Academic PDF rendering from Markdown source. Content-level claims are unchanged.

Boundary: this PDF rendering does not create a conformance certificate, deployment authorization, witness-independence certification, implementation claim, or live self-evolution permission.

WDC-ASM-002 Textual Harmonization Record v0.1.1

Package-assembly gate execution candidate for Self-Evo WDC v0.1.2

Status: assembly-gate execution artifact / review candidate

Date: 2026-06-27

Gate ID: WDC-ASM-002

Record ID: WDC_ASM_002_TEXTUAL_HARMONIZATION_RECORD_v0_1_1

Short name: WDC-ASM-002-HARMONIZATION v0.1.1

Gate target: textual harmonization of the accepted 03 WDC schema delta and the WDC patch index to the canonical 04 WDC vocabulary

Decision made: textual harmonization, not crosswalk-only retention

Authority: advisory/package-control evidence only; not assembly, not release, not conformance, not deployment authorization

Supersedes: WDC_ASM_002_TEXTUAL_HARMONIZATION_RECORD_v0_1.md (sha256: d90b86e04b5880fe103da129a13e1c2637ec76f2cccb27fd8cd652d76943a493)

0. Boundary

This record executes the textual harmonization candidate for WDC-ASM-002.

It does not:

1. assemble the package;
2. close WDC-ASM-001, WDC-ASM-003, WDC-ASM-004, WDC-ASM-005, or WDC-ASM-006;
3. release Self-Evo v0.1.2;
4. claim conformance;
5. claim implementation readiness;
6. certify witness independence;
7. authorize deployment or live self-evolution.

The purpose is narrower:

remove provisional annotation vocabulary from 03 and the patch index
so package assembly does not rely on a temporary crosswalk as the final text.

1. Rationale

The package-assembly manifest v0.1.1 marks 03 and the patch index as provisional pending WDC-ASM-002.

The open choice was:

- A. keep the existing texts and rely on explicit crosswalk verification;
- B. textually harmonize the documents to the canonical SELF-EVO-04 vocabulary.

This record chooses B.

Reason:

A release candidate should not carry temporary vocabulary where a clean canonical vocabulary already exists.

The canonical vocabulary owner remains:

```
04_Self_Evo_Local_Checker_Rules_WDC_Delta_v0_1_2_v0_1_1.md
```

2. Corpus bridge set

2.1 Explicit bridge: $c = a + b$

In $c = a + b$, harmonization is a b-layer package-control operation. It changes documentary vocabulary and source binding. It does not become c, does not become a, and does not authorize growth.

2.2 Quiet bridge I — information theory

A crosswalk is a useful decoder, but if the final package keeps two active vocabularies, the package encodes avoidable ambiguity. Textual harmonization removes that channel noise: one canonical WDC vocabulary is used for active checker and fixture outputs.

2.3 Quiet bridge II — cybernetics

A control loop fails when two instruments report the same condition in different units. WDC-ASM-002 makes the schema delta and patch index read in the same units as the Local Checker.

2.4 Quiet bridge III — physiology

Repair is not only closing the wound; it is also aligning the scar tissue so future stress does not tear at the seam. This harmonization aligns the WDC seam before package assembly.

2.5 Earth paragraph

A commissioning package cannot leave one drawing in metric, one checklist in imperial, and a note saying “convert mentally.” That can work during design review, but not in the handover set. This gate converts the active documents to one unit system before handover.

3. Changed artifacts

```
| Artifact | Prior SHA-256 | New SHA-256 | Lines | Status |
|---|---|---|---|---|
| `03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_1.md` ->
| `03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_2.md` |
| `5ebbd0084f3b1b80ce267c847a84ef16f135b57e6fc353e4f07616dceebe4343` |
| `5a7e6af6bc83d3b7ccde875eae1a0e928600cf509b494bd773c43c29537264f3` | 1003 | harmonized candidate |
| `SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_1.md` -> `SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_3.md` |
| `ea2a485569b220d84d711ae520da779af2cabddcb7f1d8032afb2a9208d5108e` |
| `af01b1b443a87c111ab7dab2e001d01e8bffc0710362b89da7781238447ea28b` | 856 | harmonized candidate /
| hash-binding corrected |
```

Reference artifacts:

```
| Artifact | Role | SHA-256 |
|---|---|---|
| `04_Self_Evo_Local_Checker_Rules_WDC_Delta_v0_1_2_v0_1_1.md` | canonical WDC checker vocabulary |
| `fcb7826ea432473b5677faf7b46cc5alc47400c02fceed24429794b15064af40` |
| `08_Self_Evo_Conformance_Fixture_Pack_WDC_Delta_v0_1_2_v0_1_2.md` | canonical WDC fixtures |
| `4aa5b85e0a0af4c06fc56f30ba355ec6c378133fe3d70caee352fb93b3944389` |
| `SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_MANIFEST_v0_1_1.md` | manifest that required this gate |
| `cde9178adf686bd4a463592325424462852ad0fb1314017642183fd78542f177` |
```

4. Active annotation scan

The following historical planning annotations were removed from active 03 and patch-index WDC output surfaces:

```
wdc.witness_dependency_controls_present
wdc.wrcg_required
wdc.challenge_cost_increase
wdc.resource_floor_violation
wdc.challenge_capacity_degraded
wdc.no_witness_dependency_regression
wdc.self_approval_of_witness_resources
```

Scan result:

```
| Artifact | Historical active annotation hits |
|---|---:|
| `03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_2.md` | 0 |
| `SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_3.md` | 0 |
```

5. Canonical vocabulary now used

The active output surfaces now use:

```
wdc.undeclared_dependency_impact
wdc.wrcg_missing_or_failed
wdc.sole_approver_of_witness_change
wdc.witness_resource_floor_degraded
wdc.challenge_survivability_unverified
wdc.challenge_cost_mitigation_missing
wdc.clean_no_dependency_impact
wdc.clean_with_gates
wdc.relevance_unknown
```

6. What changed in 03

03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_2.md changes:

1. metadata and supersession state updated to v0.1.2;
2. textual harmonization note added;
3. examples use canonical 04 WDC annotations;
4. fixture handoff now mirrors the canonical 08 WDC fixture family;
5. no schema fields, required fields, trigger predicates, WRCG/CST result enums, red lines, or authority boundaries changed.

7. What changed in the patch index

SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_3.md changes:

1. metadata and supersession state updated to v0.1.2;
2. WDC-LC rule table now matches canonical 04 result/severity/annotation vocabulary;
3. fixture candidates now match the accepted 08 fixture family;
4. implementation sketch emits canonical 04 annotations only;
5. WDC-ASM-002 closure section added;
6. no package release, integration, conformance, or deployment claim added.

8. Remaining package gates

This record does not close the full package assembly. Remaining gates still include:

```
WDC-ASM-001 – package placement / source map / SHA map / citation map
WDC-ASM-003 – 07 WRCG/CST projection verification
```

WDC-ASM-004 – 08 fixture gate
 WDC-ASM-005 – boundary / nonclaim scan
 WDC-ASM-006 – remaining implementation open issues without overclaiming

This record creates a reviewable candidate for closing:

WDC-ASM-002 – 03/index annotation harmonization to canonical 04 vocabulary

9. v0.1.1 hash-binding correction

This append-first correction closes WDC-ASM-002-REV-F1 by binding the harmonized patch index to the actual corrected file and by relying on the corrected internal SELF-EVO-03 hash citation in SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_3.md.

Correct final harmonized hashes for this gate candidate:

```
| Artifact | SHA-256 | Lines |
|---|---|---:|
| `03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_2.md` |
| `5a7e6af6bc83d3b7ccde875eae1a0e928600cf509b494bd773c43c29537264f3` | 1003 |
| `SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_3.md` |
| `af01b1b443a87c111ab7dab2e001d01e8bffc0710362b89da7781238447ea28b` | 856 |
```

This correction is provenance-only for the harmonization record and patch-index metadata. It does not change the WDC rule semantics, canonical vocabulary, schema fields, fixture expectations, gates, or release boundary.

10. Review requirement

Required next artifact:

WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1_1.md

The review must verify:

1. the new 03 and patch index hashes;
2. absence of historical active annotation strings in both artifacts;
3. direct use of canonical 04 vocabulary;
4. fixture candidates match 08 canonical expected outputs;
5. no PASS_WITH_LIMITS appears as a checker or fixture output;
6. no new release, conformance, witness-independence, or deployment claim was introduced.

11. Closing

WDC-ASM-002 textual harmonization candidate prepared.
 03 and patch index no longer need a final-package crosswalk for active WDC annotations.
 Review still required.
 No package assembly performed.
 No release performed.
