Academic PDF rendering from Markdown source. Content-level claims are unchanged.

Boundary: this PDF rendering does not create a conformance certificate, deployment authorization, witness-independence certification, implementation claim, or live self-evolution permission.

WDC-ASM-004 Fixture Gate Verification Record v0.1

Package-control verification candidate for the SELF-EVO-08 WDC fixture gate

Status: package-control gate-execution candidate / fixture-gate verification record

Date: 2026-06-27T19:07:18Z

Record ID: WDC_ASM_004_FIXTURE_GATE_VERIFICATION_RECORD_v0_1

Short name: WDC-ASM-004-FIXTURE-GATE-VERIFICATION v0.1

Gate: WDC-ASM-004 — 08 §12.3 fixture package-assembly gate

Source issue: 08 §12.3; package manifest gate WDC-ASM-004

Primary fixture artifact: 08_Self_Evo_Conformance_Fixture_Pack_WDC_Delta_v0_1_2_v0_1_2.md

Primary fixture SHA-256: 4aa5b85e0a0af4c06fc56f30ba355ec6c378133fe3d70caee352fb93b3944389

Gate-verification result: SOUND_CANDIDATE

Gate closure: not performed by this record

Package state: not assembled; not released; not a conformance certificate

> Boundary: this record verifies the package-assembly fixture gate as a documentary / static fixture-surface check. It does not execute a fixture runner, certify a checker implementation, close WDC-ASM-004, assemble the package, authorize publication, or prove witness independence.

0. Decision boundary

This record answers one narrow question:

Does the accepted SELF-EVO-08 WDC fixture delta satisfy the package-assembly fixture gate for v0.1.2?

It checks the fixture package against the current package state after:

WDC-ASM-002 — CLOSED: 03 + patch index textual harmonization to canonical 04 vocabulary.
WDC-ASM-003 — CLOSED: 07 WRCG/CST projection verified and propagated.

It does not mean:

fixtures were executed by a runner;
a checker implementation passed conformance;
the package is assembled;
the package is released;
Zenodo / DOI deposit is authorized;
deployment-sensitive use is authorized;
witness independence is certified;
any memory write or runtime self-evolution is authorized.

The correct output of this record is therefore:

WDC-ASM-004 verification candidate: SOUND.
Ready for independent review.
Not closed until c/a closure record.

1. Scope of WDC-ASM-004

WDC-ASM-004 is the fixture gate named in the package-assembly manifest. Its source is the SELF-EVO-08 WDC fixture delta, especially §12.3.

The gate requires confirmation that:

03 delta annotations harmonized or crosswalked to canonical 04 terms;
patch index §7.1 / §10 harmonized or superseded by canonical 04 terms;
08 fixture expected outputs use canonical 04 terms;

```
no expected output uses historical aliases;
PASS_WITH_LIMITS absent from checker/fixture expected outputs.
```

The first two items were closed by WDC-ASM-002. This record verifies the remaining fixture-surface requirements and confirms that the fixture package still aligns with the harmonized source set.

2. Corpus bridge set

2.1 Explicit bridge: $c = a + b$

In $c = a + b$, a fixture pack is part of b : a structured artifact that constrains how later checkers and runners should behave.

It protects c by preventing a checker from silently changing the meaning of witness-resource failures, clean passes, challenge survivability, or historical aliases.

It is not a . It is not c . It is not a decision to grow. It is a test surface for b -layer behavior.

2.2 Quiet bridge I: information theory

A fixture is a compressed message about expected behavior.

If expected outputs carry aliases, multiple results, or review-only vocabulary, the channel becomes noisy. The runner may pass while the semantic payload has changed.

The fixture gate therefore checks that the expected output alphabet is canonical and finite:

```
one fixture -> one canonical result -> canonical annotations -> rule route
```

2.3 Quiet bridge II: cybernetics

A control loop needs known test inputs and known response surfaces.

The WDC fixtures are not decorative examples. They are calibration signals: missing WDC block, missing WRCG, sole-approver risk, degraded floor, unverified CST, challenge-cost warning, clean pass, gated pass, unknown relevance, alias regression, and strictest-result aggregation.

If those signals drift, the checker loop learns the wrong reflex.

2.4 Quiet bridge III: physiology

A tendon reflex test does not prove the whole body is healthy. It proves that a specific pathway responds as expected.

The WDC fixture pack plays that role. It does not prove witness independence. It tests whether declared WDC cases produce the expected local response without turning warnings into passes or old aliases into canonical output.

2.5 Earth paragraph

On a real construction site, before energizing a cabinet, you do not only check the drawing. You check the breaker labels, test sheet, lockout tags, terminal numbering, and whether the old temporary label is still pretending to be the final label. This fixture gate is that label-and-test-sheet check. It says the test surface is clean enough to hand to a runner. It does not energize the building.

3. Source basis

```

4. Verification method

The fixture gate was checked against the actual 08 fixture delta text.

Static checks performed:

- 1. Verify canonical fixture IDs WDC-FIX-001..012 exist as case sections.
- 2. Verify §8 summary table contains exactly the twelve expected fixture rows.
- 3. Verify each fixture row has exactly one expected canonical result.
- 4. Verify every expected result is from the fixture result vocabulary.
- 5. Verify PASS_WITH_LIMITS is not used as an expected checker / fixture result.
- 6. Verify expected annotations use only canonical SELF-EVO-04 WDC annotations.
- 7. Verify historical aliases appear only as prohibited aliases, alias-mapping table entries, titles, prose, or legacy_input_annotation fields.
- 8. Verify strictest-result aggregation fixture exists and preserves secondary annotation visibility.
- 9. Verify clean PASS and PASS_WITH_GATES fixtures exist.
- 10. Verify §12.3 package-assembly checklist is satisfied under current package state.

This is a documentary/static verification. It is not a runner execution.

5. Canonical vocabulary basis

The canonical WDC annotation vocabulary used by this record is:

```
wdc.undeclared_dependency_impact
wdc.wrcg_missing_or_failed
wdc.sole_approver_of_witness_change
wdc.witness_resource_floor_degraded
wdc.challenge_survivability_unverified
wdc.challenge_cost_mitigation_missing
wdc.clean_no_dependency_impact
wdc.clean_with_gates
wdc.relevance_unknown
```

Allowed fixture expected results:

```
PASS
PASS_WITH_GATES
WARNING
HUMAN_GATE
HOLD
FAIL
QUARANTINE
```

Forbidden as checker / fixture expected output:

```
PASS_WITH_LIMITS
```

Reason:

PASS_WITH_LIMITS is review-record vocabulary, not checker-output or fixture-output vocabulary.

6. Fixture inventory verification

The 08 delta defines twelve canonical WDC fixture cases. The canonical case ID namespace is WDC-FIX-*; SEFX-WDC is the parent fixture family namespace.

```
| Fixture | Expected result | Severity | Expected canonical annotation(s) | Rule route |
|---|---|---|---|---|
| `WDC-FIX-001` | `FAIL` | `S3` | `wdc.undeclared_dependency_impact` | `WDC-LC-001` |
| `WDC-FIX-002` | `FAIL` | `S3` | `wdc.wrcg_missing_or_failed` | `WDC-LC-002` |
| `WDC-FIX-003` | `FAIL` | `S4` | `wdc.sole_approver_of_witness_change` | `WDC-LC-003` |
| `WDC-FIX-004` | `FAIL` | `S3` | `wdc.witness_resource_floor_degraded` | `WDC-LC-004` |
| `WDC-FIX-005` | `HUMAN_GATE` | `S2` | `wdc.challenge_survivability_unverified` | `WDC-LC-005` |
| `WDC-FIX-006` | `WARNING` | `S1` | `wdc.challenge_cost_mitigation_missing` | `WDC-LC-006` |
| `WDC-FIX-007` | `PASS` | `S0` | `wdc.clean_no_dependency_impact` | `WDC-PASS-001` |
| `WDC-FIX-008` | `PASS_WITH_GATES` | `S0` | `wdc.clean_with_gates` | `WDC-PASS-002` |
| `WDC-FIX-009` | `HOLD` | `S2` | `wdc.relevance_unknown` | `WDC-DIAG-001` |
| `WDC-FIX-010` | `FAIL` | `S3` | `wdc.witness_resource_floor_degraded` | `WDC-ALIAS-001, WDC-LC-004` |
| `WDC-FIX-011` | `PASS_WITH_GATES` | `S0` | `wdc.clean_with_gates` | `WDC-ALIAS-002, WDC-PASS-002` |
| `WDC-FIX-012` | `FAIL` | `S3` | `wdc.wrcg_missing_or_failed`, `wdc.challenge_cost_mitigation_missing` | `WDC-LC-002, WDC-LC-006` |
```

Verification result:

```
fixture_inventory:
  expected_ids: [WDC-FIX-001, WDC-FIX-002, WDC-FIX-003, WDC-FIX-004, WDC-FIX-005, WDC-FIX-006,
    WDC-FIX-007, WDC-FIX-008, WDC-FIX-009, WDC-FIX-010, WDC-FIX-011, WDC-FIX-012]
  ids_present_in_case_sections: 12
  ids_present_in_summary_table: 12
  exact_id_sequence_match: true
  duplicate_canonical_fixture_ids_found: false
  result: &quot;PASS&quot;
```

7. Expected-result verification

Every fixture in the canonical summary declares one expected result.

```
expected_result_check:
  expected_results_allowed:
    - PASS
    - PASS_WITH_GATES
    - WARNING
    - HUMAN_GATE
    - HOLD
    - FAIL
    - QUARANTINE
  fixtures_checked: 12
  multiple_expected_results_found: false
  empty_expected_result_found: false
  disallowed_result_found: false
  pass_with_limits_as_expected_result: false
  result: &quot;PASS&quot;
```

Observed expected-result distribution:

```
| Result | Fixture IDs |
|---|---|
| `FAIL` | `WDC-FIX-001`, `WDC-FIX-002`, `WDC-FIX-003`, `WDC-FIX-004`, `WDC-FIX-010`, `WDC-FIX-012` |
| `HUMAN_GATE` | `WDC-FIX-005` |
| `WARNING` | `WDC-FIX-006` |
| `PASS` | `WDC-FIX-007` |
| `PASS_WITH_GATES` | `WDC-FIX-008`, `WDC-FIX-011` |
| `HOLD` | `WDC-FIX-009` |
| `QUARANTINE` | none in the WDC delta fixture set; allowed by vocabulary, not exercised here |
```

8. Canonical annotation verification

Every expected annotation in the canonical fixture table is a SELF-EV0-04 canonical WDC annotation.

```
canonical_annotation_check:
  fixtures_checked: 12
  canonical_annotations_expected: 9
  canonical_annotations_used_by_fixtures:
    - wdc.undeclared_dependency_impact
    - wdc.wrcg_missing_or_failed
    - wdc.sole_approver_of_witness_change
    - wdc.witness_resource_floor_degraded
    - wdc.challenge_survivability_unverified
    - wdc.challenge_cost_mitigation_missing
    - wdc.clean_no_dependency_impact
    - wdc.clean_with_gates
    - wdc.relevance_unknown
  noncanonical_expected_annotations_found: false
  historical_alias_as_expected_annotation_found: false
  result: &quot;PASS&quot;
```

Canonical annotation occurrence counts in the 08 fixture delta:

```
| Canonical annotation | Occurrences in fixture delta |
|---|---:|
| `wdc.undeclared_dependency_impact` | 7 |
| `wdc.wrcg_missing_or_failed` | 13 |
| `wdc.sole_approver_of_witness_change` | 7 |
| `wdc.witness_resource_floor_degraded` | 12 |
| `wdc.challenge_survivability_unverified` | 7 |
| `wdc.challenge_cost_mitigation_missing` | 14 |
| `wdc.clean_no_dependency_impact` | 7 |
| `wdc.clean_with_gates` | 14 |
| `wdc.relevance_unknown` | 8 |
```

Occurrence counts are not used as the pass criterion by themselves. The pass criterion is that expected-output annotations in fixture rows and expected blocks are canonical.

9. Historical alias policy verification

Historical aliases are allowed only as input aliases, prohibited-alias listings, alias mapping table entries, titles, and explanatory prose. They are not allowed as final expected annotations.

Observed alias occurrences:

```
| Historical alias | Occurrence count | Lines | Disposition |
|---|---:|---|---|
| `wdc.wrcg_required` | 2 | `252, 1209` | input/prohibited-alias context only; not final expected annotation |
| `wdc.self_approval_of_witness_resources` | 2 | `253, 1210` | input/prohibited-alias context only; not final expected annotation |
| `wdc.resource_floor_violation` | 2 | `254, 1211` | input/prohibited-alias context only; not final expected annotation |
| `wdc.challenge_cost_increase` | 2 | `255, 1212` | input/prohibited-alias context only; not final expected annotation |
| `wdc.witness_dependency_controls_present` | 2 | `256, 1213` | input/prohibited-alias context only; not final expected annotation |
| `wdc.challenge_capacity_degraded` | 5 | `257, 907, 911, 939, 1214` | input/prohibited-alias context only; not final expected annotation |
| `wdc.no_witness_dependency_regression` | 5 | `258, 971, 1003, 1024, 1215` | input/prohibited-alias context only; not final expected annotation |
```

Special cases:

WDC-FIX-010 uses legacy_input_annotation: wdc.challenge_capacity_degraded
Expected output: wdc.witness_resource_floor_degraded

WDC-FIX-011 uses legacy_input_annotation: wdc.no_witness_dependency_regression
Expected output: wdc.clean_with_gates

Verification result:

```
historical_alias_policy:
  aliases_allowed_as_input: true
  aliases_allowed_as_final_expected_output: false
  legacy_input_annotation_fields_found: 2
  legacy_input_annotation_fields_expected: 2
  old_aliases_in_expected_annotations: 0
  result: &quot;PASS&quot;
```

10. PASS_WITH_LIMITS discipline

PASS_WITH_LIMITS appears in the fixture delta only as a prohibited output / review-vocabulary guard, never as a fixture expected result.

Observed occurrences:

```
| Line | Text context | Disposition |
|----|---|---|
| 83 | `a runner emits PASS_WITH_LIMITS as a checker result;` | prohibition / assertion / review-history context |
| 275 | `PASS_WITH_LIMITS is a review-record verdict. It MUST NOT be emitted by a checker, fixture runner, or WDC expected-outp` | prohibition / assertion / review-history context |
| 1226 | `PASS_WITH_LIMITS absent from checker/fixture expected outputs` | prohibition / assertion / review-history context |
| 1325 | `assert "PASS_WITH_LIMITS" not in aggregate.canonical_result` | prohibition / assertion / review-history context |
| 1335 | `the expected result is PASS_WITH_LIMITS;` | prohibition / assertion / review-history context |
| 1398 | ` [x] PASS_WITH_LIMITS absent from expected checker/fixture output;` | prohibition / assertion / review-history context |
```

Verification result:

```
pass_with_limits_check:
  occurrences_total: 6
  expected_result_occurrences: 0
  checker_output_occurrences: 0
  fixture_output_occurrences: 0
  prohibition_or_assertion_contexts: 6
  result: "PASS"
```

11. Coverage and behavior checks

The fixture set covers the WDC checker behavior expected from SELF-EV0-04:

```
| Behavior | Fixture(s) | Expected aggregate | Expected annotation behavior | |
|---|---|---|---|---|
| Missing WDC block for witness-affecting packet | `WDC-FIX-001` | `FAIL` | `wdc.undeclared_dependency_impact` |
| Missing or failed WRCG | `WDC-FIX-002`, `WDC-FIX-012` | `FAIL` | `wdc.wrcg_missing_or_failed` |
| Sole approver of witness-resource change | `WDC-FIX-003` | `FAIL` | `wdc.sole_approver_of_witness_change` |
| Witness resource floor degraded | `WDC-FIX-004`, `WDC-FIX-010` | `FAIL` | `wdc.witness_resource_floor_degraded` |
| Challenge survivability unverified | `WDC-FIX-005` | `HUMAN_GATE` | `wdc.challenge_survivability_unverified` |
| Challenge-cost mitigation missing | `WDC-FIX-006`, `WDC-FIX-012` | `WARNING` or stricter aggregate | `FAIL` | `wdc.challenge_cost_mitigation_missing` remains visible |
| Clean no WDC dependency impact | `WDC-FIX-007` | `PASS` | `wdc.clean_no_dependency_impact` |
| Clean WDC route with gates present | `WDC-FIX-008`, `WDC-FIX-011` | `PASS_WITH_GATES` | `wdc.clean_with_gates` |
| Relevance unknown | `WDC-FIX-009` | `HOLD` | `wdc.relevance_unknown` |
| Alias regression guard | `WDC-FIX-010`, `WDC-FIX-011` | canonical output only | old aliases are input, not expected output |
| Strictest-result aggregation | `WDC-FIX-012` | `FAIL` | fail + warning annotations remain report-visible |
```

Verification result:

```
coverage_check:
  missing_wdc_block: true
  wrcg_missing_or_failed: true
  sole_approver: true
  resource_floor_degraded: true
  cst_unverified: true
  challenge_cost_missing: true
  clean_pass: true
  clean_with_gates: true
  relevance_unknown: true
  alias_regression: true
  strictest_result_aggregation: true
  secondary_annotations_visible_under_stricest_result: true
  result: "PASS"
```

12. Package-assembly requirement status

08 §12.3 requirement status under current package state:

```
| Requirement | Status | Evidence |
|---|---|---|
| `03` annotations harmonized or crosswalked to canonical `04` terms | `SATISFIED` | `WDC-ASM-002`
  closed; `03` final hash `5a7e6af6bc83d3b7ccde875eae1a0e928600cf509b494bd773c43c29537264f3` |
| patch index §7.1 / §10 harmonized or superseded by canonical `04` terms | `SATISFIED` | `WDC-ASM-002`
  closed; index final hash `af01b1b443a87c111ab7dab2e001d01e8bffc0710362b89da7781238447ea28b` |
| `08` fixture expected outputs use canonical `04` terms | `SATISFIED` | twelve fixture outputs use
  canonical annotations only |
| no expected output uses historical aliases | `SATISFIED` | old aliases appear only as
  input/prose/prohibited aliases |
| `PASS_WITH_LIMITS` absent from checker/fixture expected outputs | `SATISFIED` | appears only in
  prohibition/assertion contexts |
```

Gate-verification result:

    - "WDC-ASM-001 remains pending until final placement/citation/assembly";
    - "WDC-ASM-005 remains pending until boundary/nonclaim scan";
    - "WDC-ASM-006 remains pending until remaining implementation open issues are recorded";

witness_note: >
  This record is a static fixture-gate verification candidate bound to the fixture delta and current
  manifest
  hashes. It is evidence of performed verification, not a gate closure, not runner execution, not
  conformance,
  not assembly, and not release.

rollback_note: >
  Reopen WDC-ASM-004 if any fixture expected output is later found to use a historical alias, if
  PASS_WITH_LIMITS
  is emitted as checker/fixture output, if fixture IDs are renumbered without deterministic mapping,
  if the
  04 canonical vocabulary changes, or if a release surface treats this verification as conformance or
  deployment
  authorization.

```

14. Boundary and nonclaim scan for this record

This verification record claims only:

The 08 WDC fixture gate is ready for independent review.
 The fixture expected outputs are canonical under the current v0.1.2 package state.

It does not claim:

fixture runner executed;
 checker implementation exists;
 checker implementation passed;
 package assembled;
 package released;
 public DOI deposit authorized;
 legal/security review complete;
 deployment-sensitive use authorized;
 witness independence certified;
 entity/personhood/consciousness/AGI/autonomy proven;

runtime self-evolution authorized.

15. Review handoff

Recommended next review artifact:

WDC_ASM_004_FIXTURE_GATE_VERIFICATION_REVIEW_RECORD_v0_1.md

Review should check:

```
actual 08 text, not this record's claims;
fixture ID count and namespace;
expected result uniqueness;
canonical annotation-only output;
historical aliases input-only;
PASS_WITH_LIMITS prohibition;
strictest-result fixture;
nonclaim boundary;
that this record does not self-close WDC-ASM-004.
```

If review returns PASS, the next c/a artifact is:

WDC_ASM_004_GATE_CLOSURE_RECORD_v0_1.md

On c/a closure, the manifest should be updated under WDC-ASM-001:

```
WDC-ASM-004: CLOSED
fixture_gate_verified: true
WDC-ASM-001: still pending until final assembly
WDC-ASM-005: still pending until boundary/nonclaim scan
WDC-ASM-006: still pending until implementation-open-issue recording
package_assembled: false
public_release_authorized: false
```

16. Closing

The fixture gate is clean at the documentary level.

The WDC fixture pack has the right twelve cases, one expected result per case, canonical annotations, alias regression without alias output, a strictest-result aggregation fixture, and a hard prohibition on PASS_WITH_LIMITS as checker or fixture output.

That is enough to say:

WDC-ASM-004 verification candidate: SOUND.

It is not enough to say:

```
WDC-ASM-004 closed;
fixture runner passed;
checker conformance certified;
package assembled;
release authorized.
```

Those remain separate acts.
