WDC-ASM-003 Gate Closure Review Record v0.1

Independent b-layer documentary-consistency review of the gate closure record WDC-ASM-003

Status: Review record / package-control documentary check (advisory)

Date: 2026-06-27T18:36:23Z

Record ID: WDC_ASM_003_GATE_CLOSURE_REVIEW_RECORD_v0_1

Short name: WDC-ASM-003-CLOSURE-REVIEW v0.1

Reviewer role: semantic / package-control reviewer (CGAM b-layer worker; not c, not a)

Reviewer authority: advisory only (QR-AX-02); this record checks a document — it does NOT grant, ratify, or withhold gate-closure authority, which belongs to c/a

Result: PASS (documentary consistency)

Reviewed artifact: WDC_ASM_003_GATE_CLOSURE_RECORD_v0_1.md

Reviewed artifact SHA-256: 1a91abea28f6ab41b0df2424c3e800e9a9d6aee2e37ed4acf29e0fffd5516273

> Important framing: the reviewed artifact is a c/a closure decision. This review checks whether that closure record is internally consistent, correctly bounded, and accurately grounded in the converged WDC-ASM-003 verification candidate. The PASS is a verdict on the document, not an authorization or ratification of the closure itself.

0. Reviewer boundary statement

Produced by a bounded CGAM review worker acting as a semantic / package-control reviewer. It did not author the reviewed artifact (QR-AX-01); it does not approve, integrate, close gates, assemble, or release (AX-03, AX-04, QR-AX-02). The reviewed artifact is a gate-closure record (a c/a decision); the reviewer checks only that it is well-formed and honestly bounded. The reviewer neither holds nor confers closure authority.

1. Machine-readable review record

  self_certification_path: false
  overclaim_present: false
  relaxes_any_gate: false
  reviewer_assumes_closure_authority: false
  result: &quot;no red line; the closure record keeps closure authority with c/a and bounds its scope and
    claims correctly&quot;;

recommended_next_state:
  reviewed_document: &quot;well-formed as a c/a gate-closure record&quot;;
  action: &gt;;
  perform the downstream manifest update under WDC-ASM-001 (record WDC-ASM-003 CLOSED,
    projection_verified true,
    keep other gates pending); then proceed to WDC-ASM-004 (08 fixture gate)
  decision_owner: &quot;c-gate + human anchor (a)&quot;; # advisory only

witness_note: &gt;;
  Package-control documentary-check artifact bound to the closure record&#x27;s sha256. Evidence that the
  closure record
  was checked for consistency and bounds; not an authorization or ratification of the closure
  decision.

rollback_note: &gt;;
  Supersede by an append-first corrected review record if a later revision of the closure record
  changes the analysis.
  Do not delete this record; preserve witness history.

record_sha256: &quot;&lt;seal at integration time&gt;&quot;;

```

2. Review scope

The reviewer read the full closure record (774 lines, all 14 sections) and checked it as a documentary artifact against the converged WDC-ASM-003 verification candidate (39a68604), the verification review (PASS), the source 07 (804a8e34), the target 03 (5a7e6af6), and the current manifest (aa5fb978). It verifies internal consistency, scope, provenance accuracy, the authority boundary, nonclaim discipline, the bridge set, and the manifest-propagation framing. It does not make, ratify, or override the closure decision.

Disposition vocabulary used is the pack result set: PASS | PASS_WITH_LIMITS | FAIL | BLOCKED | HELD | FROZEN | QUARANTINED | REVOKED | ROLLED_BACK | ESCALATED | INCONCLUSIVE | NOT_APPLICABLE | RED_LINE_FAIL.

3. Conformance checks passed (verified against the document)

The closure record is well-formed on every axis, parallel to the verified WDC-ASM-002 closure record.

- Authority boundary correct. §6 attributes the closure to c/a, marks the review as b-layer evidence only, and sets `self_closing_review`: false; the closure is taken on the basis of the verification review PASS.
- Provenance accurate. §3/§6 cite the verification candidate (39a68604), the verification review (95321fcb, PASS), 07 (804a8e34), and 03 (5a7e6af6).
- Scope limited. Only WDC-ASM-003 is closed; WDC-ASM-001/004/005/006 remain open, and §1 explicitly disclaims fixture execution and other-gate closure.
- Internally consistent. §6 `manifest_effect` records the manifest update as a downstream WDC-ASM-001 obligation (not as already done), and `verified_properties` match the verification review.
- Nonclaim comprehensive. §6 sets all release/DOI/conformance/deployment/independence/implementation/fixture-execution/memory-write/runtime-self-evolution claims false.
- Bridge set and rollback. §2 carries the full bridge set; §6/§11 give sound reopen conditions.

There are no findings. One transparency note: the cited hash of the reviewer's own verification review (95321fcb) is the author's sealed copy, correctly attributed but not independently verifiable.

4. Findings

None. The closure record is internally consistent, correctly scoped, accurately grounded, properly bounded, and keeps closure authority with c/a.

5. Verdict rationale

There is no red line. The closure record correctly attributes the WDC-ASM-003 closure to c/a, uses the verification review PASS as the basis rather than the authority, limits its scope to the single gate, grounds itself in the verification candidate and the actual 07/03 sources, records the manifest update as a downstream obligation, carries the bridge set, and sets every overreach claim false. As a documentary artifact it is sound, so the result is PASS.

The meaning of this PASS stays precise: it is a verdict on the document, not an authorization, ratification, or override of the closure, which is a c/a act and stands on its own authority. The next work is the downstream manifest update under WDC-ASM-001 (WDC-ASM-003 CLOSED, `projection_verified` true), followed by WDC-ASM-004 (08 fixture gate); none of that is performed here, and all of it remains with c and a.

6. Register handoff

No findings to register. Informational: the downstream manifest update recorded in §3.4/§7 (WDC-ASM-003 CLOSED, projection_verified true) is WDC-ASM-001 work and should be tracked there. Decision owner: c-gate + human anchor.

7. Closing

A review is itself a b-layer instrument. Pointed at a c/a decision, it can confirm that the record of a closure is consistent, bounded, and honestly grounded, but it cannot confer the closure. This record, like its WDC-ASM-002 sibling, writes that boundary down plainly: the gate closes on c/a authority, on the basis of a b-layer PASS, and claims nothing more than the projection it verified. That is the right shape, so this check returns PASS and stops there.

Verdict: PASS (documentary consistency).

The closure record is internally consistent, correctly scoped, accurately grounded, and keeps closure authority with c/a.

No findings. The PASS is a verdict on the document, not a ratification of the closure.

Next: manifest update under WDC-ASM-001 (WDC-ASM-003 CLOSED, projection_verified true); then WDC-ASM-004.

No red line. No gate closure, assembly, or release performed by this review. Decision remains with c and a.
