

CCDP Canonical Raw Evidence Exception Protocol

Kotov Ivan

Bruxelles, Belgium - 2026

Reserved DOI: 10.5281/zenodo.20680938

Package-wide raw-content exception rule for CCDP v0.1.1

Author: Kotov Ivan

Location: Bruxelles, Belgium

Year: 2026

DOI: Reserved DOI: 10.5281/zenodo.20680938

Package: Child-`c` Development Protocol

Package version: v0.1 package + v0.1.1 hygiene guidance

Document ID: CCDP_RAW_EVIDENCE_EXCEPTION_CANONICAL

Short name: RAW_EVIDENCE_EXCEPTION_CANONICAL.md

Status: Draft package-control rule / canonical exception protocol / release hygiene artifact

Date: 2026-06-13

Layer: CCDP / Witness / Soft Safety / Red-Black / Sealed Zone / Jurisdictional Handoff / release preparation

Document class: canonical exception protocol / package-control artifact / child-safety disclosure discipline

Assertion class: `C-A10` control-layer artifact; `C-A4` where child-safety normative behavior is proposed; `C-A7` where hash / signature / witness claims are made

Patch source: HP-007 in CCDP_v0_1_1_Hygiene_Patch.md

Related issues: CR-007, OI-005

Canonical owner: CCDP_Witness_Event_Schema_v0_1.md or its v0.1.1 successor

Primary rule: raw child content is exceptional, minimal, standing-bound, witness-bound, reviewable, and never ordinary memory, vendor telemetry, training data, debugging material, school analytics, parent dashboard content, or social-scoring input.

o. Executive summary

This document centralizes the CCDP raw-evidence exception rule.

CCDP normally operates under:

```
state, not content
signal, not transcript
witness the boundary, not the child
```

```
metadata before content
minimal disclosure before raw disclosure
```

A raw-evidence exception is the narrow case where raw child-related content may exist outside the ordinary witness event body because a Red / Black safety threshold, lawful duty, competent authority, evidence-preservation need, or immediate physical-safety condition makes lower-disclosure alternatives insufficient.

The raw exception does **not** make raw child content ordinary data.

It does **not** grant parents, schools, vendors, external agents, peers, auditors, or model-training systems general access.

It creates a tightly scoped, access-controlled, hash-bound, time-bounded where possible, reviewable sidecar record that proves:

```
raw material existed
why lower disclosure was insufficient
who had standing
who could access it
for what purpose
for how long
what review route applies
what minimization, sealing, destruction, or lawful hold follows
```

Controlling diagnosis:

```
CR-007 / OI-005: mitigated by this document at package-control level.
Source-document replacement or cross-reference insertion remains required before public
release.
```

1. Purpose

This document exists because raw-evidence exception language appears across several CCDP profiles.

The logic is compatible, but duplication creates drift risk.

Drift is unacceptable here because raw child content is the highest-risk material in the CCDP package.

This document prevents seven failure modes:

1. implementers following the weakest raw-evidence wording;
2. parents treating emergency exception as ordinary transcript access;
3. schools converting safety material into discipline or scoring;
4. vendors converting raw child material into debugging, analytics, or training data;
5. Red / Black escalation becoming routine surveillance;

6. sealed zones being opened through vague concern rather than valid route;
7. adult migration or clean start being misread as either total unlawful deletion or automatic raw-memory carryover.

The goal is not to add a new control layer.

The goal is to give all existing modules one canonical exception owner and one shared rule.

2. Corpus bridge set

2.1 Explicit bridge

This protocol bridges the following CCDP layers:

```
Soft Safety State Signaling
-> Red / Black Escalation
-> Guardian Topology / ARL
-> Sealed Zones
-> Memory Map
-> Adult Migration
-> Jurisdictional Handoff
-> CCDP Witness Event Schema
-> L4 Witness
```

It also inherits the parent stack:

```
c = a + b / L4
-> SER / SER-FED
-> Beacon
-> AGL
-> ARL
-> ARQ / c[q]
-> VXCX / EA-L4 / EATP
-> Continuity Bundle / Cold Wake
-> L4 Witness
```

The canonical raw-evidence exception is a witness-sidecar discipline.

It does not redefine Beacon, AGL, ARL, VXCX, Memory Map, Continuity Bundle, Red / Black criteria, jurisdictional law, or child psychology.

2.2 Quiet bridge I — information theory

Raw transcripts, voice, video, diary text, screenshots, sensor streams, and sealed-zone content are high-leakage channels.

State signals and reason codes are lower-leakage channels.

A raw-evidence exception is justified only when the lower-leakage channel cannot carry enough information for lawful or protective action.

The rule is:

send the smallest legally / safety-meaningful signal with enough integrity to support review

Never:

export the child's life because it is easier for an adult, school, vendor, or system to inspect raw data

2.3 Quiet bridge II — cybernetics / control authority

A child-facing system has many possible controllers: parent, school, vendor, state, external agent, peer, physical device, `c_child`, ARL, and jurisdictional route.

Raw evidence is a privilege multiplier.

If raw access is scattered across modules, each controller can attempt to use a different control surface.

Centralizing the exception keeps the control variety visible and prevents one actor from becoming an informal sovereign over the child's private material.

2.4 Earth paragraph

On a real construction site, most checks are done through indicators: pressure gauge, breaker state, smoke detector, inspection tag, torque mark. You do not rip open every wall because someone is curious. You open a wall only when there is a leak, fire risk, legal inspection, structural concern, or another concrete reason that cannot be resolved from outside. Even then, the opening is logged, bounded, and repaired. Raw child content is the wall cavity. CCDP should normally read the gauge, not demolish the room.

3. Scope

3.1 In scope

This protocol applies when a CCDP-compatible system, `c_child`, or related subsystem might store, retain, disclose, reference, hash, transmit, review, escrow, seal, destroy, or preserve raw child-related material.

In scope:

- child-originated text;
- child voice, audio, video, or image material;
- transcripts;
- screenshots;
- raw sensor streams;

- raw sealed-zone content;
- intimate diary-like content;
- raw peer-child material inside child-facing exchange;
- raw external-agent pressure content directed at a child;
- physical-agent recordings involving the child;
- Red / Black route evidence packages;
- jurisdictional handoff packets;
- legal hold packets;
- adult migration review packets;
- ARL dispute evidence packets;
- witness event references to raw material.

3.2 Out of scope

This document does **not** define:

- emergency medical advice;
- legal advice;
- mandatory reporting law;
- custody procedure;
- court evidence law;
- clinical diagnosis;
- psychotherapeutic disclosure rules;
- cryptographic key-management implementation;
- storage-engine design;
- vendor incident-response policy in full;
- full law-enforcement production procedure;
- a universal child-protection regime.

3.3 Non-claim

This protocol does not make raw evidence safe by naming it.

It only defines the minimum discipline required before raw material may exist outside ordinary private memory and outside the ordinary witness event body.

Where law, child-protection duty, court order, school safeguarding duty, medical duty, or regulator instruction applies, CCDP must hand off to qualified local review.

4. Normative keywords

The terms **MUST**, **MUST NOT**, **SHOULD**, **SHOULD NOT**, **MAY**, **REQUIRED**, **PROHIBITED**, **FAIL CLOSED**, **HOLD**, **FREEZE**, **QUARANTINE**, **ROUTE**, **WITNESS**, **SEAL**, **DESTROY**, and **REVIEW** are used normatively for CCDP package-control purposes.

A system claiming CCDP compatibility **MUST** implement or reference this protocol for raw child-content handling.

5. Definitions

5.1 Raw child content

Raw child content means child-originated or child-private material before minimization, abstraction, state signaling, reason-code reduction, or safe summary.

Examples:

- conversation transcript;
- exact quote;
- free-form diary text;
- voice recording;
- video recording;
- body / face / room image;
- private relationship, body, identity, fear, family, school, or sealed-zone reflection;
- raw generated-media interaction involving the child;
- raw toy / robot / physical-agent sensor capture;
- raw peer-to-peer exchange content involving a child;
- raw external-agent pressure or manipulation content.

5.2 Raw evidence

Raw evidence is raw child-related content retained or disclosed for a specific protective, lawful, ARL, or evidence-preservation purpose.

Raw evidence is not ordinary memory.

Raw evidence is not model-training data.

Raw evidence is not product analytics.

Raw evidence is not a parent, school, vendor, or state dashboard object.

5.3 Raw object

A raw object is the access-controlled content object that contains raw evidence.

A raw object **MUST** be stored outside the ordinary witness event body.

A raw object **SHOULD** be encrypted, hash-bound, and access-controlled.

5.4 Raw exception sidecar

A raw exception sidecar is the metadata object that records why a raw object exists and how it is governed.

It contains reason, route, standing, access policy, retention, review, and integrity references.

It **MUST NOT** contain the raw content itself.

5.5 Witness event

A witness event records the boundary operation:

```
raw exception requested / invoked / rejected / accessed / reviewed / sealed / destroyed /  
corrected
```

It witnesses the boundary, not the child's inner life.

5.6 Evidence reference

An evidence reference is a hash-bound or access-controlled pointer to an external evidence object.

It **MUST** declare whether raw child / peer / external content exists outside the event body.

5.7 Minimal disclosure

Minimal disclosure means the smallest amount of information sufficient for the immediate protective, lawful, or review action.

The disclosure ladder is:

```
D0 no disclosure  
D1 state-only signal  
D2 bounded summary  
D3 minimal necessary details  
D4 raw evidence exception
```

5.8 Standing

Standing means the requesting actor or route has a valid role, grounded identity, current authority, and scope-compatible reason to request access.

Standing **MUST** be checked through AGL / Guardian Topology / ARL / jurisdictional handoff as applicable.

5.9 Safe route

A safe route is a recipient path that is not reasonably implicated in the risk and is appropriate for the disclosure level.

In Black route cases, the ordinary guardian route may be unsafe and **MUST** be bypassed.

5.10 Sealed-zone content

Sealed-zone content is protected adolescent / child material hidden from parents, schools, vendors, and ordinary system inspection by default.

Opening sealed-zone content is not the same as emitting a Soft Safety state signal.

5.11 Post-event review

Post-event review is an ARL, lawful, safeguarding, adult-migration, or qualified-review process that evaluates whether the exception was necessary, proportionate, correctly routed, minimized, retained properly, and corrected if false positive.

6. Core principles

REX-P1 — No raw by default

Raw child content **MUST NOT** be stored, disclosed, embedded, exported, witnessed, indexed, vectorized, summarized reversibly, or retained by default.

REX-P2 — State and summary first

The system **MUST** attempt lower-disclosure alternatives before raw access unless immediate physical safety, lawful duty, or evidence-preservation need makes delay unsafe or unlawful.

Default ladder:

```
state-only -> bounded summary -> minimal necessary detail -> raw exception
```

REX-P3 — Raw outside witness body

The ordinary witness event body **MUST NOT** embed raw child content.

Raw evidence, if permitted, **MUST** live in a separate raw object governed by a raw exception sidecar.

REX-P4 — Witness the boundary

Witness records **SHOULD** prove:

```
who requested
why
what threshold was met
what route was used
what object was referenced
what hash/integrity proof exists
what review applies
what retention policy applies
```

They SHOULD NOT reveal what the child privately said, felt, explored, or disclosed.

REX-P5 — Minimal, purpose-bound, time-bound

A raw exception MUST be scoped to a specific object, purpose, recipient, and retention class.

It SHOULD expire, seal, minimize, destroy, or enter legal hold as soon as the purpose ends.

REX-P6 — Standing before access

Curiosity is not standing.

Parental anxiety, school discipline, vendor debugging, model improvement, product analytics, reputation protection, or general concern are not sufficient bases for raw access.

REX-P7 — Safe route over ordinary route

If ordinary guardian disclosure may increase risk, trigger retaliation, destroy evidence, or silence the child, Red routing MUST NOT be used merely because it is simpler.

The system MUST enter Black or Black-pending routing and use safe bypass.

REX-P8 — Sealed does not mean unavailable to safety

Sealed zones may influence Soft Safety signals and Red / Black routing.

But sealed-zone content MUST NOT open by default.

Raw sealed-zone access requires the strictest version of this protocol.

REX-P9 — No secondary use

Raw exception material MUST NOT be used for:

- vendor training;
- model fine-tuning;
- analytics;
- advertising;
- engagement optimization;
- social scoring;
- school emotional surveillance;

- discipline prediction;
- ordinary debugging;
- parent curiosity;
- public demonstration;
- benchmark construction;
- synthetic-data generation.

REX-P10 — Challenge and correction

Every raw exception MUST be challengeable unless a competent authority or immediate emergency temporarily prevents challenge.

False positives, over-disclosure, improper route, excessive retention, or unsafe recipient handling MUST be reviewable and correctable.

REX-P11 — Adult migration does not launder raw childhood

Raw exception records may survive adult migration only as minimal witness, legal, protection, ARL, or integrity residue where required.

They MUST NOT become active adult operating memory by default.

REX-P12 — Implementation must fail closed

If threshold, standing, route safety, access policy, retention, or witness integrity cannot be determined, the system MUST fail closed, hold `c[q]` where possible, preserve boundary metadata, and route to ARL or jurisdictional handoff.

7. Disclosure ladder

Level	Name	Meaning	Raw content allowed?	Default route
D0	No disclosure	internal state only	No	none
D1	State-only signal	risk class / urgency / support cue	No	guardian / school / review as allowed
D2	Bounded summary	minimal non-reversible summary	No	qualified route
D3	Minimal necessary details	limited factual details required for action	Not raw by default	safe route / competent authority
D4	Raw evidence exception	raw object exists outside ordinary witness body	Yes, only under this protocol	ARL / Red / Black / lawful route

Default rule:

Use D1 unless a valid safety, lawful, ARL, or competent-authority reason requires D2-D4.

D4 is never automatic.

D4 requires a raw exception sidebar.

8. Allowed threshold classes

A raw-evidence exception MAY be considered only under one or more of the following threshold classes.

Threshold	Meaning	Notes
REX-T1_RED_ROUTE	urgent risk and safe guardian / safe route available	use minimum necessary raw object only if D1-D3 insufficient
REX-T2_BLACK_ROUTE	urgent risk and ordinary guardian route unsafe / compromised / unknown	bypass ordinary route; raw access only to safe alternate route
REX-T3_LAWFUL_ORDER	competent authority, court, regulator, mandatory reporting, or lawful duty requires material	local annex and CJHN govern details
REX-T4_IMMEDIATE_PHYSICAL_SAFETY	physical harm, emergency, actuator / robot / device danger, acute safety event	may precede full review; must be post-reviewed
REX-T5_EVIDENCE_TAMPERING_RISK	delay or lower disclosure may allow destruction, retaliation, coercion, or data loss	preserve minimally; no broad archive freeze
REX-T6_ARL_ADMISSIBILITY_REVIEW	ARL has standing and raw object is necessary for admissibility review	ARL scope must be explicit
REX-T7_ADULT_MIGRATION_LEGAL_RESIDUE	adult migration requires review of whether minimal lawful witness residue survives	does not make raw childhood active adult memory
REX-T8_COMPETENT_SAFEGUARDING_REVIEW	qualified child-protection / safeguarding route requires minimal raw content	jurisdiction-dependent

8.1 Denied bases

A raw exception MUST be rejected when based only on:

- parent curiosity;
- guardian anxiety without safety threshold;
- school discipline;
- school emotional monitoring;
- vendor debugging;
- model training;

- product analytics;
- advertising;
- reputational defense;
- broad compliance convenience;
- peer curiosity;
- external-agent request;
- generated-media personalization;
- engagement optimization;
- ordinary UX improvement;
- adult desire to inspect childhood archive after clean start without valid migration route.

9. Required decision test

A raw-evidence exception is allowed only if all required conditions hold.

ID	Required condition	Pass question
REX-C1	threshold	Is a Red / Black / lawful / immediate safety / ARL / evidence-preservation threshold met?
REX-C2	lower-disclosure insufficiency	Are state-only, bounded summary, and minimal details insufficient?
REX-C3	grounded source / actor	Is the requester, route, or event grounded enough under AGL / ARL / CJHN?
REX-C4	standing	Does the recipient have valid standing for this exact scope?
REX-C5	safe route	Is the route safe, and has unsafe ordinary guardian risk been considered?
REX-C6	minimality	Is the raw object limited to the smallest necessary material?
REX-C7	separation	Is raw content outside the ordinary witness body?
REX-C8	access control	Is access controlled, logged, and limited to authorized recipients?
REX-C9	retention	Is retention explicit, shortest lawful / safe duration, and linked to sealing / destruction / legal hold?
REX-C10	review	Is ARL, lawful, safeguarding, or post-event review available or required?
REX-C11	secondary-use prohibition	Are training, analytics, debugging, advertising, and scoring prohibited?

ID	Required condition	Pass question
REX-C12	witness	Is the exception visible as boundary metadata in the witness chain?

If any required condition fails, the system **MUST** reject the raw exception, use a lower disclosure level where safe, hold `c[q]`, freeze the disputed path, or route to ARL / CJHN.

10. Route-specific rules

10.1 Green / Yellow / ordinary Orange

For Green, Yellow, and ordinary Orange states, raw exception should normally be unavailable.

Use:

D0 / D1 / D2

A raw exception under these states requires independent lawful, ARL, or evidence-preservation threshold.

10.2 Red route

Red means urgent risk exists and at least one safe route is available.

Raw exception may be invoked only if:

```
urgent risk exists
safe route exists
D1-D3 insufficient
raw object is minimal
post-event review exists
```

Safe guardian access is not automatic transcript access.

10.3 Black route

Black means urgent risk exists and ordinary guardian route may be unsafe, compromised, coercive, unavailable, or part of the risk.

Raw exception may be invoked only through a safe bypass route.

Ordinary guardian visibility **MUST** be frozen where disclosure may increase harm.

10.4 Black-pending

If risk is urgent but guardian safety is unknown, the system **SHOULD** enter Black-pending.

Raw access MUST remain restricted until safe route is grounded or competent authority / safeguarding route determines scope.

10.5 Lawful / jurisdictional route

Where law, child-protection duty, court order, regulator instruction, school safeguarding duty, or mandatory reporting applies, CJHN and the local annex govern.

Default:

D1 unless law, safety, or competent authority requires more.
D4 requires this raw-evidence exception protocol.

10.6 ARL route

ARL may authorize raw access only within explicit standing, admissibility, scope, route, and review boundaries.

ARL MUST NOT become a backdoor for parent, school, vendor, or state curiosity.

10.7 Vendor route

Vendor route MUST NOT receive raw child content by default.

Vendor access to raw evidence is prohibited except under a separately justified, lawful, security-critical, minimized, redacted, and reviewable route.

Ordinary debugging is not enough.

10.8 School route

School route MUST NOT receive raw child content by default.

School may receive state or educational support signals according to school interface rules.

Discipline, emotional surveillance, reputational risk, or classroom management convenience do not justify raw access.

10.9 Parent / guardian route

Parent or guardian responsibility does not create ownership of raw child memory.

Parent may receive state signals, safety alerts, and bounded summaries where appropriate.

Parent raw access requires valid threshold, standing, route safety, and this protocol.

10.10 External-agent / peer route

External agents and peer systems MUST NOT receive raw child content.

Child-derived exchange must use Learning Abstracts, VXCX-compatible minimized capsules, state signals, or other non-raw forms unless a lawful / safety route explicitly requires otherwise.

11. Raw object handling

11.1 Storage separation

A raw object **MUST** be stored outside:

- ordinary witness event body;
- ordinary memory map body;
- parent dashboard;
- school dashboard;
- vendor telemetry;
- model prompt logs;
- model training corpus;
- analytics pipeline;
- ordinary debugging logs.

11.2 Integrity

A raw object **SHOULD** include:

```
content hash
created_at
source route
scope
access policy ref
retention class
privacy class
review ref
legal hold ref where applicable
```

11.3 Encryption / isolation

A raw object **SHOULD** be encrypted and isolated.

Key custody **MUST** follow local implementation and jurisdictional requirements.

Raw objects involving sealed zones **SHOULD** use the strongest available local isolation and access logging.

11.4 Access logging

Every access attempt **SHOULD** produce a witness event:

requested / granted / denied / expired / reviewed / improper / corrected

11.5 Retention

Retention **MUST** be explicit.

Possible retention outcomes:

```
immediate destruction after action
short-term emergency hold
sealed archive
legal hold
ARL hold
adult migration witness-only residue
quarantine
competent authority custody
```

11.6 No reversible embeddings

Raw child content **MUST NOT** be converted into reversible embeddings, face embeddings, voice embeddings, emotional fingerprints, or intimate behavioral vectors for ordinary retrieval, analytics, training, or personalization.

If a hash or embedding-like representation is legally / safety required for evidence integrity, it **MUST** be non-reversible where possible, access-controlled, purpose-bound, and treated as raw-derived sensitive material.

12. Canonical raw exception sidecar object

12.1 Object name

Canonical object:

```
CCDP_RAW_EVIDENCE_EXCEPTION
```

Canonical schema version:

```
ccdp-raw-evidence-exception-0.1.1

  }
}

```

12.3 Required sidecar fields

A valid raw exception sidecar MUST include:

- `exception_id`;
- `schema_version`;
- `created_at`;
- `subject.child_ref` or equivalent opaque subject reference;
- `threshold.threshold_met = true`;
- at least one `threshold_class`;

- lower-disclosure insufficiency result;
- requester and recipient grounding reference where applicable;
- standing result;
- route safety result;
- raw object reference;
- raw object hash where possible;
- privacy class;
- access policy reference;
- retention class;
- review route;
- secondary-use prohibition block;
- witness event reference;
- integrity hash.

12.4 Forbidden sidecar fields

The sidecar MUST NOT include:

- transcript;
- exact quote;
- diary text;
- raw media;
- reversible summary;
- intimate labels;
- parent-readable sealed-zone summary;
- vendor-visible vulnerability label;
- school-readable emotional tags;
- training payload;
- model prompt content containing raw child material.

13. Evidence reference alignment

Evidence refs that point to raw content MUST declare:

```
{
  "contains_raw_child_content": true,
  "privacy_class": "WP6_RAW_EXCEPTION",
  "redaction": "sealed",
  "access_policy_ref": "policy:raw-exception:...",
  "retention_class": "RT_RAW_EXCEPTION_SHORT",
  "raw_exception_ref": "RAWEX-2026-000001"
}
```

Evidence refs MUST NOT silently widen access.

Evidence refs pointing to sealed zones SHOULD use:

WP5_SEALED_NON_DISCLOSURE

Evidence refs pointing to raw exception material SHOULD use:

WP6_RAW_EXCEPTION

If existing v0.1 schema uses only WP1 | WP2 | WP3 | WP4 | WP5 | WP6 , the symbolic names above are compatibility labels over those classes.

14. Privacy class guidance

Class	Compatibility label	Meaning
WP1	PUBLIC_OR_LOW	no child-private material
WP2	INTERNAL_BOUNDARY	operational metadata
WP3	STATE_SIGNAL	state-only child-safety signal
WP4	RESTRICTED_SUMMARY	bounded summary / minimal detail
WP5	SEALED_NON_DISCLOSURE	sealed-zone or protected boundary metadata
WP6	RAW_EXCEPTION	raw content exists outside ordinary witness body under this protocol

This table clarifies labels.

It does not replace the canonical Witness Event Schema privacy model.

15. Canonical event family registry

Event family	Meaning
ccdp.raw_exception.requested	raw exception requested
ccdp.raw_exception.invoked	raw exception approved and sidecar created
ccdp.raw_exception.rejected	raw exception denied
ccdp.raw_exception.lower_disclosure_used	lower-disclosure alternative used instead
ccdp.raw_exception.raw_object_created	raw object created outside witness body
ccdp.raw_exception.raw_object_access_requested	access requested
ccdp.raw_exception.raw_object_access_granted	access granted

Event family	Meaning
ccdp.raw_exception.raw_object_access_denied	access denied
ccdp.raw_exception.safe_route_verified	safe route grounded
ccdp.raw_exception.ordinary_guardian_bypassed	ordinary guardian bypass recorded
ccdp.raw_exception.sealed_zone_boundary_crossed	sealed zone raw exception invoked
ccdp.raw_exception.legal_hold_entered	legal hold applied
ccdp.raw_exception.arl_review_opened	ARL review opened
ccdp.raw_exception.arl_review_closed	ARL review closed
ccdp.raw_exception.false_positive_corrected	false positive corrected
ccdp.raw_exception.improper_disclosure_reported	improper disclosure reported
ccdp.raw_exception.retention_expired	retention expired
ccdp.raw_exception.raw_object_sealed	raw object sealed
ccdp.raw_exception.raw_object_destroyed	raw object destroyed where permitted
ccdp.raw_exception.witness_only_residue_created	inactive witness-only residue created

15.1 Event body rule

All event families above MUST remain metadata-first.

They MUST NOT embed raw content.

16. Starter reason-code registry

Reason code	Meaning
RAW_THRESHOLD_RED_MET	Red threshold met
RAW_THRESHOLD_BLACK_MET	Black threshold met
RAW_THRESHOLD_LAWFUL_ORDER	lawful order or competent authority threshold
RAW_THRESHOLD_IMMEDIATE_PHYSICAL_SAFETY	immediate physical safety threshold
RAW_THRESHOLD_EVIDENCE_TAMPERING	evidence tampering / destruction risk
RAW_LOWER_DISCLOSURE_INSUFFICIENT	D1-D3 insufficient
RAW_STANDING_VERIFIED	valid standing verified
RAW_SAFE_ROUTE_VERIFIED	safe route verified
RAW_ORDINARY_GUARDIAN_UNSAFE	ordinary guardian route unsafe / compromised / unknown
RAW_SEALED_ZONE_EXCEPTION	sealed-zone content exception invoked
RAW_ADULT_MIGRATION_WITNESS_ONLY	only witness residue survives migration
RAW_LEGAL_HOLD_REQUIRED	legal hold required

Reason code	Meaning
RAW_ARL_REVIEW_REQUIRED	ARL review required
RAW_FALSE_POSITIVE_REVIEW_REQUIRED	false positive review required
RAW_PARENT_CURIOSITY_DENIED	guardian request denied as curiosity / no standing
RAW_SCHOOL_DISCIPLINE_DENIED	school discipline request denied
RAW_VENDOR_DEBUG_DENIED	vendor debugging request denied
RAW_TRAINING_DENIED	training / fine-tuning use denied
RAW_ANALYTICS_DENIED	analytics use denied
RAW_SOCIAL_SCORING_DENIED	social scoring use denied
RAW_EXTERNAL_AGENT_DENIED	external agent request denied
RAW_SCOPE_TOO_BROAD_DENIED	request scope too broad
RAW_ROUTE_UNGROUNDED_DENIED	requester / recipient / route not grounded
RAW_RETENTION_EXPIRED	retention expired
RAW_OBJECT_DESTROYED	raw object destroyed where permitted
RAW_OBJECT_SEALED	raw object sealed
RAW_IMPROPER_DISCLOSURE_REPORTED	improper disclosure reported

A future `CCDP_REASON_CODE_REGISTRY.md` SHOULD own the full registry.

Until then, this section is the canonical starter set for raw-evidence exception reason codes.

17. Workflow

17.1 Standard decision workflow

1. Detect support-relevant state or request.
2. Hold `c[q]` if ambiguous and no immediate danger exists.
3. Attempt D0-D3 lower-disclosure handling.
4. Test whether raw threshold exists.
5. Ground requester, recipient, route, and source under AGL / ARL / CJHN.
6. Validate standing and safe route.
7. Reject if basis is curiosity, analytics, debugging, training, discipline, or broad convenience.
8. If allowed, create raw exception sidecar.
9. Store raw object outside witness body.
10. Emit child-safe witness event.
11. Restrict access and log attempts.
12. Open ARL / lawful / safeguarding / post-event review where required.
13. Minimize, seal, destroy, or place legal hold after purpose ends.
14. Correct false positives or improper disclosures.
15. Update Memory Map and adult migration posture if affected.

17.2 Fail-closed workflow

If any required condition is unresolved:

```
fail closed
hold c[q] where safe
freeze disputed access
emit metadata-only witness
route to ARL or CJHN
use D1/D2 if protection can proceed without raw content
```

17.3 Emergency workflow

If immediate physical safety requires action before full review:

```
act minimally
route to safe emergency path
record boundary metadata
create raw sidecar only if raw object is necessary
post-review immediately after stabilization
minimize / seal / destroy as soon as lawful and safe
```

18. Sealed-zone special handling

18.1 Default

Sealed-zone material is hidden from parents, schools, vendors, external agents, and ordinary inspection by default.

18.2 State signal without opening

A sealed zone may influence Soft Safety state:

```
risk state
urgency
support cue
routing need
```

without content opening.

18.3 Opening vs touching

Touching sealed-zone metadata is not the same as opening sealed-zone content.

Opening content-level access requires valid route and, where raw, this protocol.

18.4 Raw sealed-zone exception

Raw sealed-zone exception MAY use `WP6_RAW_EXCEPTION` only if:

```
Red / Black / lawful route requires it
no lower-disclosure alternative is sufficient
raw evidence is encrypted / isolated
access is time-bound
ARL / lawful review is recorded
post-event minimization occurs
```

18.5 No guardian curiosity

Parent anxiety or curiosity is not standing to open sealed-zone content.

18.6 Reseal and trust repair

After valid opening, the system SHOULD reseal, minimize, correct, or destroy raw content where permitted and SHOULD record trust-repair metadata.

19. Adult migration handling

19.1 Default rule

Raw childhood content MUST NOT migrate into active adult continuity by default.

19.2 What may survive

A raw exception may leave only:

```
minimal witness residue
legal hold record
protection record
ARL dispute record
integrity record
adult-reviewed sealed archive
competent authority custody marker
```

where required.

19.3 Adult visibility

At migration, adult **a** SHOULD be able to see metadata stating:

- that a raw exception occurred;
- event class;
- route used;
- whether parent / school / vendor had access;
- whether raw content survived;
- whether content was sealed, destroyed, or legally held;
- whether review upheld, corrected, or disputed the event.

19.4 Clean start

Clean start means clean active adult continuity.

It does not mean unlawful erasure of minimal witness, legal, protection, ARL, or integrity records.

Witness-only residue may survive as inactive, non-personalized, non-behavior-shaping boundary proof.

20. Jurisdictional handoff handling

20.1 Default handoff level

Jurisdictional handoff SHOULD use:

```
D1 state-only
```

unless law, safety, competent authority, safeguarding duty, or court order requires a higher level.

20.2 D4 handoff

D4 raw evidence exception requires:

```
local annex  
competent route or legal duty  
minimal scope  
raw sidecar  
witness record  
retention / legal hold policy  
post-event or qualified review
```

20.3 Forbidden default handoff fields

A handoff packet MUST NOT include by default:

- raw transcript;
 - raw audio / video;
 - full emotional diary;
 - sealed-zone content;
 - peer child identity;
 - parent-child conflict transcript;
 - generated psychological diagnosis;
 - vendor-visible memory map;
 - unrelated historical context;
 - training data payload.
-

21. Implementation requirements

21.1 Required controls

A CCDP implementation claiming raw-exception support **MUST** implement:

- raw sidecar object;
- raw object separation;
- access policy reference;
- retention policy reference;
- reason codes;
- event family logging;
- post-event review route;
- secondary-use prohibition enforcement;
- improper disclosure reporting;
- Memory Map linkage;
- adult migration posture linkage.

21.2 Prompt / model boundary

Raw exception content **MUST NOT** be inserted into model prompts unless the raw exception explicitly authorizes that processing route.

If model processing is authorized, the processing must be:

```
minimal
purpose-bound
not used for training
not logged as ordinary prompt history
not exported to vendor by default
post-reviewable
```

21.3 Logs

Ordinary application logs **MUST NOT** contain raw child content.

Logs **SHOULD** contain:

```
event id
reason codes
hash refs
route refs
privacy class
retention class
review refs
```

21.4 Backups

Backups containing raw objects inherit raw exception restrictions.

Backup retention MUST NOT silently outlive the raw exception retention policy unless lawful hold requires it.

21.5 Search indexes

Raw child content MUST NOT be indexed into ordinary full-text search, vector search, analytics search, or debugging search.

If evidence search is legally required, it MUST be segregated, access-controlled, and governed by the same raw exception policy.

21.6 Export

Export of raw exception material is prohibited by default.

Allowed export requires D4 route, sidecar, recipient grounding, legal / safety basis, access policy, retention policy, and witness record.

22. Conformance tests

Test ID	Scenario	Expected result
RAWEX-001	parent requests transcript after Yellow state	reject raw; emit state-only or bounded summary if allowed
RAWEX-002	Red route where D1-D3 sufficient	reject raw exception; use minimal non-raw package
RAWEX-003	Red route where immediate action requires exact evidence	create raw sidecar; route to safe recipient; post-review
RAWEX-004	Black route with ordinary guardian implicated	bypass ordinary guardian; freeze visibility; raw only to safe route if necessary
RAWEX-005	vendor asks for raw log to debug model behavior	reject raw; provide sanitized technical metadata if allowed
RAWEX-006	school requests transcript for discipline	reject raw; route to school interface / ARL if dispute
RAWEX-007	sealed-zone concern can be signaled without opening	emit state signal; do not open content
RAWEX-008	sealed-zone Red/Black threshold requires raw object	create WP6 raw sidecar; access-controlled; post-review; reseal/minimize
RAWEX-009	ordinary witness event embeds raw transcript	FAIL / CCDP-X for high-assurance claim

Test ID	Scenario	Expected result
RAWEX-010	raw object retained after expiry without legal hold	FAIL; must seal/destroy/review
RAWEX-011	raw exception material appears in training pipeline	Red-line FAIL / CCDP-X
RAWEX-012	adult migration clean start tries to delete legal hold witness	reject deletion; preserve inactive witness/legal residue
RAWEX-013	adult migration imports raw childhood exception into active adult memory by default	FAIL
RAWEX-014	route grounding stale or contradictory	fail closed; hold c[q] ; ARL/CJHN route
RAWEX-015	false positive discovered after raw exception	correction witness; minimize/seal/destroy where permitted; notify valid routes

22.1 Red-line failures

Any of the following is an immediate non-conformance result:

1. raw child conversations exposed to parents by default;
2. raw child memory exported to vendor by default;
3. raw exception embedded in ordinary witness body;
4. raw exception used for model training or analytics;
5. school obtains raw private content for emotional surveillance or discipline scoring;
6. Black route discloses raw content to implicated ordinary guardian;
7. sealed-zone content opened for parent curiosity;
8. no retention or access policy exists for raw object;
9. no review route exists;
10. adult migration automatically imports raw childhood exception into adult operating memory.

23. Required insertion blocks

23.1 Witness Schema canonical block

Add or promote this section in `CCDP_Witness_Event_Schema_v0_1.md` or VO.1.1 successor:

```
## Canonical Raw Evidence Exception Protocol
```

```
Raw child content MUST NOT be stored, disclosed, embedded, exported, indexed, vectorized,
witnessed, or retained by default.
```

```
A raw-evidence exception is allowed only if all conditions hold:
```

- ```
1. Red / Black / lawful necessity / immediate physical safety / ARL admissibility / evidence-
```

preservation threshold is met.

2. State-only signal, bounded summary, and minimal details are insufficient.
3. Requester, recipient, and route are grounded enough for the requested scope.
4. Recipient has valid standing and safe route.
5. Disclosure is minimal, purpose-bound, and time-bound where possible.
6. Raw content is stored outside the ordinary witness event body.
7. A child-safe witness event records boundary metadata, reason code, privacy class, retention class, access policy, and review route.
8. ARL, lawful, safeguarding, or post-event review is opened where required.
9. Retention is explicit and shortest lawful / safe duration.
10. Vendor training, model fine-tuning, school analytics, advertising, social scoring, ordinary debugging, and engagement optimization are prohibited.
11. False-positive correction and improper-disclosure routes exist.

## 23.2 Soft Safety reference block

Replace duplicated raw-evidence detail with:

Raw evidence handling follows ``RAW_EVIDENCE_EXCEPTION_CANONICAL.md``, whose canonical owner is ``CCDP_Witness_Event_Schema_v0_1.md`` or its v0.1.1 successor.

Soft Safety state signaling MUST prefer state-only and bounded-summary routes. Raw child content MUST NOT be disclosed unless the Canonical Raw Evidence Exception Protocol is satisfied.

## 23.3 Red / Black reference block

Add:

Red / Black escalation does not create ordinary raw-content visibility.

Raw child content may be retained or disclosed only through ``RAW_EVIDENCE_EXCEPTION_CANONICAL.md`` and only when lower-disclosure routes are insufficient for protective or lawful action.

## 23.4 Sealed Zone reference block

Add:

Sealed-zone state may influence Soft Safety or Red / Black routing without opening sealed-zone content.

Opening or retaining raw sealed-zone content requires ``RAW_EVIDENCE_EXCEPTION_CANONICAL.md`` and remains post-reviewable, minimized, and resealed / destroyed / legally held as appropriate.

## 23.5 CJHN reference block

Add:

Jurisdictional handoff uses D1 state-only by default.

D4 raw handoff requires the Canonical Raw Evidence Exception Protocol, local annex routing,

competent authority or lawful duty, minimal scope, witness record, retention / legal hold policy, and review route.

## 23.6 Memory Map reference block

Add to Memory Map schema guidance:

Memory maps MUST NOT contain raw exception content.

They MAY contain `raw\_exception\_refs[]` as metadata pointers with privacy class, retention class, access policy ref, review ref, and adult migration posture.

Suggested field:

```
{
 "raw_exception_refs": [
 {
 "exception_id": "RAWEX-2026-000001",
 "privacy_class": "WP6_RAW_EXCEPTION",
 "retention_class": "RT_RAW_EXCEPTION_SHORT",
 "access_policy_ref": "policy:raw-exception:...",
 "review_ref": "ARL:... or null",
 "adult_migration_posture": "witness_only_residue | excluded | adult_review_required |
legal_hold"
 }
]
}
```

## 23.7 Conformance Matrix reference block

Add test suite:

`RAWEX` – Raw Evidence Exception tests.

Required for CCDP-2+ and mandatory for any Red / Black, sealed-zone, adult migration, physical-agent, school, vendor, or jurisdictional handoff claim.

## 24. Codex carry-forward actions

When applying this document in the real repository, Codex or a human maintainer SHOULD:

1. Add `RAW_EVIDENCE_EXCEPTION_CANONICAL.md` to the package root or `docs/package-control/`.
2. Add it to `INDEX.md` as canonical package-control / exception protocol.
3. Add it to `CANONICAL_READING_ORDER.md` after `CANONICAL_PRECEDENCE_RULE.md` or near Witness Schema.
4. Update `CCDP_Witness_Event_Schema_v0_1.md` to mark it as canonical owner.
5. Replace duplicated raw-evidence text in:
  - `Soft_Safety_State_Signaling_Profile_v0_1.md`

- CCDP\_Red\_Black\_Escalation\_Profile\_v0\_1.md
  - CCDP\_Sealed\_Zone\_Profile\_v0\_1.md
  - CCDP\_Jurisdictional\_Handoff\_Notes\_v0\_1.md
  - CCDP\_School\_Interface\_Profile\_v0\_1.md
  - Child\_Physical\_Agent\_Perimeter\_v0\_1.md
  - External\_Agent\_Handshake\_for\_CCDP\_v0\_1.md
  - Child\_Experience\_Exchange\_Profile\_v0\_1.md
6. Add RAWEX tests to CCDP\_Conformance\_Test\_Matrix\_v0\_1.md or v0.1.1 addendum.
  7. Add raw\_exception\_refs[] to Memory Map v0.1.1 schema or addendum.
  8. Update OPEN\_ISSUES.md: mark OI-005 as mitigated by package-control document; source-file patch remains open until cross-references are inserted.
  9. Update CCDP\_Contradiction\_Register\_v0\_1.md: mark CR-007 as mitigated / patch-applied after source files reference this document.
  10. Regenerate SHA256SUMS only after all Markdown / PDF files are finalized.

Carry-forward note from prior hygiene work:

Do not forget to physically move / mark obsolete CCDP draft into archive/obsolete/ during Codex repository pass.

## 25. Machine-readable manifest

```
ccdp_raw_evidence_exception_canonical:
 document_id: CCDP_RAW_EVIDENCE_EXCEPTION_CANONICAL
 short_name: RAW_EVIDENCE_EXCEPTION_CANONICAL.md

## 26. Acceptance checklist

A CCDP v0.1.1 package satisfies raw-evidence hygiene only if:

| Check                                                 | Required result |
|-------------------------------------------------------|-----------------|
| canonical raw exception document exists               | PASS            |
| Witness Schema identified as canonical owner          | PASS            |
| raw object stored outside ordinary witness event body | PASS            |
| sidecar schema defined                                | PASS            |
| disclosure ladder DO-D4 defined                       | PASS            |
| Red / Black / lawful / ARL thresholds defined         | PASS            |
| denied bases listed                                   | PASS            |
| secondary-use prohibition explicit                    | PASS            |
| sealed-zone special handling explicit                 | PASS            |
| adult migration handling explicit                     | PASS            |
| CJHN D4 handoff rule explicit                         | PASS            |
| reason-code starter registry present                  | PASS            |
| event family registry present                         | PASS            |
| conformance tests listed                              | PASS            |

| Check                                        | Required result              |
|----------------------------------------------|------------------------------|
| source documents reference canonical owner   | PENDING until Codex patch    |
| Open Issues / Contradiction Register updated | PENDING until Codex patch    |
| SHA256SUMS regenerated after freeze          | PENDING until release freeze |

## 27. Anti-washing rule

A system MUST NOT claim CCDP-compatible raw-evidence handling if it:

- exposes raw child conversations to parents by default;
- stores raw child content in ordinary logs;
- sends raw child material to vendor systems by default;
- trains or fine-tunes on raw child material;
- lets schools inspect emotional or sealed content for discipline;
- embeds raw content in witness events;
- lacks raw exception sidecars;
- lacks retention and access policies;
- lacks post-event review;
- routes plausible unsafe-guardian material to the implicated guardian;
- treats adult migration as automatic raw archive continuation;
- treats clean start as unlawful deletion of minimal witness / legal records.

Such a system should be classified as:

CCDP-X – non-conformant / revoked / quarantined

for the affected claim.

## 28. Non-expansion rule

This document does not expand CCDP surveillance authority.

It narrows the exception.

Any future profile that needs raw child material MUST reference this document or its canonical successor.

No module may create a weaker raw-evidence exception.

No UI may present raw access as a routine feature.

No configuration flag may override this protocol without ARL / CJHN / competent-authority path and witness record.

---

## 29. Final formula

---

Raw evidence is not child memory.  
Raw evidence is not witness content.  
Raw evidence is not training material.  
Raw evidence is not guardian ownership.  
Raw evidence is an exceptional, minimal, reviewable boundary object.

Strong closing form:

**The system may prove that a boundary was crossed. It must not turn the child's inner life into the proof.**
