3. Changes

3.1 03 WDC schema delta

- updated artifact revision to v0.1.2;
- replaced active WDC annotations in examples and fixture handoff with canonical SELF-EVO-04 terms;
- aligned fixture handoff with accepted SELF-EVO-08 WDC fixture family;
- retained schema fields, required-field set, trigger keys, WRCG/CST result enums, red lines, and non-authority boundary.

3.2 Patch index

- updated artifact revision to v0.1.2;
- replaced WDC-LC table annotations and severities with canonical SELF-EVO-04 values;
- aligned fixture candidate list with accepted SELF-EVO-08 fixtures;
- updated implementation sketch to emit canonical annotations only;
- added WDC-ASM-002 textual harmonization closure section;
- retained no-release, no-conformance, no-deployment, and no-live-self-evo boundary.

4. Nonchanges

This patch does not:

1. assemble the package;

2. close all assembly gates;
3. create a public release;
4. claim conformance;
5. claim implementation readiness;
6. certify witness independence;
7. authorize deployment;
8. alter the canonical SELF-EVO-04 vocabulary;
9. alter the accepted SELF-EVO-08 fixture semantics.

5. Review requirement

WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1_1.md

The review must treat this as a package-control gate candidate, not as a release.

6. Boundary

These patch notes do not close WDC-ASM-002, assemble the package, authorize release, claim conformance, certify witness independence, authorize deployment, or grant live self-evolution permission. They record a corrected gate-execution candidate for re-review.
