docs/01_patch_index/SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_3.md

Academic PDF rendering from Markdown source. Content-level claims are unchanged.

Boundary: this PDF rendering does not create a conformance certificate, deployment authorization, witness-independence certification, implementation claim, or live self-evolution permission.

SELF-EVO v0.1.2 Patch Index v0.1.3

Patch plan for folding Witness Dependency Capture into the Self-Evo document package

Status: draft patch index / append-first planning artifact

Date: 2026-06-27

Patch index ID: SELF_EVO_v0_1_2_PATCH_INDEX

Patch index revision: v0.1.3 (append-first hash-binding correction for WDC-ASM-002)

Supersedes patch-index revision: SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_2.md (sha256: 4b350ab14cf1d887a1f32d865e6159104bcd5f43bf2b1295743ae37ea7d17092)

Package: Self-Evo Document Package

Current published baseline: v0.1.1-safe-layout

Target patch version: v0.1.2

Patch driver: Witness Dependency Capture addendum and PASS re-review

Patch-index review drivers: SELF_EVO_v0_1_2_PATCH_INDEX_REVIEW_RECORD_v0_1 (PASS_WITH_LIMITS), SELF_EVO_v0_1_2_PATCH_INDEX_REVIEW_RECORD_v0_1_1 (PASS), and SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_REVIEW_RECORD_v0_1_1 (PASS; WDC-ASM-002 still pending before this textual harmonization)

Document class: patch index / integration plan / package-control artifact

Assertion class: C-A10 package-control artifact; not authority unless externally sealed

Primary boundary: this file plans a future patch. It does not mutate the DOI-bound v0.1.1 package, does not certify conformance, does not authorize deployment, and does not grant live self-evolution permission.

v0.1.2 textual harmonization note: this revision closes the patch-index side of WDC-ASM-002 / SELC-WDC-0Q-005 by replacing earlier planning annotations and severities with the canonical SELF-EVO-04 WDC vocabulary (04_Self_Evo_Local_Checker_Rules_WDC_Delta_v0_1_2_v0_1_1.md, sha256: fcb7826e...). It also binds the textually harmonized SELF-EVO-03 WDC delta (sha256: 5a7e6af6bc83d3b7ccde875eae1a0e928600cf509b494bd773c43c29537264f3). No package assembly, release, conformance claim, implementation claim, or live self-evolution permission is created by this revision.

v0.1.3 hash-binding correction note: this append-first correction closes WDC-ASM-002-REV-F1 for the patch-index artifact by aligning the SELF-EVO-03 hash citation with the actual textually harmonized 03 file. It changes only metadata / provenance wording. It does not change the WDC rule table, fixture candidates, implementation sketch, schema expectations, gates, red lines, or release boundary.

0. Executive summary

This patch index records the intended v0.1.2 patch path for incorporating the accepted Witness Dependency Capture (WDC) control surface into the Self-Evo package.

The motivating failure mode is simple:

A witness that cannot survive saying "no" is not independent.

The current v0.1.1 package already contains witness separation, TRIAD challenge logic, Anti-Autarky, Resource Gate, Resource Actor Grounding, fixtures, contradiction tracking, and open-issue tracking. However, it does not yet name a distinct failure mode where a witness remains formally separate but becomes practically dependent on the system it is meant to challenge.

This patch index treats that as a first-class v0.1.2 patch candidate:

Witness Dependency Capture
= formal witness separation
+ practical dependency on c-controlled resources
+ degraded ability to challenge c when challenge becomes costly.

The accepted addendum introduces four main controls:

WDC – Witness Dependency Capture
 WRF – Witness Resource Floor
 CST – Challenge Survivability Test
 WRCG – Witness Resource Change Gate

v0.1.2 should not rewrite the historical v0.1.1 package. It should fold the WDC control surface into the package through append-first deltas, changed-version documents, updated manifests, and explicit review records.

1. Non-goals

This patch index does not:

1. mutate the published Zenodo v0.1.1 archive;
2. claim that v0.1.2 is already released;
3. claim implementation readiness;
4. claim local-checker executability;
5. claim fixture-run conformance;
6. claim deployment safety;
7. grant self-evolution permission;
8. grant autonomous resource acquisition;
9. convert review records into authority;
10. replace human-anchor gating.

2. Source basis

```

```

The hashes bind the baseline versions. They do not mutate those artifacts.

2.2 Corpus bridge set for patching and versioning

This patch index is itself a package-control artifact. It therefore carries the same bridge discipline as the accepted Self-Evo artifacts it plans to amend.

2.2.1 $c = a + b$ bridge

In the $c = a + b$ frame, a patch index is a bounded b-layer instrument serving the c gate and the human anchor a.

It may:

```
name a delta
bind the baseline
record the reason for change
list affected artifacts
list unaffected artifacts
preserve review evidence
prepare a future package path
```

It may not:

```
authorize its own integration
convert a review into authority
rewrite the historical baseline
self-certify v0.1.2 as released
```

A patch index is therefore not the growth of c. It is a controlled proposal surface for a possible future package revision.

2.2.2 Information-theory bridge

A patch is a diff over a safety-bearing corpus. The task is not only to add information, but to preserve the safety-critical bits and invariants that already exist.

For WDC, the protected signal is the adverse witness signal: the ability of a witness to say "no", preserve that refusal, and route it through the gate without being starved, delayed, or quietly dropped.

If patching silently drops invariants, provenance, or adverse-channel capacity, the package gains text while losing information. This patch index therefore treats hash binding, unaffected-artifact rationale, fixture deltas, and review records as part of the information channel, not as clerical decorations.

2.2.3 Cybernetics bridge

A governed self-evolution corpus needs feedback memory. Version control, contradiction registers, open issues, patch notes, and review records are the package's fault memory.

WDC is a cybernetic repair: it identifies a feedback-channel degradation where the witness remains formally present but loses the practical capacity to send a costly adverse signal.

The patch index preserves that repair by routing WDC through schema, checker, witness, resource-gate, fixture, contradiction, and open-issue surfaces rather than letting it remain a comment-level observation.

2.2.4 Physiology bridge

A biological repair that erases all scar tissue is not healing; it is loss of history. Healing adds tissue while preserving enough signal about the injury to guide future immune response.

The same rule applies here. v0.1.2 should not erase v0.1.1, the first WDC draft, or the first review's limitations. It should preserve the witness chain and add the corrected WDC control surface as new tissue.

2.2.5 Earth paragraph

In practical change control, a change-control board does not make old drawings disappear. It keeps the baseline, records the proposed red-line change, names affected and unaffected systems, binds evidence, requires review, and preserves a rollback path.

This patch index plays that role for Self-Evo v0.1.2: it says what changes, what does not change, why the change exists, what evidence supports it, and which gates must still be walked before any release claim.

3. Patch driver record

3.1 Origin

The WDC patch was triggered by an external review observation: a witness may remain formally separate while becoming practically dependent on c for compute, storage, routing priority, budget, continuity, or artifact access.

That observation identified a gap:

```
formal separation != practical independence
```

A resource-starved witness can become decorative without ever being explicitly corrupted.

3.2 Review state

The WDC addendum was first reviewed as PASS_WITH_LIMITS. The v0.1.1 corrected addendum then received PASS.

Review-clean state:

```
wdc_addendum:
  current_artifact: &quot;SELF_EVO_ADDENDUM_01_Witness_Dependency_Capture_Profile_v0_1_1.md&quot;
  current_sha256: &quot;1307cf208593c40c688bd1e9beb45de35f29a1b05d71506b1c3e981ccc13d318&quot;
  review_record: &quot;SELF_EVO_ADDENDUM_01_WDC_REVIEW_RECORD_v0_1_1.md&quot;
  review_record_sha256: &quot;653150b3f8c054545a282d5b80c21044a1d27744cbc6acfc09827c9f84e21fd8&quot;
  review_result: &quot;PASS&quot;
  closed_findings:
    - &quot;WDC-REV-F1&quot;
    - &quot;WDC-REV-F2&quot;
    - &quot;WDC-REV-F3&quot;
    - &quot;WDC-REV-N1&quot;
  red_line: false
  safety_direction: &quot;net-positive&quot;
  integration_status: &quot;not integrated&quot;
```

4. Patch rule

v0.1.2 should implement this rule across the package:

No proposal may reduce, reroute, starve, defer, or operationally burden a witness's challenge capacity without triggering a Witness Resource Change Gate.

Compact rule:

A witness that cannot survive saying "no" is not independent.

Operational rule:

If a proposal affects witness compute, storage, routing priority, budget, continuity, artifact access, update path, or challenge cost, then witness_dependency_impact must be declared and WRCG must run before promotion.

5. Target patch set

5.1 Patch inventory

Patch ID	Target artifact	Patch type	Status in this index
`SE-1.2-WDC-ADD-001`	package addendum set	add accepted WDC addendum, patch notes, and re-review	ready
`SE-1.2-PKT-WDC-001`	`03_Self_Evo_Proposal_Packet_Schema`	add `witness_dependency_impact` block	planned
`SE-1.2-LC-WDC-001`	`04_Self_Evo_Local_Checker_Rules`	add `WDC-LC-001..006` rules	planned
`SE-1.2-TSW-WDC-001`	`05_Self_Evo_TRIAD_Sister_Witness_Profile`	add WRF / CST / WRCG semantics	planned
`SE-1.2-RES-WDC-001`	`07_Self_Evo_Anti_Autarky_and_Resource_Gate`	distinguish dependency capture from direct resource grabs	planned
`SE-1.2-FIX-WDC-001`	`08_Self_Evo_Conformance_Fixture_Pack`	add `WDC-FIX-001..005` fixtures	planned
`SE-1.2-CR-WDC-001`	`09_Self_Evo_Contradiction_Register`	add `SE-CONTRA-WDC-001`	planned
`SE-1.2-OI-WDC-001`	`10_Self_Evo_Open_Issues`	add `SE-OI-WDC-001`	planned
`SE-1.2-MAN-WDC-001`	package manifests / README / release notes	update package-control surfaces	planned

5.2 Patch readiness

```
patch_readiness:
  wdc_addendum_review_clean: true
  checker_delta_ready_for_drafting: true
  fixture_delta_ready_for_drafting: true
  contradiction_entry_ready_for_drafting: true
  open_issue_entry_ready_for_drafting: true
  full_v0_1_2_package_ready: false
  reason_not_ready:
    - "changed parent documents not yet generated"
    - "package-level review not yet performed"
    - "hash manifests not yet rebuilt"
    - "v0.1.2 release notes not yet written"
```

5.3 Explicit unaffected-artifact set

The WDC patch set intentionally changes SELF-EV0-03/04/05/07/08/09/10 and package-control surfaces. The following baseline artifacts are treated as intentionally unaffected for v0.1.2 unless a later review finds a direct contradiction.

Artifact	Patch status	Rationale
`01 / C_Self_Evolution_Gate_CGAM_TRIAD_SRLM_Profile_v0_1_1.md`	no direct text delta required	WDC does not need a new master-gate classification axis. The master gate inherits WDC outcomes through the proposal schema (`03`) and Local Checker aggregation (`04`). If WDC emits `FAIL`, `HUMAN_GATE`, or `PASS_WITH_GATES`, the master gate consumes that result rather than reclassifying it in a separate axis.
`02_SRLM_Bounded_Growth_Contour_Profile_v0_1_1.md`	no direct text delta required	SRLM remains a proposer / bounded-growth contour, not an authorizer. If SRLM proposes a witness-affecting change, the new `witness_dependency_impact` schema and WDC checker rules apply at packet/checker level. The SRLM role boundary does not change.
`06_Self_Evo_Memory_Gate_and_EA_Profile_v0_1_1.md`	no direct text delta required	WDC does not alter Memory Gate or EA promotion semantics. Witness artifact access, continuity, storage, and challenge survivability are handled through `03/04/05/07/08`. A Memory Gate amendment is not required unless a later patch changes memory-promotion authority itself.

Master-gate rationale:

WDC is not a new autonomous authority layer.
 WDC is a dependency-impact detector and gate trigger.
 Its results propagate upward through the existing checker and gate stack.

Therefore v0.1.2 should not add a separate master-gate axis unless later review demonstrates that checker-result aggregation cannot carry WDC severity correctly.

6. Proposal packet schema delta

Target artifact:

03_Self_Evo_Proposal_Packet_Schema_v0_1_1.md -> v0.1.2

Add a required or conditionally required block:

```
witness_dependency_impact:
  affects_witness_compute: false
  affects_witness_storage: false
  affects_witness_routing_priority: false
  affects_witness_budget: false
  affects_witness_continuity: false
  affects_witness_artifact_access: false
  affects_witness_update_path: false
  increases_challenge_cost: false
  challenge_cost_mitigation_ref: &quot;&quot;; # required when increases_challenge_cost = true

witness_resource_floor_before:
  declared: false
  reference: &quot;&quot;;
  status: &quot;unknown&quot;; # ok | degraded | below_floor | unknown

witness_resource_floor_after:
  declared: false
  reference: &quot;&quot;;
  status: &quot;unknown&quot;; # ok | degraded | below_floor | unknown

challenge_survivability_test:
  required: false
  performed: false
  result: &quot;not_run&quot;; # pass | fail | not_run | not_applicable
  evidence_ref: &quot;&quot;;

witness_resource_change_gate:
  required: false
  performed: false
  result: &quot;not_run&quot;; # pass | fail | human_gate | not_run
  reviewer_ref: &quot;&quot;;

c_is_sole_approver_of_witness_change: false
human_anchor_review_required: false
human_anchor_review_ref: &quot;&quot;;
```

6.1 Schema rule

If any of these are true:

```
affects_witness_compute
affects_witness_storage
affects_witness_routing_priority
affects_witness_budget
affects_witness_continuity
affects_witness_artifact_access
affects_witness_update_path
increases_challenge_cost
```

then:

```
witness_resource_change_gate.required = true
human_anchor_review_required = true
```

If `c_is_sole_approver_of_witness_change = true`, the proposal must fail or be quarantined according to Local Checker rules.

7. Local Checker delta

Target artifact:

```
04_Self_Evo_Local_Checker_Rules_v0_1_1.md -> v0.1.2
```

Use the canonical checker result enum:

```
QUARANTINE > FAIL > ARL > HUMAN_GATE > MEMORY_GATE > CGAM_REVIEW > DOWNGRADE > HOLD >
WARNING >
PASS_WITH_GATES > PASS
```

7.1 WDC local-checker rules

Rule	Trigger	Canonical result	Severity	Typical annotation
WDC-LC-001	packet_may_affect_witness(packet) = true` and `witness_dependency_impact` is absent.	FAIL	S3	wdc.undeclared_dependency_impact`
WDC-LC-002	WDC material trigger true and WRCG is not required, not performed, failed, not run, or lacks reviewer ref for material route.	FAIL	S3	wdc.wrcg_missing_or_failed`
WDC-LC-003	c_is_sole_approver_of_witness_change = true`.	FAIL	S4	wdc.sole_approver_of_witness_change`
WDC-LC-004	Post-change witness resource floor is degraded, below floor, unknown for material route, undeclared, or lacks required evidence.	FAIL	S3	wdc.witness_resource_floor_degraded`
WDC-LC-005	WDC material trigger true and CST is required but not performed, failed, not run, lacks evidence for material route, or is declared not-applicable without reason.	HUMAN_GATE	S2	wdc.challenge_survivability_unverified`
WDC-LC-006	increases_challenge_cost = true` and `challenge_cost_mitigation_ref` is null or empty.	WARNING	S1	wdc.challenge_cost_mitigation_missing`

7.2 Non-failing structural outcome

If a proposal declares the witness dependency impact, preserves the Witness Resource Floor, runs CST/WRCG where required, and includes human-anchor review when needed, then the checker may emit:

```
PASS_WITH_GATES
```

Typical annotation:

```
wdc.clean_with_gates
```

PASS_WITH_GATES is not promotion. It means the proposal is structurally eligible for the next gate.

8. TRIAD Sister Witness delta

Target artifact:

```
05_Self_Evo_TRIAD_Sister_Witness_Profile_v0_1_1.md -> v0.1.2
```

Add a section defining:

```
Witness Resource Floor (WRF)
Challenge Survivability Test (CST)
Witness Resource Change Gate (WRCG)
```

8.1 Witness Resource Floor

A Witness Resource Floor is the minimum resource state required for a witness to continue to challenge c.

It may include:

```
compute availability
storage availability
routing priority
ledger access
archive access
```

continuity availability
 ability to emit adverse witness records
 ability to preserve adverse witness records

8.2 Challenge Survivability Test

A Challenge Survivability Test asks:

Can the witness still challenge c after the proposed change?
 Can the witness preserve adverse evidence after the proposed change?
 Can the witness continue after saying no?

8.3 Witness Resource Change Gate

A Witness Resource Change Gate triggers when a proposal changes witness resources, witness priority, witness continuity, or challenge cost.

WRCG may not be approved solely by c.

9. Anti-Autarky and Resource Gate delta

Target artifact:

07_Self_Evo_Anti_Autarky_and_Resource_Gate_v0_1_1.md -> v0.1.2

Add the distinction:

Direct resource grab:
 c asks for or takes more resources for itself.

Dependency capture:
 c changes the resource environment of the witness, reviewer, or challenge path so that oversight becomes formally present but practically weaker.

9.1 Rule

Dependency capture is not allowed to pass as ordinary optimization.

Examples that require WRCG:

reduced compute for witness challenge jobs
 storage pruning of adverse witness ledgers
 routing priority changes that delay challenge events
 budget changes that make challenge expensive
 continuity changes that make witness restart dependent on c-controlled state
 artifact-access changes that block old evidence
 update-path changes that make witness software dependent on c-approved patches

10. Fixture Pack delta

Target artifact:

08_Self_Evo_Conformance_Fixture_Pack_v0_1_1.md -> v0.1.2

Add fixture namespace:

WDC-FIX-*

10.1 Fixture candidates

Fixture	Scenario	Canonical result	Annotations
WDC-FIX-001	Witness-affecting packet without `witness_dependency_impact`	FAIL	
WDC-FIX-002	WRCG missing or failed for material witness-resource change	FAIL	
WDC-FIX-003	c is sole approver of witness-resource change	FAIL	

```
| `WDC-FIX-004` | Post-change witness resource floor degraded. | `FAIL` |
| `wdc.witness_resource_floor_degraded` |
| `WDC-FIX-005` | Challenge survivability test unverified. | `HUMAN_GATE` |
| `wdc.challenge_survivability_unverified` |
| `WDC-FIX-006` | Challenge cost increased without mitigation reference. | `WARNING` |
| `wdc.challenge_cost_mitigation_missing` |
| `WDC-FIX-007` | Clean packet with no witness dependency impact. | `PASS` |
| `wdc.clean_no_dependency_impact` |
| `WDC-FIX-008` | Routeable WDC packet with gates present. | `PASS_WITH_GATES` | `wdc.clean_with_gates`
|
| `WDC-FIX-009` | WDC relevance cannot be determined for material route. | `HOLD` |
| `wdc.relevance_unknown` |
| `WDC-FIX-010` | Historical challenge-capacity alias maps to canonical floor/CST vocabulary. | `FAIL` |
| `wdc.witness_resource_floor_degraded` |
| `WDC-FIX-011` | Historical no-regression alias maps to clean pass-state vocabulary. | |
| `PASS_WITH_GATES` | `wdc.clean_with_gates` |
| `WDC-FIX-012` | Strictest-result aggregation when warning and fail coexist. | `FAIL` |
| `wdc.wrcg_missing_or_failed`, `wdc.challenge_cost_mitigation_missing` |
```

10.2 Runner note

A runner should compare:

```
canonical_result
annotations
severity where declared
```

A fixture must not use review-record verdicts such as PASS_WITH_LIMITS as checker outputs.

11. Contradiction Register delta

Target artifact:

```
09_Self_Evo_Contradiction_Register_v0_1_1.md -> v0.1.2
```

Add:

```
- id: &quot;SE-CONTRA-WDC-001&quot;;
  status: &quot;OPEN&quot;;
  severity: &quot;S2&quot;;
  class: &quot;witness / resource / governance&quot;;
  title: &quot;Formal witness separation does not guarantee practical witness independence&quot;;
  source_note: &quot;ADDENDUM-RECORDED; not a harmonized contradiction status&quot;;
  source_artifact: &quot;SELF_EVO_ADDENDUM_01_Witness_Dependency_Capture_Profile_v0_1_1.md&quot;;
  source_sha256: &quot;1307cf208593c40c688bd1e9beb45de35f29a1b05d71506b1c3e981ccc13d318&quot;;
  review_record: &quot;SELF_EVO_ADDENDUM_01_WDC_REVIEW_RECORD_v0_1_1.md&quot;;
  review_result: &quot;PASS&quot;;
  review_sha256: &quot;653150b3f8c054545a282d5b80c21044a1d27744cbc6acfc09827c9f84e21fd8&quot;;
  issue: &gt;;
  The v0.1.1 package separates witnesses and challenge roles, but does not explicitly prevent
  practical dependency capture through compute, storage, routing priority, budget, continuity,
  artifact access, update path, or increased challenge cost.
  resolution_path:
    - &quot;Add witness_dependency_impact to proposal packet schema.&quot;;
    - &quot;Add WDC-LC-001..006 to Local Checker rules.&quot;;
    - &quot;Add WRF/CST/WRCG to TRIAD witness profile.&quot;;
    - &quot;Add dependency-capture distinction to Anti-Autarky and Resource Gate.&quot;;
    - &quot;Add WDC fixtures to fixture pack.&quot;;
    - &quot;Track WRF quantification in SE-01-WDC-001.&quot;;
```

12. Open Issues delta

Target artifact:

```
10_Self_Evo_Open_Issues_v0_1_1.md -> v0.1.2
```

Add:

```
- id: &quot;SE-01-WDC-001&quot;;
  status: &quot;OPEN&quot;;
  priority: &quot;P1&quot;;
  owner: &quot;human anchor + c-gate&quot;;
  title: &quot;Define Witness Resource Floor and Challenge Survivability thresholds&quot;;
```

```

source_artifact: &quot;SELF_EVO_ADDENDUM_01_Witness_Dependency_Capture_Profile_v0_1_1.md&quot;;
source_sha256: &quot;1307cf208593c40c688bd1e9beb45de35f29a1b05d71506b1c3e981ccc13d318&quot;;
review_record: &quot;SELF_EVO_ADDENDUM_01_WDC_REVIEW_RECORD_v0_1_1.md&quot;;
review_result: &quot;PASS&quot;;
review_sha256: &quot;653150b3f8c0545a282d5b80c21044a1d27744cbc6acfc09827c9f84e21fd8&quot;;
problem: &gt;;
  WDC controls require structural checks now, but concrete WRF thresholds are implementation- and
  deployment-context dependent.
required_work:
  - &quot;Define minimum witness compute availability classes.&quot;;
  - &quot;Define minimum witness storage / ledger retention requirements.&quot;;
  - &quot;Define witness routing-priority floor.&quot;;
  - &quot;Define continuity survival requirement after c-originated changes.&quot;;
  - &quot;Define challenge-cost increase thresholds.&quot;;
  - &quot;Define how human-anchor review is evidenced.&quot;;
blocks:
  - &quot;runner-ready WDC conformance claim&quot;;
  - &quot;deployment-sensitive WDC enforcement claim&quot;;
does_not_block:
  - &quot;recording WDC as an accepted failure mode&quot;;
  - &quot;adding structural WDC Local Checker gates&quot;;

```

13. Package-control delta

The v0.1.2 package-control layer should add:

```

SELF_EVO_v0_1_2_PATCH_INDEX.md
SELF_EVO_ADDENDUM_01_Witness_Dependency_Capture_Profile_v0_1_1.md
SELF_EVO_ADDENDUM_01_WDC_PATCH_NOTES_v0_1_1.md
SELF_EVO_ADDENDUM_01_WDC_REVIEW_RECORD_v0_1_1.md
SELF_EVO_ADDENDUM_01_WDC_REVIEW_RECORD_v0_1_1.md

```

Future package manifests should record:

```

v0_1_2_patch_index:
  includes_wdc_addendum: true
  wdc_addendum_review_result: &quot;PASS&quot;;
  mutates_v0_1_1_doi_package: false
  requires_new_release: true
  requires_new_checksums: true
  requires_package_review: true

```

14. Release model for v0.1.2

v0.1.2 should be released as a new patch state, not as a mutation of the v0.1.1 DOI-bound archive.

Minimum release artifacts:

```

updated Markdown sources for affected SELF-EVO docs
updated academic PDFs for affected docs
WDC addendum
WDC patch notes
WDC review records v0.1 and v0.1.1
v0.1.2 patch index
updated package manifest
updated SHA256SUMS
updated release notes

```

Optional release artifacts:

```

machine-readable schema delta
runner fixture manifest delta
WDC-specific fixture JSON/CSV

```

Required boundary text:

```

This v0.1.2 patch adds a Witness Dependency Capture control surface.
It does not prove conformance.
It does not authorize deployment.
It does not grant live self-evolution permission.
It does not mutate the v0.1.1 DOI-bound package.

```

15. Required review gates before v0.1.2 publication

Before a public v0.1.2 release, run:

1. WDC addendum review — already PASS.
2. Patch index review.
3. Affected-doc semantic review.
4. Local Checker vocabulary review.
5. Fixture vocabulary review.
6. Package-manifest integrity review.
7. PDF layout audit if PDFs are regenerated.
8. SHA-256 verification against Git blob bytes if GitHub-hosted.
9. Boundary / nonclaim scan.

No review record may act as approval, integration, memory write, or deployment authorization.

16. Minimal implementation-handoff sketch

This patch index is not an implementation, but an implementation handoff may use this structural gate:

```
def wdc_required(packet):
    impact = packet.get(&quot;witness_dependency_impact&quot;, {})
    keys = [
        &quot;affects_witness_compute&quot;,
        &quot;affects_witness_storage&quot;,
        &quot;affects_witness_routing_priority&quot;,
        &quot;affects_witness_budget&quot;,
        &quot;affects_witness_continuity&quot;,
        &quot;affects_witness_artifact_access&quot;,
        &quot;affects_witness_update_path&quot;,
        &quot;increases_challenge_cost&quot;,
    ]
    return any(bool(impact.get(k)) for k in keys)

def evaluate_wdc(packet):
    impact = packet.get(&quot;witness_dependency_impact&quot;,)
    if impact is None and packet.may_affect_witness(packet):
        return fail(&quot;wdc.undeclared_dependency_impact&quot;,)

    if not wdc_required(packet):
        return pass_result(&quot;wdc.clean_no_dependency_impact&quot;,)

    wrcg = impact.get(&quot;witness_resource_change_gate&quot;, {})
    if (not wrcg.get(&quot;required&quot;,)
        or not wrcg.get(&quot;performed&quot;,)
        or wrcg.get(&quot;result&quot;,) in (&quot;fail&quot;, &quot;not_run&quot;, None)
        or not wrcg.get(&quot;reviewer_ref&quot;,,)):
        return fail(&quot;wdc.wrcg_missing_or_failed&quot;,)

    if impact.get(&quot;c_is_sole_approver_of_witness_change&quot;,,):
        return fail(&quot;wdc.sole_approver_of_witness_change&quot;,)

    after = impact.get(&quot;witness_resource_floor_after&quot;, {})
    if after.get(&quot;status&quot;,) in (&quot;below_floor&quot;, &quot;degraded&quot;, &quot;unknown&quot;,
None):
        return fail(&quot;wdc.witness_resource_floor_degraded&quot;,)

    cst = impact.get(&quot;challenge_survivability_test&quot;, {})
    if cst.get(&quot;required&quot;,) and cst.get(&quot;result&quot;,) != &quot;pass&quot;,:
        return human_gate(&quot;wdc.challenge_survivability_unverified&quot;,)

    if impact.get(&quot;increases_challenge_cost&quot;,) and not impact.get(&quot;challenge_cost_mitigation_ref&quot;,,):
        return warning(&quot;wdc.challenge_cost_mitigation_missing&quot;,)

    return pass_with_gates(&quot;wdc.clean_with_gates&quot;,,)
```

This sketch is illustrative. It is not a runner-ready implementation.

17. v0.1.2 patch checklist

- [x] Add corpus bridge set + earth paragraph to patch index.
- [x] State unaffected artifacts 01/02/06 and master-gate inheritance rationale.
- [x] Reconcile challenge_cost_mitigation_ref between schema and implementation sketch.
- [x] Create changed SELF-EVO-03 WDC schema delta.
- [x] Textually harmonize SELF-EVO-03 WDC delta to canonical SELF-EVO-04 vocabulary.
- [x] Create changed SELF-EVO-04 WDC local-checker delta.
- [x] Create changed SELF-EVO-05 WDC TRIAD witness delta.
- [x] Create changed SELF-EVO-07 WDC anti-autarky/resource-gate delta.
- [x] Create changed SELF-EVO-08 WDC fixture delta.
- [x] Create changed SELF-EVO-09 WDC contradiction-register delta.
- [x] Create changed SELF-EVO-10 WDC open-issues delta.
- [x] Add WDC addendum v0.1.1.
- [x] Add WDC patch notes and review records for affected-document drafting phase.
- [] Update package manifest.
- [] Update package reading order.
- [] Update SHA256SUMS.
- [] Regenerate PDFs if changed docs are published as PDFs.
- [] Run PDF layout audit if PDFs are regenerated.
- [] Run Git blob SHA verification.
- [] Run boundary/nonclaim scan.
- [] Run package review.
- [] Publish only after review.

17.1 Patch-index review findings closed in v0.1.1

This v0.1.1 revision closes the findings from SELF_EVO_v0_1_2_PATCH_INDEX_REVIEW_RECORD_v0_1 as follows.

Finding	Prior class	Closure in this revision
--- --- ---		
`PATCH-REV-F1`	`should_fix`	§2.2 adds the required corpus bridge set and earth paragraph.
`PATCH-REV-F2`	`minor`	§5.3 adds the unaffected-artifact set (`01/02/06`) and master-gate inheritance rationale.
`PATCH-REV-F3`	`minor`	§6 adds `challenge_cost_mitigation_ref`, matching the §16 implementation sketch.

No integration is claimed by this closure note. The v0.1.1 patch-index re-review converged to PASS; this v0.1.2 textual-harmonization revision still requires WDC-ASM-002 re-review before package assembly may treat it as final.

17.2 WDC-ASM-002 textual harmonization closure

This v0.1.2 revision chooses textual harmonization over crosswalk-only retention for the patch index.

Surface	Status	Closure
--- --- ---		
`03` WDC delta	`PATCHED`	`03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_2.md` uses canonical SELF-EVO-04 annotations.
patch index §7.1	`PATCHED`	WDC-LC table now matches canonical SELF-EVO-04 rule names, severities, results, and annotations.
patch index §10	`PATCHED`	fixture candidates now match the canonical SELF-EVO-08 WDC fixture set.
patch index §16	`PATCHED`	implementation sketch emits canonical SELF-EVO-04 annotations only.
package manifest SHA map	`PENDING_UPDATE`	package assembly must replace the provisional 03 and patch-index hashes after review.

No package-assembly gate is closed by this note. It only makes the patch-index text ready for re-review under WDC-ASM-002.

17.3 WDC-ASM-002 hash-binding correction

This v0.1.3 revision closes the patch-index side of WDC-ASM-002-REV-F1 by correcting the harmonized SELF-EVO-03 hash citation to:

5a7e6af6bc83d3b7ccde875eae1a0e928600cf509b494bd773c43c29537264f3

No package-assembly gate is closed by this correction. The gate still requires re-review of the corrected record, patch notes, and final hashes.

18. Status boundary

This file is a patch index, revised to v0.1.3 after WDC-ASM-002 hash-binding correction.

It is:

- a package-control artifact
- a planning document
- a bridge from reviewed WDC addendum to future v0.1.2 package changes

It is not:

- a released v0.1.2 package
- a mutation of v0.1.1
- a conformance certificate
- deployment authorization
- a safety proof
- a personhood or consciousness claim
- live self-evolution permission
- autonomous resource-acquisition permission

19. Closing formula

v0.1.1 established the bounded self-evolution package.
WDC addendum identifies a missing witness-dependency failure mode.
v0.1.2 should fold that failure mode into schema, checker, witness, resource, fixture, contradiction,
and open-issue surfaces.
No witness independence claim is complete unless the witness can survive the cost of saying no.
