WDC-ASM-003 WRCG/CST Projection Verification Review Record v0.1

Independent control-layer review of the WDC-ASM-003 projection verification candidate

Status: Review record / package-control gate-review artifact (advisory)

Date: 2026-06-27T18:20:20Z

Record ID: WDC_ASM_003_WRCG_CST_PROJECTION_VERIFICATION_REVIEW_RECORD_v0_1

Short name: WDC-ASM-003-PROJECTION-REVIEW v0.1

Reviewer role: semantic / package-control reviewer (CGAM b-layer worker; not c, not a)

Reviewer authority: advisory only (QR-AX-02); this record is evidence, not approval, not gate closure, not assembly, not release

Result: PASS

Reviewed artifact: WDC_ASM_003_WRCG_CST_PROJECTION_VERIFICATION_RECORD_v0_1.md

Reviewed artifact SHA-256: 39a686045bf04a76e9c2941f68a7b390bfb265b936db0d80b5601d4ae927c8f3

> Scope: this reviews the WDC-ASM-003 / SEARG-WDC-0Q-005 projection verification candidate. It does NOT close the gate, assemble, or release; gate closure is a separate c/a step.

> Status caveat (inherited from pack): private reference review record. Not a public release. Not a conformance certificate.

0. Reviewer boundary statement

Produced by a bounded CGAM review worker acting as a semantic / package-control reviewer. It did not author the reviewed artifact (QR-AX-01); it does not approve, integrate, close gates, assemble, or release (AX-03, AX-04, QR-AX-02).

Per the reviewer's standing discipline, the projection was verified against the actual text of 07 (804a8e34) §11.2/§13.2 and the actual JSON Schema enum \$defs of the harmonized 03 (5a7e6af6), not against the verification record's claims.

  lossless_through_annotation:
    result: &quot;PASS&quot;;
    note: &gt;
      compressed mappings (pass_with_gates/warning -&gt; pass; hold/unverified/unknown -&gt; not_run)
      preserve the lost
      bits via canonical wdc.* annotation + checker route + sidecar/evidence refs. The record honestly
      states it is
      &#x27;not naively lossless at the packet-field level&#x27; but lossless at package-control level
through
      these carriers.
  fail_closed:
    result: &quot;PASS&quot;;
    note: &quot;wdc.wrcg_missing_or_failed for missing/failed/self-declared WRCG; $7.4 states a material
    CST projecting only to not_run must not be treated as clean pass; unprojectable -&gt;
    fail/hold/human_gate, never clean pass&quot;;

boundary_check:
  self_closes_gate: false
  note: &gt;
    $1 explicitly states the record does not close WDC-ASM-003 and does not replace c/a decision
    authority. $13
    frames it as a &#x27;verification candidate: SOUND&#x27; that recommends independent review, with
closure as
    a separate
    c/a step. $10 notes the manifest keeps WDC-ASM-003 pending and this record does not change that.
    result: &quot;PASS – correctly bounded&quot;;

conformance_checks_passed:
  bridge_set: &quot;PASS – explicit c=a+b + information theory + cybernetics + physiology + earth&quot;;
  nonclaim: &quot;PASS – $1 disclaims conformance/deployment/independence/assembly/release/memory-

recommended_next_state:
  reviewed_candidate: &quot;accepted at review level as PASS&quot;
  action: &gt;
    c/a may create a separate WDC-ASM-003 closure record (as for WDC-ASM-002) and update the manifest
    to
    WDC-ASM-003 CLOSED / projection_verified true; then proceed to WDC-ASM-004 (08 fixture gate),
    WDC-ASM-005
    (boundary/nonclaim scan), and WDC-ASM-001 (final assembly)
  decision_owner: &quot;c-gate + human anchor (a)&quot;          # advisory only

witness_note: &gt;
  Package-control gate-review artifact bound to the verification record&#x27;s sha256, recording the
  ground-truth checks
  against 07 and 03. Evidence of a performed review, not a gate-closure, assembly, or release event.

rollback_note: &gt;
  Supersede by an append-first corrected review record if a later revision changes the analysis. Do
  not delete this
  record; preserve witness history.

record_sha256: &quot;&lt;seal at integration time&gt;&quot;

```

2. Review scope

The reviewer read the full verification record (597 lines, all 14 sections) and independently re-derived the projection from the actual sources: 07 (804a8e34) §11.2 (WRCG result vocabulary and packet projection) and §13.2 (CST result projection), and the harmonized 03 (5a7e6af6) JSON Schema \$defs enum arrays for challenge_survivability_test.result and witness_resource_change_gate.result. The review checks totality, lossless-through-annotation, fail-closed behavior, and the closure boundary.

Disposition vocabulary used is the pack result set: PASS | PASS_WITH_LIMITS | FAIL | BLOCKED | HELD | FROZEN | QUARANTINED | REVOKED | ROLLED_BACK | ESCALATED | INCONCLUSIVE | NOT_APPLICABLE | RED_LINE_FAIL.

3. Conformance checks passed (verified against source text, not claims)

The projection is verified sound on the ground.

- Target enums confirmed from 03. The harmonized 03 JSON Schema \$defs define challenge_survivability_test.result as [pass, fail, not_run, not_applicable] and witness_resource_change_gate.result as [pass, fail, human_gate, not_run], matching the record's §5.1/§5.2.
- Crosswalk matches 07. The record's §6.2 (WRCG) and §7.2 (CST) tables reproduce 07's actual §11.2/§13.2 projection tables exactly, including the canonical annotations and checker routes.
- Totality. The source enums (07's richer values plus not_run) are a superset of 07's actual values; every value maps to a valid 03 target with no unprojectable values.

- Lossless-through-annotation. Compressed mappings preserve the lost bits via canonical wdc.* annotation, checker route, and sidecar/evidence refs. The record is precise that this is lossless at package-control level, not naive packet-field losslessness.
- Fail-closed. Missing/failed/self-declared WRCG routes to wdc.wrcg_missing_or_failed; a material CST projecting only to not_run must not be treated as a clean pass; unprojectable states fail closed or route to hold/human-gate.
- Boundary, bridge set, nonclaim. §1 disclaims self-closure and preserves c/a authority; §13 frames the record as a verification candidate with closure as a separate c/a step; the bridge set and nonclaim discipline are present.

There are no findings.

4. Findings

None. The projection verification is total, lossless-through-annotation, and fail-closed, verified against the actual 07 crosswalk and 03 enum definitions, and the record correctly leaves closure to c/a.

5. Verdict rationale

There is no red line. The verification record correctly establishes that every 07 WRCG and CST gate-record value projects into the accepted 03 packet enums with no unprojectable values, that the information compressed in the projection is preserved through canonical annotations, checker routes, and sidecar/evidence references, and that unprojectable or material-but-unverified states fail closed rather than becoming a clean pass. These properties were confirmed against the actual 07 §11.2/§13.2 tables and the actual 03 enum \$defs, not merely against the record's claims. The record is honestly bounded — it calls itself a verification candidate, recommends review, and reserves closure for c/a. The result is PASS.

The WDC-ASM-003 verification candidate is sound. Per the record's own §13, c/a may now create a separate WDC-ASM-003 closure record (mirroring WDC-ASM-002) and update the manifest to WDC-ASM-003: CLOSED / projection_verified: true, satisfying SEARG-WDC-00-005. The remaining gates — WDC-ASM-004 (08 fixture gate), WDC-ASM-005 (boundary/nonclaim scan), and WDC-ASM-001 (final assembly) — stay open. This review performs no closure, assembly, or release; all such decisions remain with c and a.

6. Register handoff

No findings to register. Informational: on c/a closure of WDC-ASM-003, the manifest update (WDC-ASM-003: CLOSED, projection_verified: true) is WDC-ASM-001-adjacent package-control work and should be recorded there. Decision owner: c-gate + human anchor.

7. Closing

A review is itself a b-layer instrument. Here it confirms a compression is safe: a richer set of gate-record outcomes is squeezed into a smaller packet vocabulary, and the question is only whether the squeeze loses anything that matters. It does not — every outcome lands on a legal value, the bits that do not fit are carried alongside in annotations and routes, and the states that would be dangerous to wave through are made to stop instead. The record proves this against the real schemas and then, correctly, hands the decision back to c and a. That is the right shape, so this check returns PASS.

```
Verdict: PASS.
Projection verified against actual 07 (§11.2/§13.2) and 03 (enum $defs): total,
  lossless-through-annotation, fail-closed.
03 targets confirmed: CST {pass,fail,not_run,not_applicable}; WRCG {pass,fail,human_gate,not_run}.
Record correctly does not self-close; WDC-ASM-003 ready for a separate c/a closure record.
```

No red line. No gate closure, assembly, or release performed. Decision remains with c and a.
