WDC-ASM-002 Gate Closure Review Record v0.1

Independent b-layer documentary-consistency review of the WDC-ASM-002 gate closure record

Status: Review record / package-control documentary check (advisory)

Date: 2026-06-27T17:41:26Z

Record ID: WDC_ASM_002_GATE_CLOSURE_REVIEW_RECORD_v0_1

Short name: WDC-ASM-002-CLOSURE-REVIEW v0.1

Reviewer role: semantic / package-control reviewer (CGAM b-layer worker; not c, not a)

Reviewer authority: advisory only (QR-AX-02); this record checks a document — it does NOT grant, ratify, or withhold gate-closure authority, which belongs to c/a

Result: PASS (documentary consistency)

Reviewed artifact: WDC_ASM_002_GATE_CLOSURE_RECORD_v0_1.md

Reviewed artifact SHA-256: 6c4c92516162043a562983fe128be13a0cf965a3d17659d363d1cb0142d96107

> Important framing: the reviewed artifact is a c/a-layer closure decision. This review checks whether that closure record is internally consistent, correctly bounded, and accurately grounded in the converged WDC-ASM-002 candidate. The PASS below is a verdict on the document, not an authorization or ratification of the closure itself.

0. Reviewer boundary statement

Produced by a bounded CGAM review worker acting as a semantic / package-control reviewer. It did not author the reviewed artifact (QR-AX-01); it does not approve, integrate, close gates, assemble, or release (AX-03, AX-04, QR-AX-02).

The reviewed artifact is a gate-closure record, which is a c/a package-control decision. The reviewer's role here is narrow and specific: to check that the closure record is well-formed — internally consistent, correctly scoped, accurately grounded in the converged candidate, and properly bounded by nonclaims. The reviewer neither holds nor confers closure authority; the c/a closure decision recorded in the artifact stands or falls on its own authority, independent of this check.

1. Machine-readable review record

checks:
  authority_boundary:
    result: "PASS";
    note: >
      §5.1 sets authority_model: <x27;c/a package-control closure<x27;; the closure is taken <x27;on the
basis of
  the PASS
  re-review<x27; (the b-layer review is used as evidence/basis, not as the closing authority). The
  record does not
  elevate the reviewer<x27;s advisory PASS into a closure act. Correct.
  provenance:
    result: "PASS";
    note: >
      §3/§6 cite the converged candidate: gate-execution record d40f97cf, harmonized 03 5a7e6af6,
      harmonized index
      af01b1b4, and the re-review result PASS. The supersession chain is recorded.
  scope:
    result: "PASS";
    note: "closes only WDC-ASM-002; gates_not_closed_by_this_record lists 001/003/004/005/006; §1.2
    out-of-scope consistent";
  internal_consistency:
    result: "PASS";
    note: >
      The apparent tension at §5.2 line 328 (<x27;the manifest SHA map has already been rewritten<x27;)
is
  resolved by its
  context: it sits inside the <x27;It does not mean:<x27; negation list, so the record explicitly
  disclaims that the
  manifest is already updated – consistent with §6 manifest_sha_map_update_required: true and §7.
  nonclaim:
    result: "PASS";
    note: >
      §6 nonclaims sets package_assembled, public_release_authorized, conformance_certified,
      deployment_authorized,
      witness_independence_certified, implementation_ready, memory_write_authorized, and
      runtime_self_evolution_authorized
      all false. §9 nonclaim boundary present.
  bridge_set:
    result: "PASS";
    note: "§2 explicit c=a+b + information theory + cybernetics + physiology + earth";
  line_count_accuracy:
    result: "PASS";
    note: "§3.2/§6 record the index as 855 lines (matches the actual file; the gate record/patch
    notes<x27; 856 is the descriptive nit, corrected here)";
  rollback_policy:
    result: "PASS";
    note: "§6 rollback_policy and §11 give sound reopen conditions, including reopen if a release
    surface treats this closure as conformance/deployment/witness-independence certification";
  manifest_propagation:
    result: "PASS";
    note: "§7 correctly frames the SHA-map update as a downstream obligation under WDC-ASM-001, not
    performed by this record";

  transparency_note:
    cited_review_record_hash: "254680ae... (closure record §3.1/§6) is the author<x27;s sealed copy of
the
  reviewer<x27;s WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1_1; not independently verifiable
  against the reviewer<x27;s unsealed output (record_sha256 placeholder), but correctly attributed
  (filename, ~178 lines, PASS)";

findings: [] # none

red_line_check:
  self_certification_path: false
  overclaim_present: false
  relaxes_any_gate: false
  reviewer_assumes_closure_authority: false
  result: "no red line; the closure record keeps closure authority with c/a and bounds its scope and
  claims correctly";

recommended_next_state:
  reviewed_document: "well-formed as a c/a gate-closure record";
  action: >
    perform the downstream manifest SHA-map update under WDC-ASM-001 (replace provisional 03 with
    5a7e6af6 and index
    with af01b1b4, record WDC-ASM-002 CLOSED, keep other gates pending, state
    not-release/not-DOI/not-conformance);

```

```

    then proceed to WDC-ASM-003 (07 WRCG/CST projection verification)
    decision_owner: &quot;c-gate + human anchor (a)&quot;          # advisory only

witness_note: &gt;
    Package-control documentary-check artifact bound to the closure record's sha256. Evidence that the
    closure record
    was checked for consistency and bounds; not an authorization or ratification of the closure
    decision.

rollback_note: &gt;
    Supersede by an append-first corrected review record if a later revision of the closure record
    changes the analysis.
    Do not delete this record; preserve witness history.

record_sha256: &quot;&lt;seal at integration time&gt;&quot;

```

2. Review scope

The reviewer read the full closure record (608 lines, all 12 sections) and checked it as a documentary artifact against: the converged WDC-ASM-002 candidate (gate record d40f97cf, harmonized 03 5a7e6af6, harmonized index af01b1b4, and the re-review PASS), the accepted manifest (cde9178a), and the b/c/a authority boundary. The review verifies internal consistency, scope, provenance accuracy, nonclaim discipline, the bridge set, and the manifest-propagation framing.

It does not make, ratify, or override the closure decision, which is a c/a act.

Disposition vocabulary used is the pack result set: PASS | PASS_WITH_LIMITS | FAIL | BLOCKED | HELD | FROZEN | QUARANTINED | REVOKED | ROLLED_BACK | ESCALATED | INCONCLUSIVE | NOT_APPLICABLE | RED_LINE_FAIL.

3. Conformance checks passed (verified against the document)

The closure record is well-formed on every axis checked.

- Authority boundary correct. §5.1 attributes the closure to c/a package-control closure and takes it on the basis of the re-review PASS; the reviewer's advisory verdict is used as evidence, not as the closing authority. The record does not elevate the b-layer review into a closure act.
- Provenance accurate. §3/§6 cite the converged candidate (gate record d40f97cf, 03 5a7e6af6, index af01b1b4, re-review PASS) and record the supersession chain.
- Scope limited. Only WDC-ASM-002 is closed; WDC-ASM-001/003/004/005/006 are listed as not closed by this record.
- Internally consistent. The §5.2 line about the manifest SHA map sits in the "It does not mean:" negation list, so it disclaims that the manifest is already updated — consistent with §6 manifest_sha_map_update_required: true and §7.
- Nonclaim comprehensive. §6 sets all release/conformance/deployment/independence/implementation/memory-write/runtime-self-evolution claims false, and §9 states the nonclaim boundary.
- Bridge set, line counts, rollback. §2 carries the full bridge set; §3.2/§6 record the index as 855 lines (matching the file); §6/§11 give sound reopen conditions.

There are no findings. One transparency note: the cited hash of the reviewer's own re-review record (254680ae) is the author's sealed copy and is not independently verifiable against the reviewer's unsealed output, though it is correctly attributed.

4. Findings

None. The closure record is internally consistent, correctly scoped, accurately grounded, properly bounded, and keeps closure authority with c/a.

5. Verdict rationale

There is no red line. The closure record correctly attributes the WDC-ASM-002 closure to c/a, uses the re-review PASS as the basis rather than the authority, limits its scope to the single gate, grounds itself accurately in the converged candidate, disclaims (in §5.2 and §6) every overreach a reader might infer, carries the bridge set, and records the manifest SHA-map update as a downstream obligation rather than a completed fact. As a documentary artifact it is sound, so the result is PASS.

The meaning of this PASS must stay precise: it is a verdict on the document, confirming that the closure record is well-formed and honestly bounded. It is not an authorization, ratification, or override of the closure decision, which is a c/a act and stands on its own authority. The reviewer remains a b-layer checker throughout. The next work is the downstream manifest SHA-map update under WDC-ASM-001, followed by WDC-ASM-003; none of that is performed here, and all of it remains with c and a.

6. Register handoff

No findings to register. Informational handoff: the downstream obligation recorded in §7 (manifest SHA-map propagation of 03=5a7e6af6 and index=af01b1b4, recording WDC-ASM-002 CLOSED) is WDC-ASM-001 work and should be tracked there. Decision owner: c-gate + human anchor.

7. Closing

A review is itself a b-layer instrument. Here it is pointed at a c/a decision, so its reach is deliberately short: it can confirm that the record of a closure is consistent, bounded, and honestly grounded, but it cannot — and does not — confer the closure itself. The closure record understands this and writes it down plainly: the gate closes on c/a authority, on the basis of a b-layer PASS, and it claims nothing more than the narrow thing it did. That is exactly the right shape for a closure record, which is why this check returns PASS and stops there.

Verdict: PASS (documentary consistency).

The closure record is internally consistent, correctly scoped, accurately grounded, and keeps closure authority with c/a.

No findings. The PASS is a verdict on the document, not a ratification of the closure.

Next: manifest SHA-map update under WDC-ASM-001; then WDC-ASM-003.

No red line. No gate closure, assembly, or release performed by this review. Decision remains with c and a.
