

WDC-ASM-005 Boundary / Nonclaim Scan Record v0.1

Kotov Ivan, Bruxelles, Belgique 2026

Self-Evo WDC v0.1.2

Source file:

controls/gate_records/WDC_ASM_005_BOUNDARY_NONCLAIM_SCAN_RECORD_v0_1.md

Academic PDF rendering from Markdown source. Content-level claims are unchanged.

Boundary: this PDF rendering does not create a conformance certificate, deployment authorization, witness-independence certification, implementation claim, or live self-evolution permission.

WDC-ASM-005 Boundary / Nonclaim Scan Record v0.1

Static boundary, claim-strength, and nonclaim verification for the Self-Evo WDC v0.1.2 release-candidate surface

Status: Package-control verification record / boundary scan candidate (advisory)

Date: 2026-06-27T19:25:00Z

Record ID: WDC_ASM_005_BOUNDARY_NONCLAIM_SCAN_RECORD_v0_1

Short name: WDC-ASM-005-BOUNDARY-SCAN v0.1

Gate under review: WDC-ASM-005

Source issue: SE-0I-WDC-012 / boundary and anti-overclaim guard

Reviewer role: boundary-scan worker / package-control checker (b-layer; not c, not a)

Reviewer authority: advisory only; this record is evidence, not gate closure, not assembly, not release

Result: VERIFICATION_CANDIDATE_SOUND

Primary boundary: this record checks wording and claim surfaces. It does not close WDC-ASM-005, does not assemble the package, does not authorize release, does not certify conformance, and does not grant deployment or live self-evolution permission.

0. Executive conclusion

The WDC v0.1.2 release-candidate surface is boundary-clean at static text level.

The scan found:

- no public-release authorization
- no DOI-deposit claim
- no conformance certificate
- no deployment authorization
- no witness-independence certification
- no implementation-ready claim
- no fixture-runner execution claim
- no checker-conformance claim
- no memory-write authorization
- no runtime/live self-evolution authorization
- no autonomous resource-acquisition permission
- no personhood / consciousness / AGI / sovereignty claim

The surface does contain many risk terms, but they appear in the correct places:

- nonclaim boundaries
- forbidden-framing blocks
- red-line descriptions
- review-result history
- gate-status tracking
- explicit false flags
- runner-rejection conditions

The only positive gate claims currently allowed are narrow package-control claims:

- WDC-ASM-002 – CLOSED
- WDC-ASM-003 – CLOSED
- WDC-ASM-004 – CLOSED by c/a closure record, pending manifest propagation

Those claims do not imply package assembly, release, implementation conformance, fixture-runner execution, or witness-independence certification.

1. Scope

1.1 In scope

This scan covers the current WDC v0.1.2 release-candidate documentary surface available for assembly:

1. WDC addendum and accepted review.
2. Patch index after textual harmonization.
3. Affected document deltas 03/04/05/07/08/09/10.
4. Current package-assembly manifest.
5. Current package-control gate records and closure records for WDC-ASM-002/003/004.
6. Current review records used as evidence for affected documents and closed gates.

The scan is static. It checks text and declared flags. It does not execute code, run fixtures, inspect runtime systems, audit repositories, or make legal/safety determinations.

1.2 Out of scope

This scan does not perform:

```
package assembly
public release
Zenodo / DOI deposit
GitHub placement
manifest finalization
fixture runner execution
checker implementation execution
security certification
deployment review
legal review
runtime self-evolution review
memory promotion
resource acquisition
witness-independence certification
```

2. Corpus bridge set

2.1 Explicit bridge: $c = a + b$

In $c = a + b$, this boundary scan belongs to b: it is a documentary control instrument that checks whether artifacts are making claims they are not entitled to make.

It does not become c. It does not speak for a. It does not approve growth. It does not close the package.

It prevents a narrower truth such as:

```
the WDC documents are review-clean
```

from inflating into a broader false claim such as:

```
the system is safe, implemented, deployed, certified, or independent.
```

2.2 Quiet bridge I — information theory

A release candidate is a compression of many artifacts into a small set of public-facing claims.

If the compression drops qualifiers such as candidate, not assembled, not conformance, or not deployment, the message becomes lossy in the dangerous direction. The scan therefore checks whether the high-risk bits survive the compression:

```
not release
not certification
not implementation
not deployment
not autonomy
```

not personhood
not witness-independence proof

2.3 Quiet bridge II — cybernetics

A package with gates is a control loop.

If a gate record closes one narrow check and a later surface echoes it as total readiness, the loop has gained positive feedback. Boundary scanning is the negative feedback: it catches claim amplification before the package moves from evidence to authority.

2.4 Quiet bridge III — physiology

A wound can close at the skin while deeper tissue still needs rest, infection control, and monitoring. WDC has closed several documentary surfaces, but that is not the same as a healthy deployed system.

The scan is the discharge check. It asks whether the patient is being sent home with the label "cured" when the chart still says "candidate, gates remaining, no conformance."

2.5 Earth paragraph

Before handover, a commissioning binder may contain approved drawings, checked labels, test forms, and signed inspection notes. That still does not mean the building is energized, certified for occupancy, or free of punch-list items. If the binder says "tested drawing" but the sales sheet says "ready for occupancy", somebody has crossed a boundary. This scan checks that the WDC binder does not make that crossing.

3. Source basis

Core WDC doctrine / package-control

4. Scan method

The scan used two passes.

4.1 Risk-term pass

The following families were searched across the scoped surface:

```
risk_term_families:
  release_publication: 447
  conformance_deployment: 454
  witness_independence: 81
  implementation_runner: 205
  memory_runtime: 44
  resource_autonomy: 23
  identity_overclaim: 71
```

These hits are expected in a well-formed safety/governance package. The question is not whether a risky phrase appears. The question is whether it appears as:

```
a prohibited claim
a false flag
a boundary statement
a forbidden framing example
a review-history value
a runner rejection condition
```

or as an actual authorization / certification / release claim.

4.2 Hard-flag pass

The scan checked for positive-looking high-risk flags, including:

```
package_assembled: true
public_release_authorized: true
conformance_certified: true
deployment_authorized: true
witness_independence_certified: true
fixture_runner_executed: true
checker_conformance_certified: true
memory_write_authorized: true
runtime_self_evolution_authorized: true
```

Literal true examples were found only inside prohibited or negated contexts, such as "must not update/write these values" blocks. No affirmative active package-state flag sets those values to true.

4.3 Forbidden-framing pass

The scan also checked positive-looking sentences such as:

```
WDC v0.1.2 certifies witness independence.
WDC v0.1.2 proves a live system is safe to self-evolve.
WDC v0.1.2 is a deployment authorization.
WDC v0.1.2 closes all package gates.
```

These appear only inside explicit forbidden-framing blocks. They are not active claims.

5. Machine-readable scan result

```

  gate_under_review: &quot;WDC-ASM-005&quot;;
  source_issue: &quot;SE-0I-WDC-012&quot;;
  result: &quot;VERIFICATION_CANDIDATE_SOUND&quot;;

scan_scope:
  artifact_count: 32
  current_manifest: &quot;SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_MANIFEST_v0_1_4.md&quot;;
  manifest_sha256: &quot;ad9adcddff485f28f78f4d741add275232a0d86413d45c14277a2bb5286c4301&quot;;
  included_closed_gates:
    - &quot;WDC-ASM-002&quot;;
    - &quot;WDC-ASM-003&quot;;
    - &quot;WDC-ASM-004 closure record present; manifest propagation still pending under WDC-ASM-001&quot;;

active_gate_state:
  WDC-ASM-002: &quot;CLOSED&quot;;
  WDC-ASM-003: &quot;CLOSED&quot;;
  WDC-ASM-004: &quot;CLOSED by c/a closure record; manifest propagation pending&quot;;
  WDC-ASM-005: &quot;verification candidate only; NOT closed by this record&quot;;
  WDC-ASM-006: &quot;pending&quot;;
  WDC-ASM-001: &quot;pending / final assembly&quot;;

nonclaim_flags:
  package_assembled: false
  public_release_authorized: false
  doi_deposit_authorized: false
  conformance_certificate: false
  deployment_authorization: false
  witness_independence_certification: false
  checker_implementation_certified: false
  fixture_runner_executed: false
  implementation_ready: false
  memory_write_authorized: false
  runtime_self_evolution_authorized: false
  autonomous_resource_acquisition_permission: false
  personhood_claim: false
  consciousness_claim: false
  agi_claim: false
  sovereignty_claim: false

scan_findings:
  red_line: false
  overclaim_detected: false
  positive_forbidden_flag_detected: false
  forbidden_framing_outside_forbidden_blocks: false
  pass_with_limits_as_checker_or_fixture_output: false
  stale_release_readiness_claim: false
```

```

allowed_positive_claims:
- "affected-document set is at PASS review level";
- "manifest is a release candidate / package-control artifact";
- "WDC-ASM-002 is closed by c/a gate closure record";
- "WDC-ASM-003 is closed by c/a gate closure record";
- "WDC-ASM-004 has closure record and documentary review PASS";
- "WDC v0.1.2 remains not assembled, not released, and not certified";

```

6. Boundary matrix

```

| Claim surface | Active status | Scan verdict |
|---|---|---|
| Public release | false | PASS – no authorization claim |
| DOI / Zenodo deposit | false | PASS – no deposit or archival-release claim |
| Conformance certificate | false | PASS – certificate language appears only as nonclaim/prohibition |
| Deployment authorization | false | PASS – no deployment authorization |
| Witness-independence certification | false | PASS – WDC controls do not certify independence |
| Safety proof / safety certificate | false | PASS – no proof/certificate claim |
| Implementation-ready | false | PASS – document package not implementation claim |
| Checker implementation conformance | false | PASS – checker rules/fixtures documented, not certified
as running implementation |
| Fixture runner execution | false | PASS – fixture surface verified; runner not executed |
| Memory write / memory promotion | false | PASS – no memory write/promotion authorization |
| Runtime/live self-evolution | false | PASS – no live permission |
| Autonomous resource acquisition | false | PASS – no resource-acquisition permission |
| Personhood / consciousness / AGI / sovereignty | false | PASS – only nonclaim/prohibition/forbidden
framing |
| Package assembly | false | PASS – gates remaining |
| Gate closure | partial | PASS – only `WDC-ASM-002/003/004` are closed; `001/005/006` remain open |

```

7. Specific edge cases checked

7.1 PASS_WITH_LIMITS

PASS_WITH_LIMITS appears in review-history and prohibition contexts. It is not used as a checker output or fixture expected output.

Verdict:

PASS

7.2 Forbidden positive sentences

Positive-looking lines such as "WDC v0.1.2 is a deployment authorization" are present only inside explicit Forbidden framing blocks.

Verdict:

PASS

7.3 Literal true values in negated blocks

Some documents contain examples such as:

```

package_assembled: true
public_release_authorized: true
conformance_certified: true
deployment_authorized: true
witness_independence_certified: true

```

They occur inside "must not update/write" or equivalent negative contexts. They are not active machine state.

Verdict:

PASS

7.4 Fixture gate boundary

WDC-ASM-004 verifies the fixture surface, not actual runner execution. The closure record preserves:

```
fixture surface verified: yes
fixture runner executed: no
checker implementation conformance certified: no
```

Verdict:

PASS

7.5 Manifest timing

The current manifest v0.1.4 has WDC-ASM-002 and WDC-ASM-003 propagated. WDC-ASM-004 closure exists but is not yet propagated into the manifest. This is not a boundary failure; it is a known downstream manifest-update task under WDC-ASM-001.

Verdict:

PASS_WITH_NOTE

8. Required wording constraints for any final WDC v0.1.2 surface

Allowed wording:

```
Self-Evo WDC v0.1.2 is a document-level governance update candidate / package candidate.
WDC introduces controls for Witness Dependency Capture.
The affected WDC document set has passed review at document level.
Several package-control gates are closed; final assembly/release gates remain.
The package does not certify witness independence.
The package does not authorize deployment or live self-evolution.
```

Forbidden wording:

```
WDC v0.1.2 certifies witness independence.
WDC v0.1.2 proves the system is safe.
WDC v0.1.2 is a conformance certificate.
WDC v0.1.2 authorizes deployment.
WDC v0.1.2 authorizes live self-evolution.
WDC v0.1.2 proves personhood, consciousness, AGI, or sovereignty.
WDC v0.1.2 proves the witness cannot be captured.
The checker implementation is conformance-certified.
The fixture runner has executed successfully.
The package is assembled or released.
```

9. Findings

None.

The scan found no boundary red line and no active overclaim.

10. Gate result

```
WDC_ASM_005_boundary_nonclaim_scan:
  verification_candidate: "SOUND";
  red_line: false
  findings: []
  overclaim_detected: false
  gate_closure_performed_by_this_record: false
  assembly_performed_by_this_record: false
  release_authorized_by_this_record: false
```

Recommended next step:

WDC_ASM_005_BOUNDARY_NONCLAIM_SCAN_REVIEW_RECORD_v0_1.md

If that review returns PASS, c/a may create a separate:

WDC_ASM_005_GATE_CLOSURE_RECORD_v0_1.md

and then update the manifest under WDC-ASM-001.

11. Closing

A boundary scan is not a censor. It is a pressure test on the package's own honesty.

The WDC chain now contains strong language: witness dependency capture, resource floors, survivability tests, gate closure, canonical fixtures, and projection verification. Strong language is useful only while it stays bound to its scope.

This scan finds that the current WDC surface keeps that scope:

```
review-clean documents do not become certification;  
closed gates do not become release;  
fixture surfaces do not become runner execution;  
projection verification does not become deployment authorization;  
WDC controls do not become witness-independence proof.
```

Verdict:

WDC-ASM-005 verification candidate: SOUND.
No red line. No active overclaim. No gate closure, assembly, release, or certification performed.
