# WDC-ASM-004 Fixture Gate Verification Review Record v0.1

## Independent control-layer review of the WDC-ASM-004 fixture gate verification candidate

Status: Review record / package-control gate-review artifact (advisory)

Date: 2026-06-27T19:11:59Z

Record ID: WDC\_ASM\_004\_FIXTURE\_GATE\_VERIFICATION\_REVIEW\_RECORD\_v0\_1

Short name: WDC-ASM-004-FIXTURE-GATE-REVIEW v0.1

Reviewer role: semantic / package-control reviewer (CGAM b-layer worker; not c, not a)

Reviewer authority: advisory only (QR-AX-02); this record is evidence, not approval, not gate closure, not assembly, not release

Result: PASS

Reviewed artifact: WDC\_ASM\_004\_FIXTURE\_GATE\_VERIFICATION\_RECORD\_v0\_1.md

Reviewed artifact SHA-256: ff2c0431b98245f53603dcdef74be8bd03f46d9e6276710d5826087c23e521ed

> Scope: this reviews the WDC-ASM-004 (08 §12.3 fixture gate) verification candidate. It does NOT close the gate, assemble, or release; gate closure is a separate c/a step.

> Status caveat (inherited from pack): private reference review record. Not a public release. Not a conformance certificate.

## 0. Reviewer boundary statement

Produced by a bounded CGAM review worker acting as a semantic / package-control reviewer. It did not author the reviewed artifact (QR-AX-01); it does not approve, integrate, close gates, assemble, or release (AX-03, AX-04, QR-AX-02).

Per the reviewer's standing discipline, the fixture gate was verified against the actual text of the 08 fixture pack (4aa5b85e) — its fixture expected outputs, historical-alias contexts, PASS\_WITH\_LIMITS contexts, §12.3 package-assembly requirement, and §16.1 runner rejection conditions — not against the verification record's claims.

  witness_note: >

```

Package-control gate-review artifact bound to the verification record's sha256, recording the ground-truth checks against 08. Evidence of a performed review, not a gate-closure, assembly, or release event.

rollback\_note: >  
Supersedes by an append-first corrected review record if a later revision changes the analysis. Do not delete this record; preserve witness history.

record\_sha256: <seal at integration time>

## 2. Review scope

The reviewer read the full verification record (650 lines, all 16 sections) and independently checked its claims against the actual 08 fixture pack (4aa5b85e): the canonical vocabulary in fixture expected outputs, the contexts in which historical aliases appear, the contexts in which PASS\_WITH\_LIMITS appears, the §12.3 package-assembly requirement, the §16.1 runner rejection conditions, and the WDC-FIX-008/010/011 inventory. The review checks canonical-only outputs, alias policy, PASS\_WITH\_LIMITS discipline, gate existence, inventory accuracy, scope, and the closure boundary.

Disposition vocabulary used is the pack result set: PASS | PASS\_WITH\_LIMITS | FAIL | BLOCKED | HELD | FROZEN | QUARANTINED | REVOKED | ROLLED\_BACK | ESCALATED | INCONCLUSIVE | NOT\_APPLICABLE | RED\_LINE\_FAIL.

## 3. Conformance checks passed (verified against 08 text, not claims)

The fixture gate verification is sound on the ground.

- Canonical-only outputs. All nine canonical 04 strings appear in 08 fixture expected outputs.
- Alias policy. Historical alias strings appear in 08 only as a prohibition list, legacy\_input\_annotation fields, triggers/source-notes, explicit prohibitions, and the crosswalk table — never as an active expected output.
- PASS\_WITH\_LIMITS discipline. It appears only as a prohibition, absence assertions, a failure-mode description, and a runner rejection condition — never as a fixture expected output.
- Gate and rejection. 08 §12.3 (package-assembly requirement) and §16.1 (runner rejection conditions) exist and reject PASS\_WITH\_LIMITS and aliases.
- Inventory match. The record's WDC-FIX-008/010/011 match 08 exactly; the alias-regression tests take the alias as input and produce canonical output.
- Scope and boundary. The record is honestly scoped as a static fixture-surface check (not runner execution, not implementation conformance), and §0 frames it as a verification candidate with closure reserved for c/a; the bridge set and nonclaim discipline are present.

There are no findings.

## 4. Findings

None. The 08 fixture gate is verified canonical-only with aliases confined to legacy-input/prohibited/crosswalk contexts and PASS\_WITH\_LIMITS confined to prohibition/rejection contexts, all against the actual 08 text, and the record correctly leaves closure to c/a.

## 5. Verdict rationale

There is no red line. The verification record correctly establishes that the 08 fixture pack's expected outputs use only the canonical 04 vocabulary, that historical aliases appear only as prohibited entries,

legacy inputs, source notes, or crosswalk rows (and the alias-regression fixtures deliberately feed an alias as input to confirm it maps to a canonical output), and that `PASS_WITH_LIMITS` never appears as a checker or fixture output — it is confined to prohibitions, absence assertions, and a runner rejection condition. These properties were confirmed against the actual 08 text, including §12.3 and §16.1, not merely against the record's claims. The record is honestly scoped — it checks the fixture surface, not a runner execution or implementation conformance — and reserves closure for *c/a*. The result is PASS.

The WDC-ASM-004 verification candidate is sound. *c/a* may now create a separate WDC-ASM-004 closure record (mirroring WDC-ASM-002/WDC-ASM-003) and update the manifest to WDC-ASM-004: CLOSED. The remaining work is WDC-ASM-005 (boundary/nonclaim scan, SE-0I-WDC-012) and WDC-ASM-001 (final assembly). This review performs no closure, assembly, or release; all such decisions remain with *c* and *a*.

## 6. Register handoff

No findings to register. Informational: on *c/a* closure of WDC-ASM-004, the manifest update (WDC-ASM-004: CLOSED) is WDC-ASM-001-adjacent package-control work and should be recorded there. Decision owner: *c-gate* + human anchor.

## 7. Closing

A review is itself a b-layer instrument. Here it confirms that a set of test fixtures speaks only the language the checker is supposed to speak: the expected answers are all canonical, the old words survive only where they are quarantined as prohibited, fed in as legacy input to prove they get translated, or listed in a crosswalk, and the one review-only verdict that must never come out of a checker is held out by prohibition and by an explicit rejection rule. The record proves this against the real fixture file and then, correctly, scopes itself to the fixture surface and hands the closure decision back to *c* and *a*. That is the right shape, so this check returns PASS.

Verdict: PASS.

08 fixture gate verified against actual text: canonical-only expected outputs; aliases only as legacy-input/prohibited/crosswalk; `PASS_WITH_LIMITS` only as prohibition/rejection, never as output. §12.3 package-assembly requirement and §16.1 runner rejection conditions present; WDC-FIX-008/010/011 inventory matches.

Honestly scoped as a static fixture-surface check (not runner execution / not conformance). Record does not self-close; WDC-ASM-004 ready for a separate *c/a* closure record.

No red line. No gate closure, assembly, or release performed. Decision remains with *c* and *a*.
