Academic PDF rendering from Markdown source. Content-level claims are unchanged.

Boundary: this PDF rendering does not create a conformance certificate, deployment authorization, witness-independence certification, implementation claim, or live self-evolution permission.

SELF-EVO Addendum 01 — WDC Patch Notes v0.1.1

Patch notes for SELF_EVO_ADDENDUM_01_Witness_Dependency_Capture_Profile_v0_1_1.md

Status: append-first patch notes / advisory control artifact

Date: 2026-06-27

Author: Kotov Ivan

Patch target: SELF_EVO_ADDENDUM_01_Witness_Dependency_Capture_Profile_v0_1_1.md

Corrected artifact: SELF_EVO_ADDENDUM_01_Witness_Dependency_Capture_Profile_v0_1_1.md

Review source: SELF_EVO_ADDENDUM_01_WDC_REVIEW_RECORD_v0_1_1.md

Review result: PASS_WITH_LIMITS

1. Patch boundary

This patch does not mutate the DOI-bound Self-Evo v0.1.1 package.

It creates an append-first corrected addendum revision for the Witness Dependency Capture control surface.

The corrected addendum remains:

```
not integrated into the DOI-bound package
not conformance-tested
not implementation-ready
not deployment authorization
not a safety proof
```

2. Closed review findings

WDC-REV-F1 — closed in v0.1.1

Finding: local-checker additions used severity/prose instead of the canonical Self-Evo checker result enum; WDC-LC-006 used compound “warn or fail”; implementation sketch returned `pass_with_limits(...)`, which belongs to review-record vocabulary.

Patch:

- added canonical checker result enum reference;
- rewrote WDC-LC-001..006 as rule table with canonical result, severity, and typical annotation;
- resolved WDC-LC-006 to WARNING with severity escalation;
- changed implementation sketch to return `pass_with_gates(...)`, `pass_result(...)`, `human_gate(...)`, `warning(...)`, or `fail(...)` as appropriate.

WDC-REV-F2 — closed in v0.1.1

Finding: fixtures and worked example used compound results and PASS_WITH_LIMITS, a review verdict, where checker vocabulary requires a canonical checker result such as PASS_WITH_GATES.

Patch:

- rewrote all WDC fixtures with one canonical_result plus annotations;
- changed fixture conditional pass cases from PASS_WITH_LIMITS to PASS_WITH_GATES;
- added WDC annotation vocabulary;
- rewrote the worked example as one canonical_result: FAIL with triggered rules and annotations.

WDC-REV-F3 — closed in v0.1.1

Finding: addendum referenced Self-Evo v0.1.1 parent files by name only, without SHA-256 source-basis binding.

Patch:

- added source-basis / subject hash table;
- bound SELF-EVO-05, 07, 08, 09, and 10 by accepted v0.1.1 SHA-256;
- recorded parent package DOI, archival ZIP SHA-256, and GitHub package integrity commit.

WDC-REV-N1 — addressed in v0.1.1

Nit: contradiction-register candidate used OPEN / ADDENDUM-RECORDED, where ADDENDUM-RECORDED is not part of the harmonized status vocabulary; bridge set was valid but lean.

Patch:

- changed contradiction status to OPEN;
- moved ADDENDUM-RECORDED to source note rather than status;
- added explicit information-theory bridge describing witness dependency as dissent-channel capacity loss.

3. Remaining state

The corrected artifact should now be ready for re-review.

Expected next review target:

SELF_EVO_ADDENDUM_01_Witness_Dependency_Capture_Profile_v0_1_1.md

Expected review question:

Do WDC-REV-F1, WDC-REV-F2, WDC-REV-F3, and WDC-REV-N1 close cleanly without introducing new red lines?
