Record ID: SELC_WDC_DELTA_REVIEW_RECORD_v0_1_1

Short name: SELC-WDC-DELTA-REVIEW v0.1.1

Reviewer role: semantic reviewer / checker (CGAM b-layer worker; not c, not a)

Reviewer authority: advisory only (QR-AX-02); this record is evidence, not approval, not integration, not memory write

Result: PASS

> Status caveat (inherited from pack): private reference review record. Not a public release. Not a conformance certificate. Not deployment authorization. The prior record is not deleted; this record references it (append-first).

0. Reviewer boundary statement

Produced by a bounded CGAM review worker acting as a semantic reviewer / checker. It did not author the reviewed artifact (QR-AX-01); it does not approve, integrate, or write memory (AX-03, AX-04, QR-AX-02); the verdict is advisory and final disposition belongs to the c gate and human anchor a. This is a re-review of the v0.1.1 corrected delta against the finding of SELC_WDC_DELTA_REVIEW_RECORD_v0_1.

2. Verification summary

The finding from SELC_WDC_DELTA_REVIEW_RECORD_v0_1 was checked against the v0.1.1 text.

- SELC-WDC-DELTA-REV-F1 (must-fix, cross-document) — closed. §11.3 declares §9/§11 the canonical WDC annotation + severity vocabulary and provides a crosswalk mapping every divergent older 03/patch-index string to the canonical one, including the two 03 fixture-handoff annotations that were previously absent from §11, each with disambiguation guidance. The downstream harmonization of the 03 delta, the patch index, and the future 08 fixtures is tracked as open issue SELC-WDC-0Q-005 (to be done before package assembly) and reinforced in §18, §19, and the §21 checklist.

Regression: the numbered header sequence is intact, the change is additive only (crosswalk + harmonization tracking; the correction note confirms no rule result, predicate, gate behavior, red line, pass state, or boundary changed), the canonical vocabulary itself is unchanged, PASS_WITH_LIMITS appears only in prohibition statements, and provenance bindings are intact. No residuals were found.

3. Verdict rationale

The v0.1.1 revision closes the finding with a correct, additive fix and introduces no regressions; the crosswalk is complete (all seven divergent strings, including the two previously missing, with disambiguation) and the downstream harmonization is explicitly tracked. No red line is present. The result therefore moves from PASS_WITH_LIMITS to PASS.

The 04 delta is accepted at review level and now owns the cross-document reconciliation rather than leaving a silent mismatch. One tracked downstream item remains: SELC-WDC-0Q-005 requires the accepted 03 delta (likely a v0.1.2 bump), the patch index §7.1/§10, and the future 08 fixtures to be harmonized to the canonical 04 vocabulary before the v0.1.2 package is assembled. The reviewer will verify that alignment when the 08 fixtures and the package-manifest review are reached.

4. Closing

Re-review verdict: PASS (up from PASS_WITH_LIMITS).

SELC-WDC-DELTA-REV-F1 closed: §11.3 canonical vocabulary + complete crosswalk; harmonization tracked as SELC-WDC-0Q-005.

No regressions. No residuals.

Tracked downstream: harmonize 03 / patch index / 08 to the canonical 04 vocabulary before package assembly.

No red line. No integration performed. Decision remains with c and a.
