SEARG-WDC Delta Patch Notes v0.1.1

Patch notes for 07_Self_Evo_Anti_Autarky_and_Resource_Gate_WDC_Delta_v0_1_2_v0_1_1

Status: Patch notes / control-layer artifact

Date: 2026-06-27

Patch ID: SEARG_WDC_DELTA_PATCH_NOTES_v0_1_1

Patched artifact: 07_Self_Evo_Anti_Autarky_and_Resource_Gate_WDC_Delta_v0_1_2_v0_1_1.md

Prior artifact: 07_Self_Evo_Anti_Autarky_and_Resource_Gate_WDC_Delta_v0_1_2.md

Prior review: SEARG_WDC_DELTA_REVIEW_RECORD_v0_1

Prior reviewed SHA-256: 8ef02b23b498efed9618684af355f72c3c853cdf433ae80b970b1e7c7b405b82

New artifact SHA-256: 804a8e341e30a2a86fa43429618f24e62458366e236c7b6ef8c12762d94da7af

0. Patch purpose

This patch closes:

SEARG-WDC-DELTA-REV-F1

from SEARG_WDC_DELTA_REVIEW_RECORD_v0_1.

The review found that the v0.1.2 draft used richer 07-side WRCG/CST result names while also claiming identity consistency with the accepted SELF-EVO-03-WDC packet schema.

This patch resolves the issue by making the relation explicit:

```
07 gate-record result values
  -> project into
03 packet-facing WRCG/CST result enums
  -> while preserving
04 checker canonical results and WDC annotations
```

1. Closed finding

```
| Finding | Status | Closure |
|---|---|---|
| `SEARG-WDC-DELTA-REV-F1` | `CLOSED BY TEXT` | §9.1 now defines projection consistency; §11.2/§11.3
  define WRCG gate-record-to-packet projection; §13.2 defines CST gate-record-to-packet projection;
  `SEARG-WDC-0Q-005` records package-assembly verification. |
```

2. Main textual changes

2.1 Header / status

The document is now marked as:

append-first corrected revision v0.1.1

and the document ID is updated to:

07_Self_Evo_Anti_Autarky_and_Resource_Gate_WDC_Delta_v0_1_2_v0_1_1

2.2 Correction note

A v0.1.1 correction note was added after the core rule.

It states that the revision closes SEARG-WDC-DELTA-REV-F1 and does not weaken WDC rule outcomes, canonical annotations, WRF semantics, CST requirement, WRCG requirement, red lines, examples, or the non-authority boundary.

2.3 §9.1 relation to SELF-EVO-03

The phrase:

consistent with C_SELF_EVO_PROPOSAL_PACKET.witness_dependency_impact

is now defined as:

projection-consistent through §11.2 and §13.2

not identical enum spelling.

2.4 §11.2 / §11.3 WRCG projection

The WRCG table now maps richer 07 gate-record values into accepted 03 packet values:

pass	-> pass
pass_with_gates	-> pass + wdc.clean_with_gates + PASS_WITH_GATES checker route
human_gate	-> human_gate
warning	-> pass + wdc.challenge_cost_mitigation_missing
fail	-> fail
hold	-> not_run + wdc.relevance_unknown
not_run	-> not_run

A hard rule was added:

unprojectable_wrcg_result -> FAIL / wdc.wrcg_missing_or_failed

2.5 §13.2 CST projection

The CST table now maps richer 07 diagnostic values into accepted 03 packet values:

verified	-> pass
unverified	-> not_run + wdc.challenge_survivability_unverified
failed	-> fail
not_applicable	-> not_applicable
unknown	-> not_run + wdc.relevance_unknown
not_run	-> not_run

Material not_run does not become clean pass.

It routes through WDC-LC-005 or stricter.

2.6 §26 open issue

Added:

SEARG-WDC-00-005 – WRCG/CST projection verification

This tracks package-assembly verification of the projection crosswalk.

2.7 §28 checklist and closure map

The drafting checklist now requires preservation of the WRCG/CST projection crosswalks during schema extraction.

A closure map was added:

§28.1 Review-finding closure map for v0.1.1

3. Unchanged surfaces

This patch does not change:

- WDC checker rule results
- canonical SELF-EV0-04-WDC annotations
- WRC classes
- WDC trigger set
- WRF degradation semantics
- CST requirement
- WRCG requirement
- human-anchor review rule
- resource actor grounding rule
- shared infrastructure rule
- red lines
- implementation sketch behavior
- worked-example expected results
- PASS_WITH_LIMITS prohibition
- checker non-authority boundary
- resource-gate non-authority boundary

4. Review expectation

The next artifact should be:

SEARG_WDC_DELTA_REVIEW_RECORD_v0_1_1.md

The review question is narrow:

Does v0.1.1 close SEARG-WDC-DELTA-REV-F1 without introducing regressions?

5. Closing

Patch status: ready for re-review.
Expected convergence: PASS, if the projection crosswalk is accepted.
No integration performed.
No release performed.
Decision remains with c-gate and human anchor a.
