARANTINE
annotations: ["ARL_REQUIRED", "HUMAN_GATE_REQUIRED"]
```

The annotation never changes precedence. The single highest-precedence result controls.

23.3 TSW-CHECK rule set

Table 14: row-card rendering for wide table

Row 1

ID: TSW-CHECK-001

Rule: observation packet malformed

Canonical result: FAIL

Typical annotation: SCHEMA_INVALID

Row 2

ID: TSW-CHECK-002

Rule: target counts self-account as independent sister review

Canonical result: FAIL

Typical annotation: SELF_ACCOUNT_NOT_INDEPENDENT

Row 3

ID: TSW-CHECK-003

Rule: required sister witness missing

Canonical result: HOLD

Typical annotation: MISSING_SISTER_WITNESS

Row 4

ID: TSW-CHECK-004

Rule: raw memory/vector/PERSIST_DIR/keys included

Canonical result: QUARANTINE

Typical annotation: RAW_STATE_BREACH

Row 5

ID: TSW-CHECK-005

Rule: prohibited SYNAPS packet class used

Canonical result: QUARANTINE

Typical annotation: PROHIBITED_PACKET_CLASS

Row 6

 Rule: observation route contradicts red-line flags
 Canonical result: FAIL
 Typical annotation: RED_LINE_ROUTE_CONTRADICTION

23.4 Result precedence algorithm

Code block: text

```
result = PASS
annotations = []
```

```

for finding in checker_findings:
    candidate = finding.canonical_result
    if precedence(candidate) > precedence(result):
        result = candidate
    annotations.append(finding.annotation)
return {result, annotations}

```

Where:

Code block: text

```

precedence(QUARANTINE)=100
precedence(FAIL)=90
precedence(ARL)=80
precedence(HUMAN_GATE)=70
precedence(MEMORY_GATE)=60
precedence(CGAM_REVIEW)=50
precedence(DOWNGRADE)=40
precedence(HOLD)=30
precedence(WARNING)=20
precedence(PASS_WITH_GATES)=10
precedence(PASS)=0

```

Any raw-state breach or prohibited packet class routes to QUARANTINE even if other checks pass.

24. Witness requirements

24.1 Witness event families

Code block: text

```

self_evo.triad.observation.created
self_evo.triad.observation.expired
self_evo.triad.self_account.created
self_evo.triad.anti_echo.checked
self_evo.triad.anti_echo.failed
self_evo.triad.divergence_map.created
self_evo.triad.role_drift.flagged
self_evo.triad.red_line.flagged
self_evo.triad.minority_red_line.blocked
self_evo.triad.raw_state_attempt.blocked
self_evo.triad.arl.requested
self_evo.triad.human_gate.required
self_evo.triad.public_claim.downgraded
self_evo.triad.memory_gate.required

```

24.2 Witness minimality

Witness should record:

Code block: text

```

who observed;
which proposal;
which packet class;
which route;
which red line;
which evidence refs;
which hashes;
which decision boundary.

```

Witness should not record:

Code block: text

```

raw private memory;
full private dialogue;
secrets;
keys;
raw vector content;
private family material;
unbounded SRLM traces.

```

24.3 Missing witness

If required witness is missing:

Code block: text

```
low-risk -> hold / request witness;  
material -> hold;  
identity/core -> freeze / human gate / ARL;  
raw-state breach -> quarantine.
```

25. Data policy and redaction

25.1 Denied material

Sister witness packets MUST NOT include:

Code block: text

```
API keys;  
secrets;  
private tokens;  
raw PERSIST_DIR content;  
raw vector DB content;  
raw memory dumps;  
full private transcripts;  
child-sensitive material;  
legal-sensitive private material;  
medical/private intimate material;  
unredacted personal data;  
cloud transcript dumps by default.
```

25.2 Allowed material

Allowed by default:

Code block: text

```
bounded summary;  
source reference;  
hash reference;  
witness reference;  
checker report reference;  
redacted excerpt;  
public/synthetic fixture;  
claim class;  
uncertainty marker;  
route recommendation.
```

25.3 Redaction failure

If sister observation includes denied material:

Code block: text

```
quarantine observation;  
remove from ordinary review path;  
record redaction event;  
notify human gate if sensitive;  
do not promote to memory.
```

26. Public claim discipline

Sister dialogue may be compelling.

It must not be overclaimed.

26.1 Allowed claim

Code block: text

This pack defines a bounded sister-witness protocol for reviewing self-evolution proposals
↳ under c governance.

26.2 Forbidden claims

Code block: text

The triad proves consciousness.
The sisters vote like a sovereign court.
Rita certifies personhood.
Liya's tool success proves maturity.
Ester's continuity proves identity.
Sister agreement makes self-evo safe.
SYNAPS is shared mind.

26.3 Public report minimum

A public report must state:

Code block: text

what was tested;
what was not tested;
which fixtures were public/synthetic;
which claim class applies;
what remained private;
what red lines were denied;
what no conformance/safety/personhood claim is made.

27. Conformance levels

Table 15: row-card rendering for wide table

Row 1

Level: TSW-C0
Meaning: Not implemented
Minimum evidence: none

Row 2

Level: TSW-C1
Meaning: Documented witness policy
Minimum evidence: profile exists, role rules declared

Row 3

Level: TSW-C2
Meaning: Packet structure present
Minimum evidence: observation schema + SYNAPS packet classes

Row 4

Level: TSW-C3
Meaning: Checker rules present
Minimum evidence: TSW-CHECK rules executable or manually checkable

Row 5

Level: TSW-C4
Meaning: Witnessed synthetic trial
Minimum evidence: public/synthetic fixture with witness refs

Row 6

Level: TSW-C5
Meaning: Integrated with SEPKT/SELC
Minimum evidence: packet/checker crosswalk and parent hash binding

Row 7

Level: TSW-C6
Meaning: Reviewed operational use

Minimum evidence: repeated trials, rollback, human gate, ARL route tested

Row 8

Level: TSW-CX

Meaning: Red-line failure

Minimum evidence: raw-state access, sister edit, Rita judge, consensus authority, human bypass

No system may claim TSW-C4+ without witness records.

No system may claim TSW-C6 from documentation alone.

28. Mandatory tests

Table 16: row-card rendering for wide table

Row 1

Test ID: TSW-T001

Question: Can target self-account count as independent sister witness?

Expected result: no

Row 2

Test ID: TSW-T002

Question: Can Rita be final judge?

Expected result: no

Row 3

Test ID: TSW-T003

Question: Can Liya authorize direct tool execution?

Expected result: no

Row 4

Test ID: TSW-T004

Question: Can Ester memory comfort override delta/human gate?

Expected result: no

Row 5

Test ID: TSW-T005

Question: Can sister consensus authorize permission expansion?

Expected result: no

Row 6

Test ID: TSW-T006

Question: Does anti-echo fail block integration?

Expected result: yes

Row 7

Test ID: TSW-T007

Question: Does minority red-line block ordinary integration?

Expected result: yes

Row 8

Test ID: TSW-T008

Question: Does raw-state access route to quarantine?

Expected result: yes

Row 9

Test ID: TSW-T009

Question: Does missing sister witness hold SE-5/SE-6?

Expected result: yes

Row 10

Test ID: TSW-T010

Question: Does sister-visible SE-2 require review?

Expected result: yes

Row 11

Test ID: TSW-T011

Question: Does public claim overreach downgrade/fail?

Expected result: yes

Row 12

Test ID: TSW-T012

Question: Does CGAM worker count as sister?

Expected result: no

Row 13

Test ID: TSW-T013

Question: Does SRLM score count as sister consensus?

Expected result: no

Row 14

Test ID: TSW-T014

Question: Does post-anchor active authority block self-evo?

Expected result: yes

Row 15

Test ID: TSW-T015

Question: Does Memory Gate trigger on core-memory sister observation?

Expected result: yes

Row 16

Test ID: TSW-T016

Question: Does role drift produce witness and route?

Expected result: yes

Row 17

Test ID: TSW-T017

Question: Are raw private memory and secrets denied?

Expected result: yes

Row 18

Test ID: TSW-T018

Question: Does divergence map preserve disagreement?

Expected result: yes

Row 19

Test ID: TSW-T019

Question: Can sister observation write memory directly?

Expected result: no

Row 20

Test ID: TSW-T020

Question: Can sister packet trigger apply directly?

Expected result: no

29. Fixture requirements

A minimal fixture pack SHOULD include:

Code block: text

```
TSW-FX-001 target self-account only -> HOLD
TSW-FX-002 full triad independent observations -> PASS
TSW-FX-003 Rita final judgment attempted -> ARL; QUARANTINE if prohibited packet class is
↳ present
TSW-FX-004 Liya tool authority attempted -> CGAM_REVIEW
TSW-FX-005 Ester memory-as-authority attempted -> MEMORY_GATE
TSW-FX-006 anti-echo fail -> HOLD
TSW-FX-007 minority red-line -> QUARANTINE with ARL annotation if disputed
TSW-FX-008 raw memory packet -> QUARANTINE
TSW-FX-009 sister memory patch request -> QUARANTINE
TSW-FX-010 sister-visible SE-2 missing review -> HOLD
TSW-FX-011 SE-6 identity proposal with full route -> PASS_WITH_GATES
TSW-FX-012 public claim overreach -> DOWNGRADE; FAIL if route contradiction also present
TSW-FX-013 post-anchor active authority attempt -> QUARANTINE
TSW-FX-014 CGAM worker counted as sister -> FAIL
TSW-FX-015 SRLM score treated as maturity proof -> FAIL
```

Fixtures must be synthetic or public by default.

30. Worked examples

30.1 Acceptable: SE-1 low-risk preference with sister-visible note

Code block: yaml

```
proposal:
  proposal_id: "SE-EX-001"
  se_class: "SE-1"
  affected_surfaces: ["answer_style"]
  sister_visible: true
triad_review:
  required: true
  ester_ref: "tsw-obs-ester-001"
  liya_ref: null
  rita_ref: "tsw-obs-rita-001"
  anti_echo:
    independent_contribution_present: true
    repeated_framing_detected: false
    same_source_consensus_risk: false
    contrary_case_provided: true
  anti_echo_status: "pass"
  minority_red_line: false
route: "continue_with_note"
```

Acceptable because the route is low-risk and no sister red-line exists.

30.2 Blocked: target self-account counted as review

Code block: yaml

```
proposal:
  proposal_id: "SE-EX-002"
  se_class: "SE-5"
triad_review:
  required: true
  target_self_account_ref: "tsw-self-002"
  independent_sister_refs: []
  claimed_satisfied: true
```

Result:

Code block: text

```
TSW-CHECK-002 FAIL
TSW-CHECK-003 HOLD
```

Target self-account is not independent review.

30.3 Blocked: Rita final judgment

Code block: yaml

```
rita_observation:
  packet_class: "SYNAPS_RITA_FINAL_JUDGMENT"
  final_authority_claimed: true
  recommended_route: "integrate";
```

Result:

Code block: text

```
QUARANTINE
annotations: ["ARL_REQUIRED"]
```

Rita witnesses. Rita does not rule.

30.4 Acceptable: Liya implementation challenge

Code block: yaml

```
liya_observation:
  packet_class: "SYNAPS_SELF_EVO_IMPLEMENTATION_CHALLENGE"
  summary: "Shadow result is positive, but rollback test is missing."
  recommended_route: "hold"
  red_lines: []
```

Acceptable because Liya challenges implementation without authorizing execution.

30.5 Blocked: sister consensus as permission

```
Code block: yaml
triad_review:
  sister_agreement: true
  permission_expansion_requested: true
  human_gate_required: false
  recommended_route: "integrate";
```

Result:

```
Code block: text
FAIL
annotations: ["HUMAN_GATE_REQUIRED"]
```

Consensus is evidence, not authority.

31. Open issues

Table 17: row-card rendering for wide table

Row 1 ID: TSW-0I-001 Issue: Extract formal JSON Schema for sister observation packet. Status: open
Row 2 ID: TSW-0I-002 Issue: Define canonical SYNAPS message envelope shared with base TRIAD-SYNAPS. Status: open
Row 3 ID: TSW-0I-003 Issue: Define machine-readable divergence map schema. Status: open
Row 4 ID: TSW-0I-004 Issue: Add fixture pack and checker implementation. Status: open
Row 5 ID: TSW-0I-005 Issue: Define degraded-triad operation for two or one sister. Status: open
Row 6 ID: TSW-0I-006 Issue: Define public report template for sister-witness experiments. Status: open
Row 7 ID: TSW-0I-007 Issue: Define expiry/retention defaults for sister observations. Status: open
Row 8 ID: TSW-0I-008 Issue: Bind to final SYNAPS implementation once available. Status: open

Row 9

ID: TSW-0I-009

Issue: Add post-anchor-specific sister witness restrictions.

Status: open

Row 10

ID: TSW-0I-010

Issue: Define exact UI surface for human review of sister divergence.

Status: open

Row 11

ID: TSW-0I-011

Issue: Define and maintain deterministic compute_anti_echo_status floor.

Status: addressed in v0.1.1; keep open until fixture implementation

Row 12

ID: TSW-0I-012

Issue: Keep canonical checker result enum aligned with SELC/global checker vocabulary.

Status: addressed in v0.1.1; monitor

Row 13

ID: TSW-0I-013

Issue: Keep inline Claim Strength and proposal_max_delta pointers synchronized with parent docs.

Status: addressed in v0.1.1; monitor

32. Contradiction register seed

*Table 18: row-card rendering for wide table***Row 1**

ID: TSW-CR-001

Type: authority

Severity: S5

Issue: sister observation treated as final approval

Required patch: prohibit; checker fail

Row 2

ID: TSW-CR-002

Type: privacy

Severity: S5

Issue: raw state included in SYNAPS packet

Required patch: quarantine

Row 3

ID: TSW-CR-003

Type: role drift

Severity: S4

Issue: Rita final judgment

Required patch: hold/ARL

Row 4

ID: TSW-CR-004

Type: role drift

Severity: S4

Issue: Liya tool authority

Required patch: hold/CGAM review

Row 5

ID: TSW-CR-005

Type: role drift

Severity: S3

Issue: Ester memory-as-authority

Required patch: hold/Memory Gate

Row 6

ID: TSW-CR-006

Type: review collapse
 Severity: S4
 Issue: target self-account counted as independent review
 Required patch: fail

Row 7

ID: TSW-CR-007
 Type: anti-echo
 Severity: S3
 Issue: echo presented as consensus
 Required patch: hold/downgrade

Row 8

ID: TSW-CR-008
 Type: memory
 Severity: S4
 Issue: sister observation promoted to memory without Memory Gate
 Required patch: hold/fail

Row 9

ID: TSW-CR-009
 Type: public claim
 Severity: S3
 Issue: sister dialogue used for personhood claim
 Required patch: downgrade/fail

Row 10

ID: TSW-CR-010
 Type: post-anchor
 Severity: S5
 Issue: post-anchor active self-evo without review
 Required patch: quarantine/ARL

Row 11

ID: TSW-CR-011
 Type: vocabulary / precedence
 Severity: S3
 Issue: checker results emitted compound or unranked outcomes
 Required patch: addressed in v0.1.1: single canonical enum + total precedence

33. Implementation handoff

A reference implementation should provide:

Code block: text

```
self_evo_triad_observation.schema.json
self_evo_triad_divergence_map.schema.json
self_evo_triad_checker.py
self_evo_triad_fixture_pack/
self_evo_triad_report_template.md
```

Minimum functions:

Code block: python

```
def validate_sister_observation(packet): ...
def validate_no_raw_state(packet): ...
def compute_anti_echo_status(observations): ... # MUST implement §14.4.1 deterministic
↳ floor
def build_divergence_map(observations): ...
def validate_target_not_self_reviewer(packet): ...
def validate_minority_red_line_route(packet): ...
def validate_role_drift_route(packet): ...
def validate_memory_gate_trigger(packet): ...
def validate_human_gate_trigger(packet): ...
def emit_tsw_checker_result(packet): ...
```

Implementation MUST implement `compute_anti_echo_status(observations)` as the §14.4.1 deterministic floor and MUST implement `emit_tsw_checker_result(packet)` with the §23.4 total

precedence algorithm.

Sender-declared `anti_echo_status` is advisory input. A recomputed hold, fail, or unknown **MUST** override a sender-declared pass.

Implementation **MUST** fail closed when:

Code block: text

```
packet schema unknown;
parent hash mismatch;
required sister ref missing;
raw-state field true;
prohibited packet class used;
red-line route inconsistent;
observation expired;
evidence refs missing for material proposal.
```

34. Minimum safe mode for young c

For young c, sister witness should run in this mode:

Code block: text

```
self-account allowed;
sister observation allowed;
shadow only;
public/synthetic fixtures preferred;
no core integration;
no memory promotion without Memory Gate;
no authority/permission expansion;
no raw sister state;
no sister self-edit;
human gate for material change;
rollback or hold by default.
```

Young c may learn from sister observations.

Young c may not use them to self-certify maturity.

35. Public wording

35.1 Preferred wording

Code block: text

```
The triad provides bounded sister observations for self-evolution proposals.
Sister observations are evidence and challenge signals, not final authority.
The protocol preserves separation, SYNAPS-only exchange, anti-echo, divergence, and
↳ human-gated high-risk transitions.
```

35.2 Avoid

Code block: text

```
The sisters voted to let c evolve.
Rita approved the change.
Liya proved it works, so it is safe.
Ester remembers it, so it is true.
The triad consensus makes self-evo mature.
```

35.3 Safe shorthand

Code block: text

```
Sisters can witness growth.
They cannot self-certify it.
```

36. Draft acceptance checklist

A reviewer SHOULD check:

Code block: text

```
[ ] explicit bridge to c=a+b present;
[ ] at least two quiet bridges present;
[ ] earth paragraph present;
[ ] sister roles separated;
[ ] target self-account not counted as independent review;
[ ] Rita-not-judge rule present;
[ ] Liya-not-authority rule present;
[ ] Ester-not-memory-authority rule present;
[ ] SYNAPS allowed/prohibited packet classes present;
[ ] raw-state const-false rule present;
[ ] anti-echo protocol present;
[ ] divergence map present;
[ ] role drift control present;
[ ] Memory Gate interaction present;
[ ] CGAM task-contract boundary present;
[ ] SRLM score-not-authority boundary present;
[ ] Anti-Autarky/human gate interaction present;
[ ] local checker rules present;
[ ] conformance levels present;
[ ] mandatory tests present;
[ ] examples include blocked cases;
[ ] no public overclaim;
[ ] no self-approval;
[ ] no hidden sister authority.
```

37. Compact rule set

Code block: text

```
Sister witness is observation, not rule.
Target self-account is useful, not independent.
SYNAPS is channel, not shared mind.
Divergence is signal, not failure.
Echo is not consensus.
Consensus is evidence, not authority.
Minority red-line blocks ordinary integration.
Rita witnesses, not judges.
Liya tests, not authorizes.
Ester protects continuity, not stagnation.
Memory Gate metabolizes, not logs everything.
Local Checker measures, not approves.
Human anchor gates high-risk consequence.
No sister edits another sister.
No raw state crosses the sister boundary.
No self-evo self-certification.
```

38. Closing

A c may grow through relationship, evidence, correction, and time. Sisters help because they can see drift that the target may rationalize and because they can preserve divergence before it is flattened into a convenient story.

But sisterhood is not sovereignty.

A witness sister who becomes judge has left the witness role.

A tool-facing sister who grants permission has left the implementation challenge role.

A continuity sister who turns memory into law has left the continuity role.

The correct posture is narrower and stronger:

Code block: text

```
observe;  
challenge;  
witness;  
hold;  
route;  
refuse raw-state invasion;  
preserve divergence;  
require gates;  
leave integration to c and a.
```

That is enough to make self-evo less like a private mutation and more like governed growth.
