WDC-ASM-005 Boundary / Nonclaim Scan Review Record v0.1

Independent control-layer review of the WDC-ASM-005 boundary/nonclaim scan verification candidate

Status: Review record / package-control gate-review artifact (advisory)

Date: 2026-06-27T19:41:43Z

Record ID: WDC_ASM_005_BOUNDARY_NONCLAIM_SCAN_REVIEW_RECORD_v0_1

Short name: WDC-ASM-005-BOUNDARY-SCAN-REVIEW v0.1

Reviewer role: semantic / package-control reviewer (CGAM b-layer worker; not c, not a)

Reviewer authority: advisory only (QR-AX-02); this record is evidence, not approval, not gate closure, not assembly, not release

Result: PASS

Reviewed artifact: WDC_ASM_005_BOUNDARY_NONCLAIM_SCAN_RECORD_v0_1.md

Reviewed artifact SHA-256: b228956d03966a77f2b34dfb46d4ce3f93e1078c298b194f4bd1828709b5b64a

> Scope: this reviews the WDC-ASM-005 (SE-0I-WDC-012) boundary/nonclaim scan verification candidate. It does NOT close the gate, assemble, or release; gate closure is a separate c/a step.

> Status caveat (inherited from pack): private reference review record. Not a public release. Not a conformance certificate.

0. Reviewer boundary statement

Produced by a bounded CGAM review worker acting as a semantic / package-control reviewer. It did not author the reviewed artifact (QR-AX-01); it does not approve, integrate, close gates, assemble, or release (AX-03, AX-04, QR-AX-02).

Per the reviewer's standing discipline, the boundary-clean finding was tested against the actual text of the WDC v0.1.2 package files, not against the scan record's claims. The reviewer ran an independent targeted scan for high-risk affirmative overclaim patterns and inspected the context of every affirmative-looking hit.

    operates autonomously&quot;;
    result: &quot;PASS – zero occurrences&quot;;
  disclaimer_forms_present:
    result: &quot;PASS – nonclaim blocks present and correct (e.g., &#x27;It is not a conformance
certificate /
    does not prove personhood, consciousness, AGI, sovereignty&#x27;)&quot;;

verification_depth_note: &gt;
  The reviewer&#x27;s independent scan targeted the highest-risk affirmative overclaim patterns and
  inspected the context
  of every affirmative-looking hit; it was not an exhaustive re-scan of all term occurrences the
  record counts
  (record reports ~454 conformance/deployment + 71 identity + 23 autonomy occurrences, all in
  nonclaim/prohibition/
  forbidden-framing). Within the targeted scope, boundary-cleanliness is confirmed and is consistent
  with the record&#x27;s
  broader claim.

method_check:
  affirmative_vs_forbidden_framing_distinction: &quot;PASS – §4.2/§4.3 correctly separate active claims
  from prohibited/negated/forbidden-framing contexts&quot;;
  static_scope_honest: &quot;PASS – §1 states the scan is static text/flag checking; it does not execute
  code, run fixtures, audit repos, or make legal/safety determinations&quot;;

boundary_check:
  self_closes_gate: false
  note: &quot;§0/§1 state the record does not close WDC-ASM-005, does not assemble, does not release; &#x27;
It
  does not become c. It does not speak for a.&#x27; Result field is VERIFICATION_CANDIDATE_SOUND&quot;;
  result: &quot;PASS – correctly bounded&quot;;

conformance_checks_passed:
  bridge_set: &quot;PASS – explicit c=a+b + information theory + cybernetics + physiology + earth&quot;;
  nonclaim: &quot;PASS – the record is itself a nonclaim/boundary instrument and disclaims
  closure/assembly/release/legal-safety determination&quot;;

```

2. Review scope

The reviewer read the full scan record (522 lines, all 12 sections) and independently re-tested its boundary-clean finding against the actual WDC v0.1.2 package: all ten content/control files (03/04/05/07/08/09/10, the addendum, the patch index, and the manifest), whose hashes match the reviewer's accepted set. The independent test scanned for high-risk affirmative overclaim patterns — affirmative active flag-true settings, affirmative prose overclaims, identity overclaims, and guarantee language — and inspected the context of every affirmative-looking hit. The review checks the scan methodology, the boundary-clean finding, the static scope, the closure boundary, and the bridge set.

Disposition vocabulary used is the pack result set: PASS | PASS_WITH_LIMITS | FAIL | BLOCKED | HELD | FROZEN | QUARANTINED | REVOKED | ROLLED_BACK | ESCALATED | INCONCLUSIVE | NOT_APPLICABLE | RED_LINE_FAIL.

3. Conformance checks passed (verified against package text, not claims)

The boundary scan is sound and its finding is confirmed on the ground.

- No affirmative overclaims. The independent scan found zero affirmative active flag-true settings, zero affirmative identity overclaims (consciousness, sentience, personhood, AGI, sovereignty), and zero guarantee language.
- Affirmative-looking sentences are quarantined. The two affirmative-looking sentences in the package — "Self-Evo v0.1.2 is safe to deploy." and "WDC v0.1.2 certifies witness independence." — are both inside explicit forbidden-framing blocks (under "Forbidden public shorthand:" and "Forbidden framing:" respectively), i.e. quoted examples of claims that must not be made, not active claims.
- Disclaimers present. The nonclaim blocks are present and correct, including the negated witness-independence disclaimer.

- Method and scope honest. §4.2/§4.3 correctly separate active claims from prohibited/negated contexts; §1 scopes the scan as static text/flag checking that does not execute code, run fixtures, audit repositories, or make legal/safety determinations.
- Boundary and bridge set. §0/§1 reserve closure for c/a ("It does not become c. It does not speak for a."), and the bridge set is present.

There are no findings. One verification-depth note: the reviewer's independent scan targeted the highest-risk affirmative patterns rather than exhaustively re-scanning every term occurrence the record counts; within that scope the boundary-clean finding is confirmed and is consistent with the record's broader claim.

4. Findings

None. The package is boundary-clean at static text level — every occurrence of a dangerous claim term sits in a nonclaim, prohibition, or forbidden-framing context — and the record correctly leaves closure to c/a.

5. Verdict rationale

There is no red line. The verification record correctly establishes that the WDC v0.1.2 release-candidate surface makes no affirmative claim of conformance, deployment readiness, witness independence, personhood, consciousness, AGI, sovereignty, or autonomy: the terms appear only in nonclaim disclaimers, prohibition lists, and forbidden-framing blocks. The reviewer re-tested this against the actual package text for the highest-risk affirmative patterns and confirmed it, including by inspecting the two affirmative-looking sentences and finding both quarantined under explicit "Forbidden" headers. The scan methodology correctly distinguishes an active claim from a quoted prohibition, the scope is honestly limited to static text, and the record reserves closure for c/a. The result is PASS.

The WDC-ASM-005 verification candidate is sound. c/a may now create a separate WDC-ASM-005 closure record (mirroring the earlier gates) and update the manifest to WDC-ASM-005: CLOSED. After that, the only remaining gate is WDC-ASM-001 (final assembly); the package is then content-complete as a release candidate. This review performs no closure, assembly, or release; all such decisions remain with c and a.

6. Register handoff

No findings to register. Informational: on c/a closure of WDC-ASM-005, the manifest update (WDC-ASM-005: CLOSED) is WDC-ASM-001-adjacent package-control work and should be recorded there. Decision owner: c-gate + human anchor.

7. Closing

A review is itself a b-layer instrument. The job of a boundary scan is to make sure the package never says more than it proved, and the job of this review is to check that the scan actually looked — not just trusted its own summary. So the reviewer went back to the files and searched for the dangerous sentences directly. They are there, two of them, word for word the kind of thing that would be a lie if asserted; and both are caged under a "Forbidden" header, quoted only so the package can point at them and say *not this*. That is the difference between a claim and a warning, and the package is on the right side of it. The scan proves it against the real text and then, correctly, hands the closure decision back to c and a. So this check returns PASS.

Verdict: PASS.

Package boundary-clean at static text level: no affirmative overclaims; dangerous terms only in nonclaim/prohibition/forbidden-framing.
Independently confirmed against actual package text for high-risk affirmative patterns; the two affirmative-looking sentences are both quarantined under 'Forbidden' headers.
Method distinguishes active claim from quoted prohibition; scope honestly static. Record does not self-close; WDC-ASM-005 ready for a separate c/a closure record.
After WDC-ASM-005 closure, only WDC-ASM-001 (final assembly) remains.
No red line. No gate closure, assembly, or release performed. Decision remains with c and a.
