Academic PDF rendering from Markdown source. Content-level claims are unchanged.

Boundary: this PDF rendering does not create a conformance certificate, deployment authorization, witness-independence certification, implementation claim, or live self-evolution permission.

WDC-ASM-002 Gate Closure Record v0.1

Package-control closure record for Self-Evo WDC v0.1.2 release-candidate assembly

Status: Gate closure record / package-control artifact

Date: 2026-06-27T13:24:00Z

Record ID: WDC_ASM_002_GATE_CLOSURE_RECORD_v0_1

Short name: WDC-ASM-002-GATE-CLOSURE v0.1

Gate: WDC-ASM-002 — textual harmonization of 03 and the patch index to the canonical 04 WDC vocabulary

Closure result: CLOSED

Closure mode: textual harmonization, not crosswalk-only retention

Package: Self-Evo WDC v0.1.2 release candidate

Authority boundary: closes only WDC-ASM-002; does not assemble the package, authorize public release, certify conformance, certify witness independence, authorize deployment, or close any other package-assembly gate.

> This record is written after the corrected WDC-ASM-002 harmonization candidate received a clean review-level PASS. > It binds the final harmonized hashes for 03 and the patch index and records the narrow gate-closure decision. > It is not a public release and not a conformance certificate.

0. Executive summary

WDC-ASM-002 was the package-assembly gate that remained open because 03 and the patch index still had to be brought into alignment with the canonical WDC annotation vocabulary defined by 04.

That work has now converged:

```
03 harmonized file:
03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_2.md

final SHA-256:
5a7e6af6bc83d3b7ccde875eae1a0e928600cf509b494bd773c43c29537264f3

patch-index harmonized file:
SELF_EV0_v0_1_2_PATCH_INDEX_v0_1_3.md

final SHA-256:
af01b1b443a87c11lab7dab2e001d01e8bffc0710362b89da7781238447ea28b
```

The independent re-review of the corrected harmonization candidate returned PASS and verified:

```
old historical WDC annotation strings: 0 hits in the corrected index
canonical 04 vocabulary: present
PASS_WITH_LIMITS as checker / fixture output: absent
hash bindings: coherent
red line: none
```

Therefore, this record marks:

WDC-ASM-002: CLOSED

The closure is intentionally narrow:

```
closed:
WDC-ASM-002 — 03 / patch-index textual harmonization to canonical 04 vocabulary

not closed:
WDC-ASM-001 — package placement / source map / SHA map / citation map
WDC-ASM-003 — 07 WRCG/CST projection verification
WDC-ASM-004 — 08 fixture gate
WDC-ASM-005 — boundary / nonclaim scan
WDC-ASM-006 — remaining implementation open-issues capture
```

1. Closure scope

1.1 In scope

This closure record covers one gate:

Gate	Name	Closure decision
WDC-ASM-002	Harmonize `03` and the patch index to canonical `04` WDC vocabulary, or provide total/lossless crosswalk	`CLOSED` by textual harmonization

It records that the release-candidate package no longer needs to carry the 03 and patch-index hashes as provisional pending WDC-ASM-002.

1.2 Out of scope

This record does not perform or claim:

1. package assembly;
2. final package placement;
3. manifest SHA-map rewrite;
4. DOI deposit;
5. public release;
6. conformance execution;
7. fixture-runner execution;
8. deployment review;
9. implementation readiness;
10. witness-independence certification;
11. personhood, consciousness, AGI, sovereignty, or autonomy claims;
12. memory write;
13. runtime SRLM authorization;
14. resource-acquisition authorization;
15. closure of any gate other than WDC-ASM-002.

1.3 Closure statement

On the basis of the PASS re-review of the corrected WDC-ASM-002 harmonization candidate, and the verified final hashes for the harmonized 03 and patch-index files, WDC-ASM-002 is marked CLOSED for the Self-Evo WDC v0.1.2 release-candidate assembly stream.

This is a package-control closure. It is not a release.

2. Corpus bridge set

2.1 Explicit bridge: $c = a + b$

In $c = a + b$, a package-assembly gate belongs to b.

It is not the living judgment of a. It is not the whole operating presence of c. It is a documentary control surface that prevents a package from pretending that unresolved vocabulary drift has been settled.

Closing WDC-ASM-002 means the b-layer vocabulary surface is now coherent for this gate:

03 and patch index now speak the same WDC annotation language as 04.

This helps c because the package no longer has to rely on reader memory, informal remapping, or tolerant interpretation to understand what the checker vocabulary means.

2.2 Quiet bridge I: information theory

A package manifest is a channel.

If one document says `wdc.challenge_capacity_degraded`, another says `wdc.challenge_survivability_unverified`, and the mapping is left implicit, the channel is lossy. The reader has to reconstruct the intended signal from drift.

Textual harmonization reduces that loss.

It makes the active package vocabulary a lower-entropy surface:

```
one canonical token set;
one checker-facing interpretation;
one release-candidate hash binding.
```

2.3 Quiet bridge II: cybernetics

A control loop cannot correct what it cannot name consistently.

The checker vocabulary is the sensor vocabulary of the package. If the sensor names differ between schema surfaces, index surfaces, and checker surfaces, feedback becomes ambiguous.

Closing WDC-ASM-002 therefore improves the cybernetic loop:

```
same observed condition -&gt; same annotation token -&gt; same downstream gate effect
```

This does not execute the checker. It only removes a naming instability before the checker or package manifest depends on it.

2.4 Quiet bridge III: physiology

A body can tolerate local inflammation while healing, but it cannot let the nervous system use two names for the same pain signal.

The WDC stream was the inflammation map created after the witness-dependency problem was found. WDC-ASM-002 is a nerve-label repair: the same pain now has the same name across the packet, index, and checker-facing vocabulary.

That does not mean the body is fully recovered.

It means one diagnostic pathway is no longer ambiguous.

2.5 Earth paragraph

On a real construction site, if two versions of the electrical schedule use different labels for the same breaker condition, you do not tell the team to “just remember the mapping.” You correct the schedule before commissioning. Otherwise the person doing the final check may isolate the wrong line, sign the wrong box, or miss a live fault. WDC-ASM-002 is that label correction: the drawing set can now move forward, but the building is still not energized until the remaining commissioning gates are closed.

3. Source basis and hash map

3.1 Primary closure basis

The closure is based on the corrected harmonization candidate and its clean re-review.

```
| Role | File | Lines | SHA-256 | Status |
|---|---|---|---|---|
| Gate-execution record | `WDC_ASM_002_TEXTUAL_HARMONIZATION_RECORD_v0_1_1.md` | 236 |
`d40f97cfd2572c97ae48511653960fc09e97992aef696fb4ab8d78bbb9f11658` | corrected candidate record |
| Gate-execution patch notes | `WDC_ASM_002_TEXTUAL_HARMONIZATION_PATCH_NOTES_v0_1_1.md` | 81 |

| Gate-execution re-review | `WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1_1.md` | 178 |
`254680ae52ad03eccb4b0da4ed272478a3e1c714116dfb7e6268de8f83222d94` | `PASS` |
| Harmonized `03` | `03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_2.md` | 1003 |
`5a7e6af6bc83d3b7ccde875eae1a0e928600cf509b494bd773c43c29537264f3` | final for `WDC-ASM-002` |
| Harmonized patch index | `SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_3.md` | 855 |
`af01b1b443a87c111ab7dab2e001d01e8bffc0710362b89da7781238447ea28b` | final for `WDC-ASM-002` |
| Current manifest to be updated downstream | `SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_MANIFEST_v0_1_1.md`
| 556 | `cde9178adf686bd4a463592325424462852ad0fb1314017642183fd78542f177` | accepted manifest
artifact; SHA map still requires propagation |
```

3.2 Final harmonized hashes to propagate

The following hashes are the closure output of WDC-ASM-002:

```
wdc_asm_002_final_harmonized_hashes:
  &quot;03&quot;;
    file: &quot;03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_2.md&quot;;
    sha256: &quot;5a7e6af6bc83d3b7ccde875eae1a0e928600cf509b494bd773c43c29537264f3&quot;;
  patch_index:
    file: &quot;SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_3.md&quot;;
    sha256: &quot;af01b1b443a87c111ab7dab2e001d01e8bffc0710362b89da7781238447ea28b&quot;;
```

3.3 Supersession chain

```
03:
  03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_1.md
  -&gt; 03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_2.md

patch index:
  SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_1.md
  -&gt; SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_2.md
  -&gt; SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_3.md

gate record:
  WDC_ASM_002_TEXTUAL_HARMONIZATION_RECORD_v0_1.md
  -&gt; WDC_ASM_002_TEXTUAL_HARMONIZATION_RECORD_v0_1_1.md

gate review:
  WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1.md
  -&gt; WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1_1.md
```

The superseded records are not deleted. They remain part of the witness chain.

4. Gate criteria

4.1 Gate definition

WDC-ASM-002 required one of two closure paths:

```
| Path | Meaning | Chosen? |
|---|---|---|
| textual harmonization | revise `03` and patch index so their active annotation vocabulary matches
canonical `04` terms | yes |
| explicit crosswalk | leave textual surfaces unchanged but provide a total/lossless crosswalk verified
at package assembly | no |
```

The selected path is textual harmonization.

4.2 Closure conditions

The closure conditions are:

```
| Condition | Required result | Observed result |
|---|---|---|
| Old planning strings removed from active `03` and patch-index surfaces | no active residuals |
| satisfied |
| Canonical `04` vocabulary used | all canonical WDC terms available where needed | satisfied |
| `PASS_WITH_LIMITS` not used as checker/fixture output | absent as output | satisfied |
| Schema, enums, red lines preserved | no weakening | satisfied |
| Hashes bind to actual files | coherent | satisfied |
| No release/conformance/independence/deployment overclaim | absent | satisfied |
| Review result | `PASS` | satisfied |
```

4.3 Canonical vocabulary

The closure binds the package to the canonical 04 WDC vocabulary:

```
wdc.undeclared_dependency_impact
wdc.wrcg_missing_or_failed
wdc.sole_approver_of_witness_change
wdc.witness_resource_floor_degraded
wdc.challenge_survivability_unverified
wdc.challenge_cost_mitigation_missing
wdc.clean_no_dependency_impact
wdc.clean_with_gates
wdc.relevance_unknown
```

4.4 Historical vocabulary retired from active output surfaces

The following historical planning strings are not part of the active harmonized WDC output vocabulary:

```
wdc.witness_dependency_controls_present
wdc.wrcg_required
wdc.challenge_cost_increase
wdc.resource_floor_violation
wdc.challenge_capacity_degraded
wdc.no_witness_dependency_regression
wdc.self_approval_of_witness_resources
```

They may appear only in historical review records, patch notes, superseded artifacts, or explanatory provenance contexts.

5. Closure decision

5.1 Decision

```
closure_decision:
  gate: &quot;WDC-ASM-002&quot;;
  decision: &quot;CLOSED&quot;;
  closure_mode: &quot;textual_harmonization&quot;;
  basis:
    review_record: &quot;WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1_1&quot;;
    review_result: &quot;PASS&quot;;
    final_03_sha256: &quot;5a7e6af6bc83d3b7ccde875eae1a0e928600cf509b494bd773c43c29537264f3&quot;;
    final_patch_index_sha256: &quot;af01b1b443a87c111ab7dab2e001d01e8bffc0710362b89da7781238447ea28b&quot;;
  closed_by:
    authority_model: &quot;c/a package-control closure&quot;;
    human_anchor_instruction: &quot;operator requested WDC_ASM_002 gate closure record&quot;;
  closed_at: &quot;2026-06-27T13:24:00Z&quot;;
```

5.2 Meaning of CLOSED

CLOSED means:

The WDC vocabulary harmonization gate is satisfied for the v0.1.2 release-candidate assembly stream.

It does not mean:

```
the package is assembled;
the manifest SHA map has already been rewritten;
the package may be released;
the fixtures have been executed;
the checker has been implemented;
the system is conformance-certified;
witness independence has been proven;
deployment-sensitive use is authorized.
```

5.3 Closure rationale

The gate may close because the re-review established that the corrected candidate is sound on both required axes:

1. semantic axis — 03 and the patch index now use the canonical 04 WDC vocabulary without historical output drift;
2. provenance axis — the hash bindings now point to the actual harmonized files.

The previous blocking defect was not semantic. It was provenance-bound. That defect is closed.

6. Machine-readable closure record

```
wdc_asm_002_gate_closure_record:
  schema_version: "wdc-asm-002-gate-closure-record-0.1";

    - "WDC-ASM-001";
    - "WDC-ASM-003";
    - "WDC-ASM-004";
```

```

- &quot;WDC-ASM-005&quot;;
- &quot;WDC-ASM-006&quot;;

nonclaims:
  package_assembled: false
  public_release_authorized: false
  conformance_certified: false
  deployment_authorized: false
  witness_independence_certified: false
  implementation_ready: false
  memory_write_authorized: false
  runtime_self_evolution_authorized: false

next_required_steps:
- &quot;Update the package assembly manifest SHA map with 03=5a7e6af6... and index=af01b1b4...&quot;;
- &quot;Record the manifest update under WDC-ASM-001 package placement / SHA map / citation map.&quot;;
- &quot;Proceed to WDC-ASM-003: 07 WRCG/CST projection verification.&quot;;
- &quot;Proceed later to WDC-ASM-004, WDC-ASM-005, WDC-ASM-006, and final package assembly review.&quot;;

rollback_policy:
  reopen_if:
    - &quot;a later review finds historical WDC annotation strings in active output surfaces&quot;;
    - &quot;a later review finds the final 03 or patch-index hashes do not match the files&quot;;
    - &quot;a later review finds canonical 04 vocabulary was changed or weakened&quot;;
    - &quot;a later package assembly uses a different 03 or patch-index version without a new gate
  record&quot;;
    - &quot;a later release surface treats this closure as conformance, deployment, or witness-independence
      certification&quot;;

```

7. Manifest propagation requirement

WDC-ASM-002 closure produces a downstream manifest update obligation.

The current accepted package assembly manifest is:

```

SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_MANIFEST_v0_1_1.md
sha256: cde9178adf686bd4a463592325424462852ad0fb1314017642183fd78542f177

```

It marked the 03 and patch-index hashes as provisional pending WDC-ASM-002.

After this closure, the next manifest-facing update should:

1. replace the provisional 03 hash with:
5a7e6af6bc83d3b7ccde875eae1a0e928600cf509b494bd773c43c29537264f3
2. replace the provisional patch-index hash with:
af01b1b443a87c111ab7dab2e001d01e8bffc0710362b89da7781238447ea28b
3. record WDC-ASM-002 as CLOSED.
4. keep WDC-ASM-001, WDC-ASM-003, WDC-ASM-004, WDC-ASM-005, WDC-ASM-006 pending unless separately closed.
5. state that the manifest update is not release, not DOI deposit, and not conformance certification.

This manifest update is part of package-control assembly discipline. It is not performed by this record.

8. Remaining gates

8.1 Gate table after WDC-ASM-002 closure

Gate	Status after this record	Notes
WDC-ASM-001	PENDING	package placement / source map / SHA map / citation map; advanced by this closure but not closed
WDC-ASM-002	CLOSED	textual harmonization complete; final hashes bound
WDC-ASM-003	PENDING	verify 07 WRCG/CST projection crosswalk
WDC-ASM-004	PENDING	08 fixture gate: canonical-only outputs, no aliases, no PASS_WITH_LIMITS as output
WDC-ASM-005	PENDING	boundary / nonclaim scan
WDC-ASM-006	PENDING	remaining implementation open issues without overclaiming

8.2 Next recommended gate

The next substantive gate is:

WDC-ASM-003 – verify 07 WRCG/CST projection crosswalk

Reason:

WDC-ASM-002 has now stabilized the package vocabulary.
The next risk is whether 07's richer WRCG/CST semantics project correctly into 03's packet-facing
enums
without loss or false equivalence.

9. Nonclaim boundary

This closure record must not be cited as proof that:

Self-Evo v0.1.2 is released;
the package is assembled;
the checker is implemented;
fixtures were executed;
conformance was achieved;
deployment-sensitive use is safe;
witness independence has been certified;
a c-system may self-evolve;
memory promotion is authorized;
resource changes may be made autonomously;
personhood, consciousness, AGI, sovereignty, or autonomy has been established.

The only positive claim made here is:

WDC-ASM-002 is closed as a package-control gate because 03 and the patch index have been textually
harmonized to the canonical 04 WDC vocabulary and the final hashes have been verified.

10. Review and witness requirements

10.1 Optional review target

A later reviewer may inspect this record using:

WDC_ASM_002_GATE_CLOSURE_REVIEW_RECORD_v0_1.md

Expected review checks:

1. the closure basis references the PASS harmonization re-review;
2. the final 03 hash is 5a7e6af6...;
3. the final patch-index hash is af01b1b4...;
4. no other gate is marked closed;
5. no release/conformance/deployment/witness-independence claim is introduced;
6. the manifest propagation obligation is present;
7. rollback/reopen conditions are present.

10.2 Witness note

This closure record is a witness-compatible b-layer package-control artifact.

It records a decision and binds it to hashes.

It does not, by itself, prove the downstream package state.

11. Rollback and reopen conditions

WDC-ASM-002 must be reopened if any of the following are later found:

```
| Reopen trigger | Effect |
|---|---|
| final `03` hash in the package differs from
  `5a7e6af6bc83d3b7ccde875eaela0e928600cf509b494bd773c43c29537264f3` without a superseding closure
  record | reopen |
| final patch-index hash in the package differs from
  `af01b1b443a87c111ab7dab2e001d01e8bffc0710362b89da7781238447ea28b` without a superseding closure
  record | reopen |
| active package surfaces still contain historical WDC annotation strings as output vocabulary | reopen
|
| package uses a crosswalk inconsistent with the textual harmonization | reopen |
| manifest propagates stale hashes | reopen |
| a release surface claims conformance, deployment, or witness independence from this gate alone |
  reopen and quarantine the claim surface |
| another gate depends on WDC-ASM-002 but silently substitutes a different artifact | reopen |
| later review finds that schema/enums/red-lines were weakened | reopen |
```

If reopened, this record must not be deleted. A superseding append-first record must name the reason and new status.

12. Closing

Gate closure verdict:
WDC-ASM-002 CLOSED.

Basis:
WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1_1 = PASS.

Final harmonized hashes:
03 = 5a7e6af6bc83d3b7ccde875eaela0e928600cf509b494bd773c43c29537264f3
index = af01b1b443a87c111ab7dab2e001d01e8bffc0710362b89da7781238447ea28b

Closure meaning:
03 and patch index are harmonized to canonical 04 WDC vocabulary.

Closure boundary:
No package assembly.
No public release.
No conformance claim.
No deployment authorization.
No witness-independence certification.
No closure of WDC-ASM-001/003/004/005/006.

Next:
update manifest SHA map, then proceed to WDC-ASM-003.
