

07d - Public Corpus Index and Citation Surface Sync v0.1

Academic PDF rendering for the CCALC / C-calculus governed binding stack v0.1.

Document ID	07d_PUBLIC_CORPUS_INDEX_AND_CITATION_SURFACE_SYNC_v0_1
Version/status	normative draft + checker seed package
Stack layer	public corpus index and citation sync
Date	2026-07-05
Author	Kotov Ivan, Bruxelles, Belgique - 2026
ORCID	0009-0009-6002-9845
Reserved DOI	10.5281/zenodo.21205427
Notice	This DOI is reserved and becomes active after Zenodo publication.

Abstract / purpose

07d defines how public corpus indexes and citation surfaces stay synchronized after a release, supersession, erratum, retraction, or withholding decision. It closes the publication-side gap left after 07, 07a, 07b, and 07c: The layer is not concerned with proving that a private event happened. It is concerned with keeping public citation surfaces honest about what may be cited, what has been superseded, what has been retracted, and what remains withheld.

Non-claims boundary

- _ not legal advice
- _ not privacy-law certification
- _ not safety certification
- _ not deployment authorization
- _ not standards compliance certification
- _ not regulated approval
- _ not C-A1 ratification
- _ not personhood proof
- _ not consciousness proof
- _ not live substrate truth
- _ not proof of completeness

07d - Public Corpus Index and Citation Surface Sync v0.1

Document id: 07d_PUBLIC_CORPUS_INDEX_AND_CITATION_SURFACE_SYNC_v0_1 Package id: CCALC_PUBLIC_CORPUS_CITATION_SYNC_07d_v0_1 Author: Kotov Ivan Status: normative draft + checker seed package Parent layer: 07_C_PUBLIC_EVIDENCE_DISCLOSURE_AND_REDACTION_BOUNDARY_v0_1

1. Purpose

07d defines how public corpus indexes and citation surfaces stay synchronized after a release, supersession, erratum, retraction, or withholding decision.

It closes the publication-side gap left after 07, 07a, 07b, and 07c:

```
evidence -&gt; disclosure manifest -&gt; release bundle -&gt; correction ledger -&gt; corpus index / citation surface sync
```

The layer is not concerned with proving that a private event happened. It is concerned with keeping public citation surfaces honest about what may be cited, what has been superseded, what has been retracted, and what remains withheld.

2. Core formula

```
public release is not just a ZIP;
public release creates citation surfaces that must remain synchronized.
```

Operational form:

```
artifact hash -&gt; corpus item record -&gt; citation surface records -&gt; sync decision -&gt; public index update
| hold | supersede | retract | quarantine
```

3. Source bindings

```
| Component | SHA-256 |
|---|---|
| 'DOC04_CONTINUITY_STACK_UMBRELLA' | '6caeab8d489aaa6b26902db3bd3ece4c5169e5c8d5617b93aed6586ea900322d' |

```

4. Public citation surfaces

The default citation-sync set is:

```
README_INDEX
CITATION_CFF
ZENODO_METADATA
GITHUB_RELEASE
WEBSITE_PUBLICATION_PAGE
LLMS_TXT
SITEMAP_XML
```

Optional surfaces include:

```
ORCID_WORKS
DOI_LANDING_PAGE
```

A surface is not authoritative merely because it is public. A surface is admissible only when it carries the same artifact hash, status, claim-force ceiling, and correction guidance as the governing corpus item record.

5. Status propagation

```
| Status | Citation rule |
|---|---|
| 'CURRENT' | May be cited as current only when all required surfaces agree on hash and status. |
| 'SUPERSEDED' | Must carry a replacement artifact hash and public supersession notice. |
| 'RETRACTED' | Must carry 'do_not_cite_as_current' guidance on every public surface. |
| 'ERRATA' | Must carry an errata notice on every public surface. |
| 'WITHHELD' | May expose only a placeholder; withheld evidence cannot strengthen claims. |
```

6. Claim-force ceiling

07d may support public citation and public custody claims. It must not lift claims into ontology, safety certification, deployment authorization, legal certification, or live-substrate truth.

Forbidden examples:

```
hash matches -&gt; therefore semantic truth
redacted evidence exists -&gt; therefore stronger claim
```

withheld evidence exists -> therefore hidden authority
 public DOI exists -> therefore deployment authorization
 C-A10 -> parse as C-A1 by prefix

C-A10 is handled as an exact claim-force token and is not treated as C-A1.

7. Checker seed

The checker seed is:

src/public_corpus_citation_sync_checker_v0_1.py

It checks:

source bindings
 human/citation/privacy review presence
 negative-cache and red-pattern blocks
 corpus item IDs and artifact hashes
 required citation surfaces
 surface hash/status/DOI consistency
 claim-force ceilings
 supersession / retraction / errata propagation
 raw secret / private key / raw runtime ledger leakage
 hash-only semantic-truth laundering
 redaction and withheld-evidence authority laundering
 C-A1 / deployment / safety / legal overclaims

8. Fixture and mutation coverage

This package contains 90 fixture cases and a mutation harness.

The intended high-risk failure classes are:

missing source binding
 stale source hash
 model-only release/citation review
 negative-cache ignored
 red-pattern ignored
 required surface missing
 surface hash drift
 DOI divergence
 C-A1 or deployment overclaim
 hash-only semantic-truth laundering
 redaction strengthens claim
 withheld evidence strengthens claim
 raw secret/private key/runtime ledger public
 superseded item still marked current
 retracted item still citable
 errata notice missing
 withheld item exposed as public surface
 C-A10 false-positive against C-A1 prefix logic

9. Non-claims

This package is not:

legal advice
 privacy-law certification
 safety certification
 deployment authorization
 C-A1 ratification
 live substrate truth
 proof of completeness

10. Reading order

07 -> 07a -> 07b -> 07c -> 07d

07d is the public-corpus synchronization capstone for the 07 public evidence layer.
