WDC-ASM-004 Gate Closure Review Record v0.1

Independent b-layer documentary-consistency review of the WDC-ASM-004 gate closure record

Status: Review record / package-control documentary check (advisory)

Date: 2026-06-27T19:19:20Z

Record ID: WDC_ASM_004_GATE_CLOSURE_REVIEW_RECORD_v0_1

Short name: WDC-ASM-004-CLOSURE-REVIEW v0.1

Reviewer role: semantic / package-control reviewer (CGAM b-layer worker; not c, not a)

Reviewer authority: advisory only (QR-AX-02); this record checks a document — it does NOT grant, ratify, or withhold gate-closure authority, which belongs to c/a

Result: PASS (documentary consistency)

Reviewed artifact: WDC_ASM_004_GATE_CLOSURE_RECORD_v0_1.md

Reviewed artifact SHA-256: b43be26458a82456b7ab0cfd4b15d400ce46b92e8726f32ae508266ac93e3ec6

> Important framing: the reviewed artifact is a c/a closure decision. This review checks whether that closure record is internally consistent, correctly bounded, and accurately grounded in the converged WDC-ASM-004 verification candidate. The PASS is a verdict on the document, not an authorization or ratification of the closure itself.

0. Reviewer boundary statement

Produced by a bounded CGAM review worker acting as a semantic / package-control reviewer. It did not author the reviewed artifact (QR-AX-01); it does not approve, integrate, close gates, assemble, or release (AX-03, AX-04, QR-AX-02). The reviewed artifact is a gate-closure record (a c/a decision); the reviewer checks only that it is well-formed and honestly bounded. The reviewer neither holds nor confers closure authority.

1. Machine-readable review record

```

2. Review scope

The reviewer read the full closure record (786 lines, all 14 sections) and checked it as a documentary artifact against the converged WDC-ASM-004 verification candidate (ff2c0431), the verification review (PASS), and the source 08 (4aa5b85e). It verifies internal consistency, scope, provenance accuracy, the authority boundary, the fixture-execution nonclaim, the general nonclaim discipline, the bridge set, and the manifest-propagation framing. It does not make, ratify, or override the closure decision.

Disposition vocabulary used is the pack result set: PASS | PASS_WITH_LIMITS | FAIL | BLOCKED | HELD | FROZEN | QUARANTINED | REVOKED | ROLLED_BACK | ESCALATED | INCONCLUSIVE | NOT_APPLICABLE | RED_LINE_FAIL.

3. Conformance checks passed (verified against the document)

The closure record is well-formed on every axis, parallel to the verified WDC-ASM-002/WDC-ASM-003 closure records, with an exemplary fixture-execution nonclaim.

- Authority boundary correct. §6 marks the review as b-layer evidence only, sets `self_closing_review`: false, and takes the closure on the basis of the review-level PASS.
- Provenance accurate. §3/§6 cite the verification candidate (ff2c0431), the verification review (PASS), and 08 (4aa5b85e).
- Scope limited. Only WDC-ASM-004 is closed; WDC-ASM-001/005/006 remain open.
- Internally consistent. §6 `manifest_effect` records the manifest update as a downstream WDC-ASM-001 obligation, and `verified_properties` match the verification review.
- Fixture-execution nonclaim exemplary. The record distinguishes a verified fixture surface from an executed runner and a certified checker, marking `fixture_runner_executed` and `checker_implementation_conformance_certified` false and propagating those false flags to the manifest.
- Nonclaim comprehensive and reopen policy sound. §6 sets every overclaim — including personhood/consciousness and AGI/sovereignty — false, and the reopen conditions cover release-surface misrepresentation and inaccurate manifest propagation.

There are no findings. One transparency note: the cited hash of the reviewer's own verification review is the author's sealed copy, correctly attributed but not independently verifiable.

4. Findings

None. The closure record is internally consistent, correctly scoped, accurately grounded, properly bounded, keeps closure authority with c/a, and does not overclaim fixture execution or conformance.

5. Verdict rationale

There is no red line. The closure record correctly attributes the WDC-ASM-004 closure to c/a, uses the verification review PASS as the basis rather than the authority, limits its scope to the single gate, grounds itself in the verification candidate and 08, records the manifest update as a downstream obligation, carries the bridge set, and — most notably — keeps the fixture-execution claim honest, marking the runner as not executed and the checker as not conformance-certified and propagating those false flags forward. As a documentary artifact it is sound, so the result is PASS.

The meaning of this PASS stays precise: it is a verdict on the document, not an authorization, ratification, or override of the closure, which is a c/a act. The next work is the downstream manifest

update under WDC-ASM-001, followed by WDC-ASM-005 (the last substantive gate, the boundary/nonclaim scan); none of that is performed here, and all of it remains with c and a.

6. Register handoff

No findings to register. Informational: the downstream manifest update recorded in §7 (WDC-ASM-004 CLOSED with `fixture_runner_executed` false and `checker_conformance_certified` false) is WDC-ASM-001 work and should be tracked there. Decision owner: c-gate + human anchor.

7. Closing

A review is itself a b-layer instrument. Pointed at a c/a decision, it confirms that the record of a closure is consistent, bounded, and honestly grounded — and here it has an extra thing to check, because a fixture gate could so easily be made to sound like proof that the software works. This record refuses that temptation: it says, in plain flags, that the fixtures were read and not run, and that nothing about a real checker was certified. The gate closes on c/a authority, on the basis of a b-layer PASS, and claims only the surface it checked. That is the right shape, so this check returns PASS and stops there.

Verdict: PASS (documentary consistency).

The closure record is internally consistent, correctly scoped, accurately grounded, and keeps closure authority with c/a.

Fixture-execution nonclaim exemplary: fixture surface verified yes, runner executed no, conformance certified no, propagated as false flags.

No findings. The PASS is a verdict on the document, not a ratification of the closure.

Next: manifest update under WDC-ASM-001 (WDC-ASM-004 CLOSED + false fixture/conformance flags); then WDC-ASM-005.

No red line. No gate closure, assembly, or release performed by this review. Decision remains with c and a.
