WDC-ASM-002 Textual Harmonization Review Record v0.1.1 (re-review / convergence)

Independent control-layer re-review record for the corrected WDC-ASM-002 textual-harmonization gate candidate

Status: Review record / package-control gate-review artifact (advisory) — append-first supersession of WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1

Date: 2026-06-27T13:11:32Z

Record ID: WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1_1

Short name: WDC-ASM-002-HARMONIZATION-REVIEW v0.1.1

Reviewer role: semantic / package-control reviewer (CGAM b-layer worker; not c, not a)

Reviewer authority: advisory only (QR-AX-02); this record is evidence, not approval, not gate closure, not assembly, not release

Result: PASS

Primary reviewed artifact: WDC_ASM_002_TEXTUAL_HARMONIZATION_RECORD_v0_1_1.md

Primary reviewed artifact SHA-256: d40f97cfd2572c97ae48511653960fc09e97992aef696fb4ab8d78bbb9f11658

Co-reviewed artifacts: SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_3.md (af01b1b4...), 03..._WDC_Delta_v0_1_2_v0_1_2.md (5a7e6af6..., unchanged)

Supersedes: WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1 (result PASS_WITH_LIMITS, reviewed sha256 d90b86e04b5880fe103da129a13e1c2637ec76f2cccb27fd8cd652d76943a493)

> Scope reminder: this records convergence of the WDC-ASM-002 gate-execution candidate. The harmonization content and the hash bindings are now both verified. It does NOT itself close the gate, assemble the package, or release anything — gate closure belongs to c/a.

0. Reviewer boundary statement

Produced by a bounded CGAM review worker acting as a semantic / package-control reviewer. It did not author the reviewed artifacts (QR-AX-01); it does not approve, integrate, close gates, assemble, or release (AX-03, AX-04, QR-AX-02); the verdict is advisory and final disposition belongs to the c gate and human anchor a. This re-review checks the v0.1.1 corrected candidate against the finding of WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1, verifying against the actual file bytes/text, not the record's claims.

1. Machine-readable re-review record

  status: &quot;CLOSED&quot;;
  verified_by: &gt;;
    Part (a) – index hash binding: the gate record ($3/$9) and patch notes now cite the patch index
    as
    af01b1b4..., which matches the actual file (verified by direct hashing). The gate record's own
    hash
    (d40f97cf) matches the patch-notes claim. Part (b) – internal 03 citation: the new index cites
    the
    harmonized 03 as 5a7e6af6 at lines 19, 93, and 814, with zero occurrences of the stale f10245fe.
    The superseded intermediate index v0_1_2 (4b350ab1) is referenced exactly once, on line 9,
    correctly framed
    as the superseded prior revision. §17.3 documents the correction and states no gate is closed by
    it.

harmonization_reverification:                                # re-checked against the NEW index file text
  old_annotation_scan:
    hits_in_index_v0_1_3: 0
    result: &quot;CLEAN – no historical strings in the new index&quot;;
  canonical_vocabulary_scan:
    all_nine_present: true
    result: &quot;PASS&quot;;
  pass_with_limits_as_output:
    result: &quot;PASS – appears only in review-driver/review-history lines and a prohibition statement;
    never as a checker or fixture output&quot;;
  nonclaim:
    result: &quot;PASS – no new release/conformance/independence/deployment claim; boundaries intact; §17.3
    explicitly states no gate is closed by the correction&quot;;
  note_03_unchanged: &quot;03 remains 5a7e6af6; not re-scanned beyond confirming the hash (verified clean
  in the prior review)&quot;;

provenance_chain:
  index:
    - &quot;v0_1_1 ea2a4855 – pre-harmonization baseline&quot;;
    - &quot;v0_1_2 4b350ab1 – first harmonized (line-19 f10245fe error), superseded&quot;;
    - &quot;v0_1_3 af01b1b4 – corrected harmonized, supersedes v0_1_2, cites 03 as 5a7e6af6&quot;;
  gate_record:
    - &quot;v0_1 d90b86e0 – cited index as fb0fff89 (mismatch), superseded&quot;;
    - &quot;v0_1_1 d40f97cf – cites index af01b1b4 (match) and 03 5a7e6af6&quot;;
  result: &quot;coherent and hash-consistent across all three artifacts&quot;;

cosmetic_nits:                                              # non-blocking
- &quot;the gate record ($3/$9) and patch notes describe the index as 856 lines; actual wc -l is 855
  (trailing-newline off-by-one). The hash binding (af01b1b4) is exact, so this is descriptive
  metadata only and does not affect the verdict; optional touch-up to 855.&quot;;

red_line_check:
  self_certification_path: false
  overclaim_present: false
  relaxes_any_gate: false
  closes_gate_or_assembles: false
  result: &quot;no red line; the candidate is honestly bounded and does not self-close, self-assemble, or
  self-release&quot;;

gate_status_after_review:
  WDC-ASM-002: &quot;candidate SOUND – harmonization content verified correct and hash bindings verified
  consistent; ready for c/a to close&quot;;
  final_harmonized_hashes:
    &quot;03&quot;: &quot;5a7e6af6...&quot;;
    index: &quot;af01b1b4...&quot;;
  downstream:
    - &quot;on c/a closure, propagate 03=5a7e6af6 and index=af01b1b4 into the manifest SHA map (manifest

```

```

    §6.1); this also resolves the provisional markings and advances WDC-ASM-001&quot;
    other_gates_open: &quot;WDC-ASM-001/003/004/005/006 remain open&quot;

recommended_next_state:
  reviewed_candidate: &quot;accepted at review level as PASS; gate-execution candidate is sound&quot;
  action: &gt;
    c/a may close WDC-ASM-002 and update the manifest SHA map to the final harmonized hashes; then
    proceed to
      WDC-ASM-003 (07 WRCG/CST projection verification), then WDC-ASM-004 (08 fixture gate), WDC-ASM-005
      (boundary/nonclaim scan), and WDC-ASM-001 (assembly)
    decision_owner: &quot;c-gate + human anchor (a)&quot;          # advisory only

witness_note: &gt;
  Package-control gate-review re-review artifact bound to the corrected gate record's sha256 and
  recording the
  verified final hashes. Evidence of a performed re-review, not a gate-closure, assembly, or release
  event.

rollback_note: &gt;
  Supersede by a further append-first record if a later revision changes the verdict. Do not delete
  prior records;
  preserve the witness chain (v0.1 record -&gt; this record).

record_sha256: &quot;&lt;seal at integration time&gt;&quot;

```

2. Verification summary

The finding from WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1 was checked against the corrected v0.1.1 artifacts and the new index file text.

- WDC-ASM-002-REV-F1 (must-fix) — closed. Part (a): the gate record and patch notes now cite the patch index as af01b1b4, matching the actual file (verified by direct hashing); the gate record's own hash d40f97cf matches its patch-notes citation. Part (b): the new index cites the harmonized 03 as 5a7e6af6 at lines 19/93/814 with zero f10245fe; the superseded intermediate index v0_1_2 (4b350ab1) is referenced once, on line 9, correctly framed as the prior revision.

Re-verification of the harmonization in the new index: the historical strings return zero hits, all nine canonical strings are present, PASS_WITH_LIMITS appears only in review-history and prohibition contexts (never as a checker/fixture output), and no new release/conformance/independence/deployment claim is introduced. §17.3 documents the correction and states no gate is closed by it. 03 is unchanged (5a7e6af6, verified clean in the prior review).

One non-blocking cosmetic nit: the gate record and patch notes describe the index as 856 lines while the actual is 855 (trailing-newline off-by-one). The hash binding is exact, so this is descriptive metadata only.

3. Verdict rationale

The v0.1.1 correction closes the finding with a correct, provenance-only fix: the hash bindings now agree across the gate record, the patch notes, and the index, and the index's internal 03 citation is consistent at the actual file hash. The harmonization content — verified correct in the prior review and re-confirmed in the new index — is unchanged, and no regression or new claim was introduced. No red line is present. The result therefore moves from PASS_WITH_LIMITS to PASS.

The WDC-ASM-002 gate-execution candidate is now sound on both axes the gate cares about: the documents speak the canonical 04 vocabulary, and the hashes that bind them name the files that actually exist. Per the candidate's own §17.3, this review does not itself close the gate; closure belongs to c/a. On closure, the final harmonized hashes (03=5a7e6af6, index=af01b1b4) should be propagated into the manifest SHA map per manifest §6.1, which also resolves the provisional markings and advances WDC-ASM-001. The remaining gates (WDC-ASM-001/003/004/005/006) are unaffected and proceed separately.

4. Closing

Re-review verdict: PASS (up from PASS_WITH_LIMITS).

WDC-ASM-002-REV-F1 closed: index hash binding now af01b1b4 (matches file); internal 03 citation 5a7e6af6 everywhere (no f10245fe).
Harmonization re-verified in the new index: old strings 0, canonical vocabulary present, no PASS_WITH_LIMITS as output, no new claims.
Provenance chain coherent (index v0_1_1 -> v0_1_2 superseded -> v0_1_3 final; gate record v0_1 -> v0_1_1).
WDC-ASM-002 candidate is sound; ready for c/a closure; final hashes 03=5a7e6af6, index=af01b1b4 propagate into the manifest SHA map.
No red line. No gate closure, assembly, or release performed. Decision remains with c and a.
