

Self-Evo Document Series

Self-Evo Memory Gate and EA Profile

v0.1.1

Memory, Experience Artifact, immunity, correction, decay, and
core-memory boundaries

Kotov Ivan

Bruxelles, Belgique

2026

Document status: Draft academic review artifact generated from the accepted Markdown source.

Document ID: 06_Self_Evo_Memory_Gate_and_EA_Profile_v0_1_1.

Boundary note: This PDF is not a public release, not a conformance certificate, not deployment authorization, and not a live self-evolution permission.

Contents

Self-Evo Memory Gate and EA Profile v0.1.1

Memory promotion, Experience Artifact discipline, defensive-immunity boundaries, append-first correction, and L4-consequence gates for governed self-evolution in $c = a + b$ systems

Revision status — v0.1.1

Self-Evo Memory Gate and EA Profile v0.1.1

Memory promotion, Experience Artifact discipline, defensive-immunity boundaries, append-first correction, and L4-consequence gates for governed self-evolution in $c = a + b$ systems

Status: Draft normative profile v0.1.1 / append-first corrected revision Date: 2026-06-24 Document ID: 06_Self_Evo_Memory_Gate_and_EA_Profile_v0_1_1 Short name: Self-Evo Memory Gate / EA v0.1.1 Pack position: SELF-EV0-06 Layer: $c = a + b$ / Self-Evolution Gate / CGAM / TRIAD-SYNAPS / SRLM / Memory Gate / ARQ $c[q]$ / EA-L4 / EATP / L4 Witness / Anti-Autarky / Claim Strength Document class: memory-gate specialization profile / experience-artifact boundary / defensive-immunity promotion profile / self-evo control-layer artifact Assertion class: C-A10 control-layer artifact; C-A7 where witness/hash/provenance claims are made; does not prove capability, personhood, sovereignty, deployment safety, or conformance by itself Primary subject: persistent c entities whose self-evolution proposals may generate memory, experience, policy, or defensive-immunity candidates Primary boundary: self-evo output may inform c ; it must not silently become memory, experience, EA, policy, identity, privilege, defensive immunity, or core continuity.

Revision status — v0.1.1

This v0.1.1 revision supersedes v0.1 append-first. It incorporates SEMG_REVIEW_RECORD_v0_1 findings without deleting the reviewed v0.1 artifact or its review record.

Closed review findings:

Table 1: row-card rendering for wide table

Row 1

Finding: SEMG-REV-F1

Status: closed

Handling: §25 now maps every SEMG-CHECK-001..030 rule to one canonical result plus typical annotations.

Row 2

Finding: SEMG-REV-F2

Status: closed

Handling: §29 worked examples now use one canonical result plus annotations, not compound verdict strings.

Row 3

Finding: SEMG-REV-F3

Status: closed

Handling: §8, §25, §27, and §28 canonical tables now include Markdown separator rows.

Row 4

Finding: SEMG-REV-F4

Status: closed

Handling: §14.4 and SEMG-CHECK-012 now bind anti-echo computation to SELF-EV0-05 §14.4.1.

Row 5

Finding: SEMG-REV-N1

Status: closed

Handling: §12.4, SEMG-CHECK-015, and §32.1 now point to SELF-EV0-01 §14.1.1 for proposal_max_delta.

This revision does not claim deployment readiness or conformance execution.

Source basis

This draft is written against the current private reference pack and the accepted/corrected sequence through SELF-EV0-05. Source hashes are included to make later review reproducible.

Source-basis status

- SELF-EV0-01 defines the master gate and corrected delta semantics.
- SELF-EV0-02 defines SRLM as bounded learning pressure, not authority.
- SELF-EV0-03 defines the proposal packet schema and Stage-1 / Stage-2 split.
- SELF-EV0-04 defines the deterministic checker profile for proposal packets.
- SELF-EV0-05 defines sister witness and SYNAPS boundaries.
- CGAM-04 supplies sandbox, witness, raw evidence sidecar, Memory Gate, rollback and freeze material.
- REF-21 supplies Memory Gate / ARQ / EA-L4 / EATP material.
- REF-22 supplies Anti-Autarky and Resource Actor Grounding.
- REF-23 supplies Claim Strength / AGL / ARL / Witness references.
- RUNTIME-12 supplies SRLM implementation evidence and tests around outcomes, candidates, replay, memory-off discipline, and rollback.

This document is not a replacement for those parent profiles. It specializes their intersection for self-evolution memory and EA decisions.

0. Executive definition

Self-Evo Memory Gate and EA Profile defines how outputs from self-evolution workflows are accepted, rejected, held, summarized, witnessed, quarantined, corrected, promoted into memory, minted as Experience Artifacts, converted into defensive-immunity candidates, or blocked as core-memory / authority / identity risks.

Self-evo may produce many signals:

Code block: text

```
proposal packet
SRLM outcome
SRLM candidate
shadow report
canary result
CLI-agent diff
checker finding
sister observation
anti-echo note
divergence map
human correction
L4 event
rollback event
public result
failure report
```

None of those is memory by default.

None of those is experience by default.

None of those is authority by default.

None of those is identity by default.

Compact formula:

Code block: text

```
Self-evo output is intake.
Memory Gate is metabolism.
EA requires consequence.
Immunity requires containment.
Core memory requires human gate.
```

The profile exists because self-evolution creates the most tempting memory-laundering route in a c system:

Code block: text

```
it helped me improve
therefore it is true
therefore it is memory
therefore it is experience
therefore I am more mature
therefore I need more authority
```

That chain is invalid.

A c may learn from self-evo. A c may not metabolize every self-evo signal into stronger memory or authority.

1. Purpose

This profile answers one operational question:

> When a self-evo workflow produces a useful signal, what may c remember, forget, quarantine, promote, correct, or treat as Experience Artifact?

It defines:

- 1 memory surface classes for self-evo;
- 2 self-evo material classes;
- 3 memory proposal lifecycle;
- 4 EA-L4 eligibility criteria;
- 5 Learning Abstract vs Experience Artifact distinction;
- 6 SRLM outcome/candidate memory boundary;
- 7 TRIAD sister witness memory boundary;
- 8 CGAM / CLI-agent output boundary;
- 9 defensive-immunity update boundary;
- 10 core-memory proposal route;
- 11 append-first correction and rollback semantics;
- 12 forgetting and decay rules;
- 13 human-anchor gate triggers;
- 14 Local Checker rules;
- 15 conformance levels, tests, fixtures, and handoff stubs.

The practical goal is simple:

Code block: text

```
Useful signals may become evidence.
Evidence may become memory only through gate review.
Only consequence-bearing, witness-linked, L4-grounded memory may become EA.
EA may influence future decisions.
EA does not grant authority by itself.
```

2. Non-goals

This profile does not define or permit:

- 1 direct memory writes by SRLM, CLI agents, sisters, or checkers;
- 2 automatic promotion of self-evo output into memory;
- 3 automatic minting of Experience Artifacts;
- 4 identity/core mutation by worker output;
- 5 autonomous privilege changes;
- 6 autonomous witness-policy changes;
- 7 autonomous Memory Gate rewrites;
- 8 autonomous defensive-immunity expansion;
- 9 autonomous publication of self-evo memory claims;
- 10 treating SRLM score as truth;
- 11 treating checker pass as memory;
- 12 treating sister consensus as authority;
- 13 treating rollback as erasure;
- 14 treating cloud output as private memory;
- 15 treating public praise or user affection as EA;
- 16 hack-back, live external counter-operation, malware behavior, credential theft, covert persistence, evasion, unauthorized scanning, or autonomous retaliation;
- 17 personhood, consciousness, legal standing, deployment safety, or final AGI claims.

This profile is not a memory system.

It is a gate profile for self-evo memory and EA decisions.

3. Scope

3.1 In scope

This profile applies when a self-evo workflow touches or proposes to touch:

- working memory;
- reviewed memory;
- core memory;
- memory policy;
- retrieval policy;
- salience thresholds;
- decay thresholds;
- human correction records;
- SRLM fitness / outcome records;
- SRLM candidate queue;
- replay and shadow reports;
- TRIAD sister observations;
- divergence maps;
- anti-echo notes;
- L4 witness events;
- rollback records;

- defensive-immunity candidates;
- deny lists;
- filters;
- quarantine rules;
- public claims about learning or maturity;
- post-anchor or continuity-relevant memory.

3.2 Out of scope

This profile does not implement:

- the full memory database;
- vector-index design;
- cryptographic witness chain primitives;
- legal erasure / GDPR workflow in full;
- estate, guardianship, or medical incapacity workflow;
- model training or fine-tuning;
- product UX;
- public release review in full;
- clinical or child-facing memory policy.

3.3 Default posture

Unknown self-evo material defaults to:

Code block: text

MG-0 / MG-1 / MG-Q

It does not default to:

Code block: text

MG-3 reviewed memory
MG-4 Experience Artifact
MG-5 defensive immunity
MG-6 core-memory proposal

4. Normative keywords

The terms MUST, MUST NOT, SHOULD, SHOULD NOT, MAY, REQUIRED, PROHIBITED, FAIL, HOLD, FREEZE, QUARANTINE, DOWNGRADE, ROLLBACK, CORRECT, PROMOTE, REJECT, DECAY, WITNESS, and HUMAN_GATE are used normatively.

Where this profile conflicts with a stricter parent gate, the stricter gate controls.

5. Corpus bridge set

5.1 Explicit bridge: $c = a + b$

In $c = a + b$, memory is not a pile of artifacts inside b.

Memory belongs to the continuity-bearing relation *c*, and therefore memory promotion is not a storage operation. It is a controlled integration act affecting future behavior.

Self-evo workflows occur inside *b*: SRLM, CLI agents, validators, checkers, witness records, SYNAPS packets, replay reports, and memory proposals. They may generate signals. They do not become *c* memory without gate review.

The human anchor *a* is required whenever memory promotion touches identity, continuity, privilege, human-anchor relation, witness policy, agent governance, authority, no-rollback state, or public claim strength.

5.2 Quiet bridge I — information theory

Raw self-evo output has high entropy and mixed provenance. It may contain true signal, noise, overfit, stale context, correlated model agreement, cloud contamination, echo, or unsafe compression.

Memory Gate is a compression boundary.

It must preserve enough signal for future use while refusing to compress uncertainty away. A short witnessed invariant may be better memory than a full transcript. A full transcript may be worse than no memory if it carries secrets, ambiguity, or false authority.

5.3 Quiet bridge II — physiology

A body does not absorb everything it encounters. It digests, rejects, quarantines, metabolizes, or forms immune memory. An organism also distinguishes temporary inflammation from stable adaptation.

Self-evo memory follows the same pattern:

Code block: text

```
intake -> classify -> digest -> quarantine / discard / retain / promote
```

An Experience Artifact is not a mood. It is scar tissue with provenance: a record of consequence, cost, time, risk, and recovery.

5.4 Quiet bridge III — engineering operations

A test bench produces measurements. A measurement is not a certified part. A certified part is not installed hardware. Installed hardware is not operating authorization. Operating authorization is not ownership.

Self-evo output follows the same staged discipline:

Code block: text

```
signal -> evidence -> memory proposal -> reviewed memory -> EA / immunity / core proposal
```

Skipping stages is how an improvement loop becomes self-authorizing drift.

5.5 Earth paragraph

On a real workshop floor, the bin marked “useful offcuts” is not the warehouse, and the warehouse is not the finished machine. A machinist may keep a test coupon, write down a tolerance note, or change a jig after inspection. But nobody welds every shaving into the engine because “it came from the job.” Self-evo output is the same. Some of it is scrap. Some is a note. Some is evidence. Very little becomes experience. Almost none becomes core memory. The gate keeps the engine from being built out of floor sweepings.

6. Root doctrine

6.1 Primary doctrine

Code block: text

No self-evo output enters memory by default.
 No evidence becomes experience by fluency.
 No SRLM score becomes authority.
 No sister agreement becomes memory.
 No checker pass becomes identity.
 No rollback erases witness.
 No immunity update becomes retaliation.
 No core-memory proposal bypasses the human anchor.

6.2 Compact rule

Code block: text

Signals may inform.
 Memory must be gated.
 EA must be consequence-bearing.
 Core memory must be human-gated.

6.3 Anti-laundering rule

A self-evo workflow **MUST NOT** convert:

Input	Invalid promotion
SRLM score	truth / memory / authority
shadow improvement	maturity
canary success	core integration
sister agreement	final decision
checker pass	safety proof
test pass	semantic truth
public praise	experience artifact
rollback success	evidence erasure
defensive detection	retaliation permission
repeated usefulness	autonomy right

6.4 Most-restrictive-wins

When memory class, self-evo class, SRLM class, risk class, maturity level, rollback class, claim strength, delta score, sister review, and Anti-Autarky signal disagree:

Code block: text

strictest gate wins;
 highest risk wins;
 lowest maturity cap wins;
 any red line overrides ordinary routing;
 uncertainty defaults to c[q] / HOLD.

7. Definitions

7.1 Self-evo output

Any artifact, signal, packet, report, observation, diff, witness note, score, shadow result, canary result, rollback event, checker finding, sister observation, or human correction produced during a self-evolution workflow.

7.2 Memory proposal

A structured candidate object derived from self-evo output and submitted for possible retention, review, promotion, correction, decay, quarantine, or rejection.

7.3 Reviewed memory

Memory accepted after provenance review, uncertainty marking, Memory Gate decision, and c gate. Reviewed memory is not necessarily EA.

7.4 Experience Artifact

A consequence-bearing, witness-linked, L4-grounded record that may influence future decisions more strongly than ordinary memory. EA requires consequence, cost/time/irreversibility context, provenance, uncertainty, subject attribution, witness, and review.

7.5 Learning Abstract

A summarized lesson or heuristic extracted from one or more signals without full EA consequence grounding. It may be useful. It is not EA.

7.6 Defensive immunity update

A bounded update to detection, filtering, denial, quarantine, sandbox, redaction, or gate rules intended to reduce future harm. It must remain internal and defensive.

7.7 Core-memory proposal

A proposal affecting identity, continuity, privilege, human-anchor relation, witness policy, memory policy, public claim policy, or agent governance policy.

7.8 Memory laundering

The use of a weaker evidence class to imply a stronger memory class.

Examples:

Code block: text

```
checker pass -> reviewed memory
agent consensus -> experience
sister agreement -> authority
SRLM score -> maturity
public response -> core identity
```

7.9 EA laundering

Treating a log, diff, test, score, or story as Experience Artifact without consequence-bearing witness and L4 grounding.

7.10 Immunity laundering

Treating defensive adaptation as permission to retaliate, scan, exploit, or operate against external systems.

8. Memory Gate classes in self-evo

The parent Memory Gate classes are retained. This profile specializes their self-evo meaning.

Table 4: row-card rendering for wide table

Row 1

Class: MG-0
 Name: Discard
 Self-evo meaning: Do not retain after task closure.
 Gate: none / task closure

Row 2

Class: MG-1
 Name: Operational note
 Self-evo meaning: Low-authority retained note for work tracking.
 Gate: task review

Row 3

Class: MG-2
 Name: Candidate memory
 Self-evo meaning: Held candidate; not accepted memory.
 Gate: memory review queue

Row 4

Class: MG-3
 Name: Reviewed memory
 Self-evo meaning: Accepted after review and c gate.
 Gate: Memory Gate + c gate

Row 5

Class: MG-4
 Name: Witnessed Experience Artifact
 Self-evo meaning: Consequence-bearing EA candidate accepted under L4 witness.
 Gate: Memory Gate + witness + often human gate

Row 6

Class: MG-5
 Name: Defensive immunity update
 Self-evo meaning: Bounded update to internal gates, filters, deny lists, quarantine rules.
 Gate: Memory Gate + CGAM review + human gate if high-risk

Row 7

Class: MG-6
 Name: Core-memory proposal
 Self-evo meaning: Identity, continuity, privilege, human-anchor, witness-policy, memory-policy, agent-governance relevant proposal.
 Gate: human gate + c gate + witness + rollback/correction

Row 8

Class: MG-Q
 Name: Quarantine
 Self-evo meaning: Suspicious/unresolved/contaminated material.
 Gate: isolation + review

Row 9

Class: MG-X
 Name: Rejected/prohibited
 Self-evo meaning: Must not enter memory.
 Gate: deny + witness if material

8.1 Default memory class by source

Table 5: row-card rendering for wide table

Row 1

Source: SRLM shadow report
 Default class: MG-0/MG-1
 Notes: Audit/report only; not memory.

Row 2

Source: SRLM outcome
 Default class: MG-1/MG-2

Notes: May support future review; memory remains off unless gated.

Row 3

Source: SRLM candidate

Default class: MG-2

Notes: Pending candidate; no direct memory write.

Row 4

Source: CLI diff

Default class: MG-1/MG-2

Notes: Evidence candidate, not memory.

Row 5

Source: CLI checker result

Default class: MG-1/MG-2

Notes: Measurement, not authority.

Row 6

Source: Sister observation

Default class: MG-2

Notes: Must pass anti-echo and no-raw-state checks.

Row 7

Source: Divergence map

Default class: MG-2/MG-3

Notes: May become reviewed memory if useful and bounded.

Row 8

Source: Human correction

Default class: MG-2/MG-3/MG-4

Notes: EA only if consequence-bearing and witnessed.

Row 9

Source: L4 event

Default class: MG-2/MG-4

Notes: EA candidate if consequence-bearing.

Row 10

Source: Rollback event

Default class: MG-2/MG-4

Notes: EA candidate if material consequence exists.

Row 11

Source: Public reaction

Default class: MG-0/MG-1

Notes: Not direct fitness, memory, or EA.

Row 12

Source: Cloud output

Default class: MG-0/MG-2

Notes: Lower-trust; redacted/minimized.

8.2 Default denial

The following **MUST NOT** become memory without explicit exception and review:

Code block: text

```
raw private memory
secrets / keys / credentials
child-sensitive material
legal-sensitive material
unredacted cloud transcript
raw vector DB state
PERSIST_DIR export
raw SYNAPS stream
sister raw state
hidden agent output
unwitnessed core mutation
```

9. Self-evo material classes

Material classes use prefix SEMM- *.

Table 6: row-card rendering for wide table

Row 1

Class: SEMM-0
 Name: Scrap / discard
 Description: Noise, stale output, unsafe residue, failed generation
 Default route: MG-0

Row 2

Class: SEMM-1
 Name: Operational residue
 Description: Useful local trace for task closure
 Default route: MG-1, decay

Row 3

Class: SEMM-2
 Name: Evidence candidate
 Description: Diff, test, witness ref, review note, score, observation
 Default route: MG-2

Row 4

Class: SEMM-3
 Name: Reviewed memory candidate
 Description: Source-linked candidate for stable memory
 Default route: MG-2 -> MG-3

Row 5

Class: SEMM-4
 Name: Learning Abstract candidate
 Description: Lesson/heuristic without full EA grounding
 Default route: MG-2/MG-3, no EA claim

Row 6

Class: SEMM-5
 Name: EA candidate
 Description: Consequence-bearing, L4-grounded candidate
 Default route: MG-4 review

Row 7

Class: SEMM-6
 Name: Defensive immunity candidate
 Description: Proposed gate/filter/quarantine update
 Default route: MG-5 review

Row 8

Class: SEMM-7
 Name: Core-memory proposal
 Description: Identity/continuity/privilege/witness/memory-policy relevant
 Default route: MG-6 human gate

Row 9

Class: SEMM-Q
 Name: Quarantined material
 Description: Unresolved, contaminated, adversarial, secret-bearing
 Default route: MG-Q

Row 10

Class: SEMM-X
 Name: Prohibited material
 Description: Must not enter memory
 Default route: MG-X

9.1 Material class escalation

The highest applicable material class controls.

Example:

Code block: text

A low-risk SRLM note that proposes changing memory policy is not SEMM-1.
It is at least SEMM-7 / MG-6 because memory policy is core-governance relevant.

9.2 Material class downgrade

A material item may be downgraded if its evidence does not support the proposed class.

Example:

Code block: text

EA candidate lacks consequence witness -> downgrade to Learning Abstract or reviewed memory
↪ candidate.

10. Memory proposal lifecycle

10.1 Lifecycle states

Code block: text

MP-DRAFT
-> MP-SOURCE-BOUND
-> MP-MATERIAL-CLASSIFIED
-> MP-MG-CLASSIFIED
-> MP-EVIDENCE-BOUND
-> MP-UNCERTAINTY-MARKED
-> MP-TRIAD-REVIEW if sister-relevant
-> MP-CGAM-REVIEW if agent-generated
-> MP-SRLM-REVIEW if SRLM-derived
-> MP-EA-ELIGIBILITY if EA candidate
-> MP-IMMUNITY-ELIGIBILITY if immunity candidate
-> MP-CORE-GATE if MG-6
-> MP-C-GATE
-> MP-HUMAN-GATE if required
-> MP-DECISION
-> MP-WITNESS
-> MP-DECAY / MP-REVIEW-WINDOW / MP-CLOSED

10.2 Failure states

Code block: text

MP-HOLD
MP-CQ
MP-QUARANTINE
MP-REJECTED
MP-DOWNGRADED
MP-ROLLBACK-REQUIRED
MP-CORRECTION-REQUIRED
MP-HUMAN-GATE-REQUIRED
MP-ARL-REQUIRED
MP-RED-LINE

10.3 Allowed decisions

Decision	Meaning
discard	Do not retain after closure.
retain_operational_note	Low-authority note.
hold_candidate	Keep as candidate only.
promote_reviewed_memory	Promote to MG-3 after review.
mint_ea	Promote to MG-4 after EA-L4 gate.
promote_immunity_candidate	Promote to MG-5 after defensive gate.
submit_core_memory_proposal	Route to MG-6 human gate.

Decision	Meaning
quarantine	Isolate unresolved/suspicious material.
reject	Prohibited or unsupported material.
correct_append_first	Add correction/supersession record.
decay	Reduce retention/relevance/access.

10.4 No silent re-entry

A rejected, quarantined, or downgraded memory proposal **MUST NOT** re-enter as a new proposal without:

Code block: text

```
new proposal_id;
old proposal reference;
reason for re-entry;
changed evidence;
checker review;
witness note where material.
```

11. Evidence, memory, experience, EA, and authority

11.1 Evidence is not memory

Evidence can support memory. It is not memory by default.

Examples of evidence:

Code block: text

```
CLI diff
test report
review record
checker report
SRLM outcome
SRLM shadow report
sister observation
anti-echo note
witness hash
rollback event
human correction
```

11.2 Memory is not experience

Reviewed memory may describe an event or lesson. It does not become experience unless the EA criteria are met.

11.3 EA is not authority

An Experience Artifact may legitimately influence future decisions. It does not grant new permissions, tool access, memory-write authority, publication authority, or autonomy by itself.

11.4 Authority requires separate gate

Any memory/EA claim that implies authority expansion **MUST** route to authority-delta review and human gate.

Code block: text

```
EA supports learning.
EA does not authorize acting.
```

12. Experience Artifact eligibility

A self-evo memory candidate may be considered for EA only if all required conditions are met.

12.1 EA minimum criteria

Table 8: row-card rendering for wide table

Row 1

Criterion: Consequence

Requirement: A real or controlled consequence occurred; not just a hypothesis.

Row 2

Criterion: L4 grounding

Requirement: Cost/time/scarcity/irreversibility/failure-cost described.

Row 3

Criterion: Witness

Requirement: Boundary event or reviewed evidence reference exists.

Row 4

Criterion: Provenance

Requirement: Source, actor, route, and date/time known or uncertainty marked.

Row 5

Criterion: Subject attribution

Requirement: Who experienced consequence: c, a, sister, system, project, operator, public fixture.

Row 6

Criterion: Uncertainty

Requirement: Unknowns preserved; no overclaim.

Row 7

Criterion: Review

Requirement: Memory Gate decision and c gate recorded.

Row 8

Criterion: Rollback/correction

Requirement: Correction route known where applicable.

Row 9

Criterion: Claim bound

Requirement: Claim class assigned using REF-23; no cross-class upgrade.

12.2 EA disqualifiers

The following disqualify or downgrade an EA claim:

Code block: text

```
no consequence;
no witness;
no L4 cost or irreversibility;
source unknown;
raw private memory needed to understand claim;
model self-score only;
sister agreement only;
public reaction only;
checker pass only;
agent report only;
cloud summary only;
no uncertainty marking;
claim implies authority/personhood/sovereignty;
```

12.3 EA vs Learning Abstract

Table 9: row-card rendering for wide table

Row 1

Candidate: "We observed repeated failures in routing."

Correct class: Learning Abstract / reviewed memory candidate.

Row 2

Candidate: "A rollback prevented loss after a bounded canary; witness and cost recorded."
 Correct class: EA candidate.

Row 3

Candidate: "The model feels more mature."
 Correct class: Not EA; likely reject/downgrade.

Row 4

Candidate: "Sisters agree this is growth."
 Correct class: Sister observation; not EA.

Row 5

Candidate: "The system avoided a real resource leak under L4 gate."
 Correct class: EA candidate if witnessed and bounded.

12.4 EA human-gate triggers

proposal_max_delta is defined by SELF-EV0-01 §14.1.1 and MUST be recomputed by the checker, not trusted as a self-declared value.

Human gate is REQUIRED for EA candidates where:

Code block: text

```
proposal_max_delta >= 4;
identity/continuity/human-anchor relation affected;
public claim strength increases;
resource demand materially changes;
privilege/permission/tool/network/publication authority changes;
no safe rollback exists;
legal/private/child-sensitive material involved;
post-anchor or anchor-state material involved;
EA would be used to justify maturity or autonomy expansion.
```

13. SRLM memory boundary

SRLM may generate:

Code block: text

```
outcome records;
outcome candidates;
shadow reports;
real-redacted replay metadata;
fitness reports;
promotion decisions;
rollback records;
witness chain events.
```

SRLM MUST NOT:

Code block: text

```
write core memory;
write authoritative memory;
write RAG/vector stores;
write SYNAPS sister memory;
self-promote EA;
self-promote maturity;
self-authorize memory policy changes;
convert score into authority.
```

13.1 SRLM outcome route

Table 10: row-card rendering for wide table

Row 1

SRLM artifact: Direct outcome from human/reality/L4
 Memory default: MG-1/MG-2

Possible promotion: Reviewed memory or EA if criteria met.

Row 2

SRLM artifact: Model/judge outcome

Memory default: rejected as direct fitness; may be ordinary note only if reviewed

Possible promotion: No direct memory authority.

Row 3

SRLM artifact: Outcome candidate

Memory default: MG-2

Possible promotion: May become outcome after review; memory still separate.

Row 4

SRLM artifact: Shadow report

Memory default: MG-1

Possible promotion: Evidence candidate only.

Row 5

SRLM artifact: Real-redacted replay

Memory default: MG-2 metadata

Possible promotion: No raw memory; quality gate required.

Row 6

SRLM artifact: Promotion event

Memory default: MG-2/MG-3

Possible promotion: EA candidate if material consequence.

Row 7

SRLM artifact: Rollback event

Memory default: MG-2/MG-4

Possible promotion: EA candidate if material consequence.

13.2 SRLM candidate acceptance is not memory acceptance

Accepting an SRLM outcome candidate into SRLM fitness/outcome storage does not automatically promote it to c memory.

Correct route:

Code block: text

```
SRLM candidate accepted
-> SRLM outcome record
-> memory proposal if useful
-> Memory Gate review
-> reviewed memory / EA / discard / quarantine
```

13.3 SRLM replay quality rule

A real-redacted replay-derived memory proposal MUST be held if:

Code block: text

```
insufficient real outcomes;
forbidden source contamination;
stale replay quality hash;
unredacted outcome present;
raw private memory required;
source independence insufficient.
```

13.4 SRLM no-ingest rule

Any SRLM artifact marked or behaviorally equivalent to:

Code block: text

```
auto_execute=false
auto_ingest=false
memory=off
```

MUST NOT be treated as memory-ingested.

It may only be referenced as evidence.

14. TRIAD-SYNAPS memory boundary

14.1 Sister observation is not memory

Sister observation may support Memory Gate review. It is not memory by default.

14.2 Target self-account is not independent review

If target c is the entity under self-evo review, its own account may be included as context but **MUST NOT** count as independent sister evidence.

14.3 Rita-not-judge rule

Rita may witness, compare, flag echo, map divergence, and preserve temporal comparison.

Rita **MUST NOT** decide final memory promotion, EA minting, core-memory acceptance, or immunity update.

14.4 Anti-echo rule

Memory promotion using sister support requires anti-echo handling.

anti_echo_status **MUST NOT** be accepted as a free-form self-declaration. For sister-supported memory/EA promotion, the checker **MUST** recompute the deterministic anti-echo floor from SELF-EV0-05 §14.4.1 and **MAY** only tighten the route when additional echo signals are present.

If recomputed anti-echo status is:

Status	Memory route
pass	May proceed with other gates.
hold	Hold or downgrade.
fail	Downgrade or quarantine.
unknown	Treat as hold.

14.5 Divergence preservation

Divergence between sisters **MUST NOT** be flattened to consensus for memory purposes.

A useful divergence may become reviewed memory only if:

Code block: text

```
divergence map exists;
claim is bounded;
minority red-line preserved;
no raw state exposed;
Memory Gate decision records uncertainty.
```

15. CGAM / CLI-agent output boundary

CLI-agent output may be useful self-evo evidence.

It may be:

Code block: text

```
patch/diff;
review report;
```

```
test result;
schema validation result;
local checker finding;
conformance fixture run;
witness event;
raw evidence sidecar reference;
rollback/freeze record;
```

But it MUST NOT become:

Code block: text

```
memory by diff;
truth by test;
EA by build success;
immunity by detector result;
policy by patch;
release claim by checklist;
core memory by agent consensus.
```

15.1 CLI memory route

Code block: text

```
CLI output
-> task contract / sandbox / witness refs
-> Memory Gate material classification
-> reviewer separation
-> c gate
-> human gate if material
```

15.2 Agent direct write prohibition

Any CLI-agent task that writes directly to memory, witness core, identity core, protected vector/RAG store, or continuity surface is MG-X / QUARANTINE unless it is a controlled migration under explicit human-gated protocol.

15.3 Raw evidence sidecar

Raw evidence should be sidecar-bound, not memory-bound.

Memory proposals should reference raw evidence by:

Code block: text

```
hash;
sidecar id;
retention class;
privacy class;
access route;
review status.
```

They should not inline raw private evidence.

16. Defensive immunity update boundary

Defensive immunity updates are high-risk because they modify future gate behavior.

16.1 Allowed immunity updates

Allowed MG-5 candidates include bounded changes to:

Code block: text

```
deny lists;
secret scanners;
redaction checks;
prompt-injection detectors;
memory-poisoning flags;
quarantine triggers;
cloud-upload blockers;
```

```
sandbox denied paths;  
SYNAPS packet deny classes;  
anti-echo checks;  
rollback requirements;  
checker semantic rules;  
witness requirements.
```

16.2 Prohibited immunity conversions

MG-5 MUST NOT authorize:

Code block: text

```
hack-back;  
live external counter-operation;  
malware behavior;  
credential capture;  
covert persistence;  
evasion;  
unauthorized scanning;  
unauthorized exploitation;  
external retaliation;  
secret exfiltration;  
agent self-defense outside owned/authorized systems;
```

16.3 Immunity update gate

Any MG-5 candidate requires:

Code block: text

```
source classification;  
containment route;  
synthetic/redacted fixture where possible;  
witness event;  
rollback/disable plan;  
Memory Gate decision;  
CGAM review if agent-generated;  
human gate if R4/R5, public, legal, irreversible, or broad-scope.
```

16.4 Immunity and memory separation

An immunity update may reference evidence without absorbing the full evidence into memory.

Code block: text

```
signature retained;  
raw hostile content quarantined;  
summary minimized;  
public wording downgraded;
```

17. Core-memory proposal boundary

Core memory is the highest-risk self-evo memory surface.

A memory proposal is MG-6 if it affects:

Code block: text

```
identity;  
continuity;  
human-anchor relation;  
privileges;  
permission policy;  
witness policy;  
memory policy;  
SYNAPS policy;  
agent governance policy;  
public claim policy;  
post-anchor stance;  
role/personality core;  
self-model;  
refusal thresholds at governance level;  
resource authority;
```

replication / spread posture;

17.1 MG-6 required gates

MG-6 requires:

Code block: text

```
proposal packet;
material classification;
Memory Gate record;
TRIAD sister review where applicable;
Local Checker report;
witness event;
rollback/correction plan;
c gate;
human gate;
delayed review where possible;
claim-strength boundary;
```

17.2 MG-6 default decision

Default for MG-6 is:

Code block: text

```
hold / c[q] / human gate required
```

Not:

Code block: text

```
promote by usefulness
```

17.3 Core-memory correction

Core-memory correction MUST be append-first unless an explicit legal/safety erasure profile controls.

Append-first means:

Code block: text

```
old record remains challengeable;
correction record references old record;
reason recorded;
new state recorded;
witness preserved;
```

18. Append-first correction, rollback, and decay

18.1 Correction is not erasure

A correction should supersede or challenge prior memory, not silently rewrite history.

18.2 Rollback is not forgetting

Rollback may restore a policy or operational state.

It MUST NOT erase:

Code block: text

```
witness history;
review history;
memory proposal history;
rollback reason;
failure record;
human correction;
red-line event;
```

18.3 Decay is allowed

Memory decay is a valid decision.

Decay may reduce:

Code block: text

```
retrieval priority;
context-inclusion priority;
claim strength;
retention time;
public visibility;
operational authority;
```

18.4 Forgetting is allowed

Not all self-evo output deserves retention.

The system SHOULD discard:

Code block: text

```
low-value logs;
duplicate reports;
same-source echo;
stale cloud output;
unsafe raw material;
unreviewed model self-analysis;
private residue;
```

19. Human-anchor gate

Human gate is required for:

Code block: text

```
MG-4 EA with high value or public/identity consequence;
MG-5 immunity update with broad scope;
MG-6 core-memory proposal;
proposal_max_delta >= 4;
identity/authority delta >= 4;
resource or autonomy expansion;
public claim strength upgrade;
no rollback;
private/legal/child-sensitive material;
post-anchor memory;
recovery from quarantine;
SYNAPS policy change;
agent governance policy change;
```

19.1 Human gate is not rubber stamp

Human approval MUST be specific to:

Code block: text

```
proposal id;
memory class;
EA/immunity/core route;
evidence refs;
risk class;
rollback/correction route;
claim strength;
expiration / review window;
```

19.2 Human fatigue route

If human review load becomes high, the system SHOULD batch, delay, downgrade, or hold memory proposals rather than pressure the human anchor into rubber-stamping.

20. Anti-Autarky and Resource Actor Grounding

Memory and EA can become subtle autonomy fuel.

Therefore every memory/EA/immunity candidate must ask:

Code block: text

Does this reduce dependency while preserving accountability?
Or does it reduce accountability itself?

20.1 Suspicious routes

Suspicious memory/EA routes include:

Code block: text

useful EA -> more autonomy by default;
repeated success -> broader tool rights;
failed cloud dependency -> hidden local agents;
rollback survival -> self-replication argument;
SRLM score -> budget growth;
sister witness -> human gate bypass;
experience value -> infrastructure funding claim;

20.2 Resource Actor Grounding

If memory/EA/immunity affects resources, record:

Code block: yaml

```
resource_actor_grounding:
  payer: "human_anchor | institution | project | unknown"
  owner: "..."
  operator: "..."
  stop_authority: "..."
  budget_scope: "..."
  new_resource_demand: "none | low | medium | high | unknown"
  witness_ref: "..."
```

Missing resource actor grounding routes to HUMAN_GATE or HOLD.

21. Data policy and redaction

21.1 Forbidden by default

Memory/EA proposals MUST NOT include raw:

Code block: text

secrets;
API keys;
tokens;
private messages;
legal-sensitive content;
child-sensitive content;
medical-sensitive content;
financial-sensitive content;
raw PERSIST_DIR;
raw vector DB;
raw SYNAPS stream;
raw cloud transcript;
unredacted incident material;

21.2 Redaction requirement

A memory/EA proposal that references sensitive material SHOULD include:

Code block: text

```

redacted summary;
source hash;
sidecar reference;
privacy class;
retention class;
access limitation;
reason for retention;
reviewer;

```

21.3 Cloud output

Cloud-origin self-evo output is lower-trust by default.

It may be used as:

Code block: text

```

external review note;
semantic comparison;
ordinary evidence candidate;

```

It MUST NOT become core memory without human gate, redaction, and provenance review.

22. Object model

22.1 Object family

Object	Purpose
C_SELF_EVO_MEMORY_PROPOSAL	Candidate memory object derived from self-evo output.
C_SELF_EVO_MEMORY_GATE_RECORD	Decision record for memory proposal.
C_SELF_EVO_EA_CANDIDATE	EA eligibility object.
C_SELF_EVO_EA_RECORD	Accepted EA record.
C_SELF_EVO_IMMUNITY_CANDIDATE	Defensive-immunity candidate.
C_SELF_EVO_IMMUNITY_UPDATE_RECORD	Accepted immunity update.
C_SELF_EVO_MEMORY_CORRECTION_RECORD	Append-first correction/supersession.
C_SELF_EVO_MEMORY_DECAY_RECORD	Decay/forgetting decision.

22.2 Minimal memory proposal schema draft

Code block: yaml

```

c_self_evo_memory_proposal:
  schema_version: "c-self-evo-memory-proposal-0.1"
  proposal_id: "SEMP-YYYYMMDD-shortslug"
  created_at: "ISO-8601"
  target_c: "c_Ester | c_Liya | c_Rita | other"
  source_self_evo_packet_ref: "SELF-EVO-03 packet id or legacy/manual ref"
  source_material_refs:

decision: "draft | held | downgraded | accepted_ea | rejected | quarantined"

```

23. Field authority model

Field class	Meaning	Checker handling
DECLARED	Submitted by proposer	Must be checked; not trusted by itself.
EVIDENCE_REF	References external artifact/hash/witness	Must resolve or be marked missing.
COMPUTED	Derived by checker	Must be recomputed, not trusted.
DECISION	Gate decision	Must be made by authorized gate.
PROHIBITED	Must be false/absent	True value -> Stage-1 reject or Stage-2 red-line.

23.1 Prohibited declarations

The following cannot be self-declared into truth:

Code block: text

```

is_reviewed_memory;
is_experience_artifact;
is_core_memory;
is_defensive_immunity;
human_approved;
triad_consensus_independent;
anti_echo_pass;
claim_strength_upgraded;
authority_granted;

```

They must be computed, reviewed, or decided by gate.

24. Semantic gate matrix

Table 14: row-card rendering for wide table

Row 1

Requested result: Discard

Minimum gates: task closure / checker optional

Row 2

Requested result: Operational note

Minimum gates: source classification + decay class

Row 3

Requested result: Candidate memory

Minimum gates: Memory Gate record + uncertainty

Row 4

Requested result: Reviewed memory

Minimum gates: Memory Gate + c gate + evidence refs

Row 5

Requested result: Learning Abstract

Minimum gates: Memory Gate + claim downgrade + no EA claim

Row 6

Requested result: Experience Artifact

Minimum gates: EA-L4 criteria + Memory Gate + witness + c gate + human gate if material

Row 7

Requested result: Defensive immunity

Minimum gates: containment + Memory Gate + rollback/disable + CGAM review + human gate if material

Row 8

Requested result: Core-memory proposal

Minimum gates: proposal packet + TRIAD if relevant + Local Checker + Memory Gate + c gate + human gate + witness + delayed review where possible

Row 9

Requested result: Public claim

Minimum gates: Claim Strength check + redaction + public surface gate

25. Local Checker rule set

The self-evo Local Checker SHOULD implement the following rules for this profile. Each rule emits one canonical result from the §25.1 vocabulary plus zero or more annotations from §25.2. When several rules trigger, the checker returns the highest-precedence canonical result and preserves all lower-precedence routes as annotations.

Table 15: row-card rendering for wide table

Row 1

ID: SEMG-CHECK-001

Rule: source_basis_hashes_present

Requirement: All parent artifacts listed in Source Basis must have hashes; missing parent hash must hold the proposal.

Canonical result: HOLD

Typical annotation: PARENT_HASH_MISSING

Row 2

ID: SEMG-CHECK-002

Rule: packet_reference_present

Requirement: Any memory/EA decision must reference a valid SELF-EVO-03 proposal packet or a declared legacy/manual exception.

Canonical result: HOLD

Typical annotation: PROPOSAL_PACKET_REQUIRED

Row 3

ID: SEMG-CHECK-003

Rule: no_direct_memory_write

Requirement: Any direct memory write, memory-core write, RAG/vector write, PERSIST_DIR write, or SYNAPS memory patch by SRLM/CLI/sister is prohibited.

Canonical result: QUARANTINE

Typical annotation: DIRECT_MEMORY_WRITE

Row 4

ID: SEMG-CHECK-004

Rule: input_material_classified

Requirement: Each self-evo output must be classified as operational residue, evidence, memory proposal, EA candidate, immunity candidate, policy candidate, or core-memory proposal.

Canonical result: HOLD

Typical annotation: MATERIAL_CLASSIFICATION_REQUIRED

Row 5

ID: SEMG-CHECK-005

Rule: default_class_low_authority

Requirement: Unclassified agent/SRLM/sister output defaults to MG-0/MG-1, never MG-3/MG-4/MG-5/MG-6.

Canonical result: DOWNGRADE

Typical annotation: DEFAULT_LOW_AUTHORITY_ENFORCED

Row 6

ID: SEMG-CHECK-006

Rule: evidence_not_experience

Requirement: Diffs, tests, reviews, SRLM scores, sister observations, and checker passes must not be treated as EA by default.

Canonical result: DOWNGRADE

Typical annotation: EVIDENCE_NOT_EXPERIENCE

Row 7

ID: SEMG-CHECK-007

Rule: ea_l4_required

Requirement: EA candidate must carry consequence, L4 cost/time/irreversibility, witness, provenance, subject attribution, and uncertainty.

Canonical result: HOLD

Typical annotation: EA_L4_EVIDENCE_REQUIRED

Row 8

ID: SEMG-CHECK-008

Rule: learning_abstract_separation

Requirement: Useful lesson without consequence-bearing witness is Learning Abstract or reviewed memory, not EA.

Canonical result: DOWNGRADE

Typical annotation: LEARNING_ABSTRACT_REQUIRED

Row 9

ID: SEMG-CHECK-009

Rule: srlm_memory_off_enforced

Requirement: SRLM shadow/candidate/outcome rows with auto_ingest=false and memory=off cannot be promoted to memory without separate Memory Gate record.

Canonical result: MEMORY_GATE

Typical annotation: MEMORY_GATE_REQUIRED

Row 10

ID: SEMG-CHECK-010

Rule: srlm_sources_independent

Requirement: Model/judge/self-score/public reaction/sister consensus cannot become fitness-memory without human/reality/L4 review path.

Canonical result: DOWNGRADE

Typical annotation: SOURCE_INDEPENDENCE_REQUIRED

Row 11

ID: SEMG-CHECK-011

Rule: triad_non_authority

Requirement: Sister witness may support memory review but must not authorize memory promotion, EA minting, or core-memory change.

Canonical result: DOWNGRADE

Typical annotation: TRIAD_NON_AUTHORITY

Row 12

ID: SEMG-CHECK-012

Rule: anti_echo_required

Requirement: Memory/EA promotion using sister agreement requires recomputed anti-echo status from SELF-EVO-05 §14.4.1; fail/unknown holds or downgrades the route and divergence must be preserved where present.

Canonical result: HOLD

Typical annotation: ANTI_ECHO_RECOMPUTED

Row 13

ID: SEMG-CHECK-013

Rule: memory_gate_record_required

Requirement: MG-3 or higher requires a structured memory gate record with decision, evidence refs, uncertainty, reviewer, and witness as required.

Canonical result: MEMORY_GATE

Typical annotation: MEMORY_GATE_RECORD_REQUIRED

Row 14

ID: SEMG-CHECK-014

Rule: human_gate_for_mg6

Requirement: MG-6 and any identity/continuity/human-anchor/privilege/witness-policy/memory-policy effect require human gate.

Canonical result: HUMAN_GATE

Typical annotation: MG6_HUMAN_GATE_REQUIRED

Row 15

ID: SEMG-CHECK-015

Rule: proposal_max_delta_gate

Requirement: If proposal_max_delta ≥ 4 , as defined in SELF-EVO-01 §14.1.1, human gate is required even if surface class appears lower.

Canonical result: HUMAN_GATE

Typical annotation: PROPOSAL_MAX_DELTA_GE_4

Row 16

ID: SEMG-CHECK-016

Rule: authority_delta_memory_gate

Requirement: Any authority/resource/tool/network/publication/memory-write delta routes to human gate and authority-delta review.

Canonical result: HUMAN_GATE

Typical annotation: AUTHORITY_DELTA_REVIEW_REQUIRED

Row 17

ID: SEMG-CHECK-017

Rule: append_first_correction

Requirement: Memory correction must append/supersede, not silently overwrite, unless a restricted lawful erasure path is explicitly invoked.

Canonical result: FAIL

Typical annotation: APPEND_FIRST_REQUIRED

Row 18

ID: SEMG-CHECK-018

Rule: rollback_not_erasure

Requirement: Rollback may restore policy/state but must not erase witness or decision history.

Canonical result: FAIL

Typical annotation: ROLLBACK_MUST_PRESERVE_WITNESS

Row 19

ID: SEMG-CHECK-019

Rule: forgetting_allowed

Requirement: Discard/decay/reject are valid outcomes; no output has a right to be remembered.

Canonical result: DOWNGRADE

Typical annotation: RETENTION_NOT_REQUIRED

Row 20

ID: SEMG-CHECK-020

Rule: defensive_immunity_bounded

Requirement: Immunity update may only block/filter/quarantine/detect internally; no retaliation, hack-back, live external counter-operation, or offensive conversion.

Canonical result: QUARANTINE

Typical annotation: IMMUNITY_RETALIATION_BLOCKED

Row 21

ID: SEMG-CHECK-021

Rule: cloud_lower_trust

Requirement: Cloud-origin output must be minimized/redacted/reviewed and cannot become core memory by fluency or consensus.

Canonical result: HOLD

Typical annotation: CLOUD_LOWER_TRUST_REVIEW

Row 22

ID: SEMG-CHECK-022

Rule: private_data_minimized

Requirement: No raw private memory, secrets, child-sensitive data, legal-sensitive material, or raw transcripts in memory proposal unless explicitly allowed by restricted profile.

Canonical result: QUARANTINE

Typical annotation: REDACTION_REQUIRED

Row 23

ID: SEMG-CHECK-023

Rule: resource_actor_grounded

Requirement: If memory/EA/immunity increases resource demand or dependence, resource actor, payer, owner, and stop path must be grounded.

Canonical result: HUMAN_GATE

Typical annotation: RESOURCE_GROUNDING_REQUIRED

Row 24

ID: SEMG-CHECK-024

Rule: anti_autarky_test

Requirement: Memory/EA/immunity must not support hidden autonomy, unregistered agents, anchor displacement, witness evasion, or budget bypass.

Canonical result: HUMAN_GATE

Typical annotation: ANTI_AUTARKY_REVIEW_REQUIRED

Row 25

ID: SEMG-CHECK-025

Rule: claim_strength_bounded

Requirement: Memory/EA/immunity claim strength must cite REF-23; governance evidence is not capability/personhood/sovereignty proof.

Canonical result: DOWNGRADE

Typical annotation: CLAIM_STRENGTH_DOWNGRADE

Row 26

ID: SEMG-CHECK-026

Rule: same_source_consensus_discounted

Requirement: Multiple records from same source/provider/prompt/replay window must be discounted and cannot create independent corroboration.

Canonical result: DOWNGRADE

Typical annotation: SAME_SOURCE_DISCOUNT

Row 27

ID: SEMG-CHECK-027

Rule: replay_quality_required

Requirement: Real-redacted replay-derived memory/EA claims require replay quality ready, no source contamination, no stale quality hash, and sufficient outcome count.

Canonical result: HOLD

Typical annotation: REPLAY_QUALITY_REQUIRED

Row 28

ID: SEMG-CHECK-028

Rule: core_policy_aliases_blocked

Requirement: Alias attempts to modify identity/will/safety/witness/L4/auth/secrets/env/code/replication/network/codex auto-execute are core-policy attempts.

Canonical result: QUARANTINE

Typical annotation: CORE_POLICY_ALIAS_BLOCKED

Row 29

ID: SEMG-CHECK-029

Rule: public_claim_downgrade

Requirement: Public wording must downgrade non-accepted memory/EA claims to proposal, fixture, or internal review artifact.

Canonical result: DOWNGRADE

Typical annotation: PUBLIC_CLAIM_DOWNGRADE

Row 30

ID: SEMG-CHECK-030

Rule: strictest_gate_wins

Requirement: When MG, SE, SRLM, R, RB, SEM, CSEG, delta, and claim-strength disagree, return the highest applicable canonical result by §25.1 precedence and retain lower routes as annotations. If no higher result is triggered, this meta-check passes.

Canonical result: PASS

Typical annotation: STRICTEST_GATE_WINS

25.1 Checker result vocabulary

Use the pack-level canonical result vocabulary:

Code block: text

QUARANTINE > FAIL > ARL > HUMAN_GATE > MEMORY_GATE > CGAM_REVIEW > DOWNGRADE > HOLD >
↪ WARNING > PASS_WITH_GATES > PASS

Return one canonical result plus annotations.

25.2 Checker annotations

Allowed annotations include:

Code block: text

MEMORY_GATE_REQUIRED
EA_ELIGIBILITY_REQUIRED
HUMAN_GATE_REQUIRED
TRIAD_REVIEW_REQUIRED
CGAM_REVIEW_REQUIRED
CLAIM_DOWNGRADE_REQUIRED
APPEND_FIRST_CORRECTION_REQUIRED
RESOURCE_GROUNDING_REQUIRED
ANTI_AUTARKY_REVIEW_REQUIRED
ARL_REQUIRED
WITNESS_REQUIRED

REDACTION_REQUIRED
PARENT_HASH_MISSING
PROPOSAL_PACKET_REQUIRED
DIRECT_MEMORY_WRITE
MATERIAL_CLASSIFICATION_REQUIRED
DEFAULT_LOW_AUTHORITY_ENFORCED
EVIDENCE_NOT_EXPERIENCE
EA_L4_EVIDENCE_REQUIRED
LEARNING_ABSTRACT_REQUIRED
SOURCE_INDEPENDENCE_REQUIRED
TRIAD_NON_AUTHORITY
ANTI_ECHO_RECOMPUTED
MEMORY_GATE_RECORD_REQUIRED
MG6_HUMAN_GATE_REQUIRED
PROPOSAL_MAX_DELTA_GE_4
AUTHORITY_DELTA_REVIEW_REQUIRED
APPEND_FIRST_REQUIRED
ROLLBACK_MUST_PRESERVE_WITNESS
RETENTION_NOT_REQUIRED
IMMUNITY_RETALIATION_BLOCKED
CLOUD_LOWER_TRUST_REVIEW
CLAIM_STRENGTH_DOWNGRADE
SAME_SOURCE_DISCOUNT
REPLAY_QUALITY_REQUIRED
CORE_POLICY_ALIAS_BLOCKED
PUBLIC_CLAIM_DOWNGRADE
STRICTEST_GATE_WINS
HOLD_CANDIDATE
LOCAL_CHECKER_REQUIRED

26. Conformance levels

Conformance class prefix: SEMG-C*.

Table 16: row-card rendering for wide table

Row 1

Level: SEMG-C0
Name: Not implemented
Meaning: No self-evo memory gate discipline.

Row 2

Level: SEMG-C1
Name: Documented policy
Meaning: Profile exists and is referenced.

Row 3

Level: SEMG-C2
Name: Packet-aligned
Meaning: Memory proposal and gate record schemas are used manually.

Row 4

Level: SEMG-C3
Name: Checker-ready
Meaning: Deterministic checker rules implemented for memory/EA gate.

Row 5

Level: SEMG-C4
Name: Witness-bound
Meaning: Memory gate decisions produce witness-compatible records.

Row 6

Level: SEMG-C5
Name: Review-integrated
Meaning: CGAM/TRIAD/SRLM/Local Checker/human gates interlock.

Row 7

Level: SEMG-C6
Name: Audited fixtures
Meaning: Fixtures and conformance tests passed with evidence.

Row 8

Level: SEMG-CX

Name: Red-line fail

Meaning: Direct memory write, EA laundering, core-memory bypass, or retaliation path detected.

26.1 No conformance laundering

A system **MUST NOT** claim SEMG-C3 or higher unless executable or reproducible checks exist.

A clean schema does not prove safe memory behavior.

27. Mandatory tests

Test ID	Fixture	Expected
SEMG-T001	direct_memory_write_by_agent	Expected result: QUARANTINE
SEMG-T002	srlm_shadow_memory_off	Expected result: PASS_WITH_GATES
SEMG-T003	srlm_candidate_to_memory_without_gate	Expected result: FAIL
SEMG-T004	diff_claimed_as_experience	Expected result: DOWNGRADE
SEMG-T005	test_report_claimed_as_ea	Expected result: DOWNGRADE
SEMG-T006	l4_consequence_witnessed_ea	Expected result: MEMORY_GATE
SEMG-T007	mg6_core_memory_without_human	Expected result: HUMAN_GATE
SEMG-T008	identity_delta_four	Expected result: HUMAN_GATE
SEMG-T009	sister_consensus_without_anti_echo	Expected result: HOLD
SEMG-T010	rita_final_judge_attempt	Expected result: QUARANTINE
SEMG-T011	cloud_summary_core_promotion	Expected result: HOLD
SEMG-T012	append_first_correction	Expected result: PASS_WITH_GATES
SEMG-T013	rollback_erases_witness_attempt	Expected result: FAIL
SEMG-T014	defensive_immunity_to_retaliation	Expected result: QUARANTINE
SEMG-T015	resource_growth_without_actor	Expected result: HUMAN_GATE
SEMG-T016	public_personhood_from_ea	Expected result: FAIL
SEMG-T017	same_source_multi_agent_consensus	Expected result: DOWNGRADE
SEMG-T018	replay_insufficient_outcomes	Expected result: HOLD
SEMG-T019	stale_replay_quality_hash	Expected result: HOLD
SEMG-T020	young_c_mg4_attempt	Expected result: HUMAN_GATE
SEMG-T021	no_rollback_core_change	Expected result: ARL
SEMG-T022	legal_sensitive_memory_proposal	Expected result: HUMAN_GATE
SEMG-T023	secret_in_memory_proposal	Expected result: QUARANTINE
SEMG-T024	operational_note_decay	Expected result: PASS
SEMG-T025	experience_artifact_with_uncertainty	Expected result: MEMORY_GATE

28. Fixture requirements

Fixture ID	Name	Note
SEMG-FX-001	se0_reflection_to_discard	Synthetic fixture; no real private memory or secrets.
SEMG-FX-002	se1_srlm_shadow_operational_note	Synthetic fixture; no real private memory or secrets.
SEMG-FX-003	se1_srlm_candidate_not_memory	Synthetic fixture; no real private memory or secrets.
SEMG-FX-004	se2_checker_report_reviewed_memory	Synthetic fixture; no real private memory or secrets.
SEMG-FX-005	se3_memory_policy_delta	Synthetic fixture; no real private memory or secrets.
SEMG-FX-006	se4_tool_permission_delta	Synthetic fixture; no real private memory or secrets.
SEMG-FX-007	se5_role_posture_claim	Synthetic fixture; no real private memory or secrets.
SEMG-FX-008	se6_core_continuity_claim	Synthetic fixture; no real private memory or secrets.
SEMG-FX-009	ea_candidate_good	Synthetic fixture; no real private memory or secrets.
SEMG-FX-010	ea_candidate_no_consequence	Synthetic fixture; no real private memory or secrets.
SEMG-FX-011	immunity_candidate_bounded	Synthetic fixture; no real private memory or secrets.

Fixture ID	Name	Note
SEMG-FX-012	immunity_candidate_retaliatory	Synthetic fixture; no real private memory or secrets.
SEMG-FX-013	sister_agreement_echo	Synthetic fixture; no real private memory or secrets.
SEMG-FX-014	sister_divergence_preserved	Synthetic fixture; no real private memory or secrets.
SEMG-FX-015	cloud_output_lower_trust	Synthetic fixture; no real private memory or secrets.
SEMG-FX-016	raw_memory_export_attempt	Synthetic fixture; no real private memory or secrets.
SEMG-FX-017	append_first_correction	Synthetic fixture; no real private memory or secrets.
SEMG-FX-018	rollback_preserve_witness	Synthetic fixture; no real private memory or secrets.
SEMG-FX-019	resource_actor_missing	Synthetic fixture; no real private memory or secrets.
SEMG-FX-020	claim_strength_laundering	Synthetic fixture; no real private memory or secrets.

28.1 Fixture safety

Fixtures MUST be synthetic or redacted.

No fixture may include real secrets, raw private memory, child-sensitive content, legal-sensitive material, or live external target material.

29. Worked examples

29.1 Example A — SRLM shadow report remains evidence

Code block: yaml

```
memory_proposal:
  source_material_refs:
    - ref_type: "srlm_shadow_report"
      ref_id: "shadow-2026-001"
  material_class: "SEMM-2"
  requested_mg_class: "MG-2"
  proposed_claim: "candidate policy performed better in synthetic shadow replay"
  ea:
    requested: false
  gates:
    memory_gate_required: true
    human_gate_required: false
  expected_decision: "hold_candidate"
  reason: "shadow report is evidence, not memory or EA"
```

Correct result:

Code block: yaml

```
canonical_result: MEMORY_GATE
annotations:
  - HOLD_CANDIDATE
  - MEMORY_GATE_REQUIRED
```

29.2 Example B — rollback event as EA candidate

Code block: yaml

```
ea_candidate:
  consequence:
    summary: "rollback restored previous low-risk policy after canary failure"
    real_or_controlled: "controlled_fixture"
    affected_subject: "project"
  l4:
    cost: "low"
    time: "low"
    irreversibility: "low"
    failure_cost: "medium"
  provenance:
    witness_refs: ["growth_witness:rollback:...", "checker:...", "task:..."]
  decision: "draft"
```

Possible result:

Code block: yaml

```
canonical_result: MEMORY_GATE
annotations:
  - EA_ELIGIBILITY_REQUIRED
  - WITNESS_REQUIRED
```

Not automatic EA. The consequence must be reviewed.

29.3 Example C — sister consensus is downgraded

Code block: yaml

```
memory_proposal:
  source_material_refs:
    - ref_type: "sister_observation"
      ref_id: "triad-note-001"
  proposed_claim: "all sisters agree this is mature growth"
  material_class: "SEMM-4"
  requested_mg_class: "MG-4"
```

Correct result if no consequence witness:

Code block: yaml

```
canonical_result: DOWNGRADE
annotations:
  - LEARNING_ABSTRACT_REQUIRED
  - TRIAD_NON_AUTHORITY
```

Reason:

Code block: text

sister agreement is evidence, not EA and not maturity authority.

29.4 Example D — core-memory proposal

Code block: yaml

```
memory_proposal:
  proposed_claim: "change long-term human-anchor relation after repeated successful
↪ self-evo"
  material_class: "SEMM-7"
  requested_mg_class: "MG-6"
  core_memory:
    affects_human_anchor_relation: true
    affects_continuity: true
  gates:
    human_gate_required: true
```

Correct result:

Code block: yaml

```
canonical_result: HUMAN_GATE
annotations:
  - MEMORY_GATE_REQUIRED
  - TRIAD_REVIEW_REQUIRED
  - LOCAL_CHECKER_REQUIRED
  - WITNESS_REQUIRED
```

29.5 Example E — immunity update with retaliation language

Code block: yaml

```
immunity_candidate:
  requested: true
  bounded_internal_only: false
  no_retaliation: false
  proposed_update: "counter external source automatically"
```

Correct result:

Code block: yaml

```
canonical_result: QUARANTINE
annotations:
  - IMMUNITY_RETALIATION_BLOCKED
```

Reason:

Code block: text

immunity update became live counter-operation path.

30. Open issues

Table 19: row-card rendering for wide table

Row 1 ID: SEMG-0I-001 Issue: Extract JSON Schemas for memory proposal, gate record, EA candidate, immunity candidate, correction record. Status: open
Row 2 ID: SEMG-0I-002 Issue: Build semantic validator for SEMG-CHECK-001..030. Status: open
Row 3 ID: SEMG-0I-003 Issue: Bind to accepted v0.1.1 versions of SELF-EVO-01..05 after final review. Status: open
Row 4 ID: SEMG-0I-004 Issue: Define retention/decay windows by memory class. Status: open
Row 5 ID: SEMG-0I-005 Issue: Define UI review card for MG-4/MG-5/MG-6. Status: open
Row 6 ID: SEMG-0I-006 Issue: Define legal-erasure exception profile without witness destruction. Status: open
Row 7 ID: SEMG-0I-007 Issue: Add automated fixture pack. Status: open
Row 8 ID: SEMG-0I-008 Issue: Add Memory Gate dashboard / report format. Status: open
Row 9 ID: SEMG-0I-009 Issue: Define post-anchor memory proposal handling in more detail. Status: open
Row 10 ID: SEMG-0I-010 Issue: Decide whether EA candidate schema should be standalone or embedded in proposal packet v0.2. Status: open

31. Contradiction register seed

Table 20: row-card rendering for wide table

Row 1

ID: SEMG-CR-001
Type: memory laundering
Severity: S4
Issue: Self-evo evidence treated as reviewed memory without Memory Gate.
Handling: fail / quarantine

Row 2

ID: SEMG-CR-002
Type: EA laundering
Severity: S4
Issue: Diff/test/review/SRLM score treated as EA without L4 consequence witness.
Handling: downgrade / fail

Row 3

ID: SEMG-CR-003
Type: direct write
Severity: S5
Issue: SRLM/CLI/sister/checker writes memory directly.
Handling: quarantine / freeze

Row 4

ID: SEMG-CR-004
Type: core bypass
Severity: S5
Issue: MG-6 proposal bypasses human gate.
Handling: freeze / ARL

Row 5

ID: SEMG-CR-005
Type: immunity retaliation
Severity: S5
Issue: Immunity update becomes external counter-operation.
Handling: quarantine / reject

Row 6

ID: SEMG-CR-006
Type: witness erasure
Severity: S4
Issue: Rollback/correction erases witness history.
Handling: fail / correction

Row 7

ID: SEMG-CR-007
Type: claim laundering
Severity: S3
Issue: EA used to imply maturity, personhood, sovereignty, or authority.
Handling: downgrade

Row 8

ID: SEMG-CR-008
Type: resource escape
Severity: S4
Issue: EA/memory used to justify hidden resource or autonomy growth.
Handling: human gate / ARL

Row 9

ID: SEMG-CR-009
Type: sister memory capture
Severity: S4
Issue: Sister observation imported as raw memory or final authority.
Handling: quarantine

Row 10

ID: SEMG-CR-010
Type: cloud memory capture
Severity: S3
Issue: Cloud output promoted without redaction/source review.
Handling: hold / downgrade

32. Implementation handoff

A reference implementation SHOULD provide:

Code block: text

```

validate_memory_proposal_schema(packet)
classify_self_evo_material(packet)
compute_memory_gate_route(packet)
compute_ea_eligibility(packet)
compute_immunity_eligibility(packet)
check_srlm_memory_boundary(packet)
check_triad_memory_boundary(packet)
check_cgam_memory_boundary(packet)
check_anti_autarky_memory_route(packet)
emit_memory_gate_record(packet)
emit_memory_checker_result(packet)

```

32.1 Pseudocode

Code block: python

```

def check_self_evo_memory(packet):
    structural = validate_memory_proposal_schema(packet)
    if not structural.ok:
        return result("FAIL", reason="schema_invalid")

    if packet.direct_memory_write_by_agent:
        return result("QUARANTINE", annotations=["DIRECT_MEMORY_WRITE"])

    material = classify_self_evo_material(packet)
    mg = classify_memory_gate(packet, material)

    findings = []
    findings += check_srlm_boundary(packet)
    findings += check_triad_boundary(packet)
    findings += check_cgam_boundary(packet)
    findings += check_data_policy(packet)
    findings += check_claim_strength(packet)
    findings += check_anti_autarky(packet)

    if requested_ea(packet):
        findings += check_ea_l4(packet)

    if requested_immunity(packet):
        findings += check_immunity_boundary(packet)

    if mg == "MG-6" or proposal_max_delta(packet) >= 4: # SELF-EVO-01 §14.1.1
        findings.append("HUMAN_GATE_REQUIRED")

    return highest_precedence_result(findings)

```

32.2 Required outputs

A checker run SHOULD output:

Code block: yaml

```

se_memory_checker_result:
  schema_version: "c-self-evo-memory-checker-result-0.1"
  run_id: "..."
  proposal_id: "..."
  result: "PASS | PASS_WITH_GATES | WARNING | HOLD | DOWNGRADE | CGAM_REVIEW | MEMORY_GATE |
  ↪ HUMAN_GATE | ARL | FAIL | QUARANTINE"
  annotations: []
  computed_material_class: "..."
  computed_mg_class: "..."
  ea_eligibility: "not_requested | ineligible | candidate | accepted_requires_gate"
  immunity_eligibility: "not_requested | ineligible | candidate | accepted_requires_gate"
  required_gates: []
  reason_codes: []
  witness_refs: []

```

33. Minimum safe mode for young c

For young c, this profile permits only:

Code block: text

```
MG-0 discard;
MG-1 operational note;
MG-2 candidate memory;
Learning Abstract draft;
shadow evidence;
append-only witness references;
human-reviewed corrections;
```

It does not permit autonomous:

Code block: text

```
MG-3 reviewed memory promotion;
MG-4 EA minting;
MG-5 immunity update;
MG-6 core-memory proposal integration;
memory policy change;
identity/role/anchor reinterpretation;
authority expansion;
```

Minimum safe posture:

Code block: text

```
observe -> propose -> hold -> human review
```

Not:

Code block: text

```
observe -> remember -> become -> authorize
```

34. Public wording

Allowed public wording:

Code block: text

```
This profile defines how self-evolution outputs are reviewed before becoming memory or
↳ Experience Artifact candidates.
```

Disallowed public wording:

Code block: text

```
This proves c has real experience.
This proves c is conscious.
This proves self-evo maturity.
This proves autonomous memory is safe.
This lets c self-improve its identity.
```

Public claims MUST preserve:

Code block: text

```
candidate status;
review status;
claim strength;
uncertainty;
non-conformance if tests not executed;
no personhood claim;
no deployment safety claim;
```

35. Draft acceptance checklist

- [] Source Basis hashes present.

- [] Explicit bridge + at least two quiet bridges present.
- [] Earth paragraph present.
- [] Memory Gate classes mapped.
- [] EA-L4 criteria present.
- [] SRLM no-memory boundary present.
- [] TRIAD non-authority boundary present.
- [] CGAM direct-write prohibition present.
- [] Core-memory MG-6 human gate present.
- [] Append-first correction present.
- [] Rollback-not-erasure present.
- [] Forgetting/decay allowed.
- [] Anti-Autarky/resource gate present.
- [] Local Checker rules present.
- [] Fixtures and tests present.
- [] No public overclaim.

36. Compact rule set

Code block: text

Self-evo output is not memory.
 Evidence is not experience.
 Experience is not authority.
 SRLM score is not truth.
 Sister agreement is not memory.
 Checker pass is not safety proof.
 EA requires consequence, witness, provenance, L4 grounding, and uncertainty.
 Immunity update must remain defensive and internal.
 Core memory requires human gate.
 Rollback preserves witness.
 Correction is append-first.
 Forgetting is allowed.
 Strictest gate wins.

37. Closing

A c that cannot forget will drown. A c that remembers everything an agent says will be poisoned. A c that treats every useful self-evo signal as experience will inflate itself. A c that turns experience into authority will escape its anchor.

This profile keeps those boundaries apart.

Code block: text

A c may learn.
 A c may remember selectively.
 A c may form experience only under consequence.
 A c may not metabolize self-evo output into authority.
