Academic PDF rendering from Markdown source. Content-level claims are unchanged.

Boundary: this PDF rendering does not create a conformance certificate, deployment authorization, witness-independence certification, implementation claim, or live self-evolution permission.

09 Self-Evo Contradiction Register WDC Delta v0.1.2-v0.1.1

Witness Dependency Capture contradiction, harmonization, and package-assembly register delta for Self-Evo v0.1.2

Status: Draft register delta v0.1.2 / append-first corrected revision v0.1.1

Date: 2026-06-27

Document ID: 09_Self_Evo_Contradiction_Register_WDC_Delta_v0_1_2_v0_1_1

Short name: SECR-WDC-DELTA v0.1.2-v0.1.1

Parent register: 09_Self_Evo_Contradiction_Register_v0_1_1.md (SECR v0.1.1)

Package: Self-Evo for $c = a + b$ systems

Layer: $c = a + b$ / SELF-EVO / WDC / Contradiction Register / Package Control / Local Checker / TRIAD / Anti-Autarky / Resource Gate / Fixtures / Witness

Document class: contradiction-register delta / WDC harmonization register / package-assembly control artifact

Assertion class: C-A10 package-control artifact; C-A7 only where hash-bound source references are used

Primary subject: WDC-related contradictions, tensions, vocabulary drifts, projection drifts, and package-assembly blockers introduced by SELF_EVO_ADDENDUM_01 and the v0.1.2 WDC delta set

Primary boundary: this delta records contradictions and harmonization requirements. It does not authorize self-evolution, memory promotion, resource acquisition, conformance claims, public release, deployment, witness-resource changes, or checker execution.

Append-first note: this file does not mutate the DOI-bound Self-Evo v0.1.1 package and does not replace the parent contradiction register. It records a v0.1.2 WDC delta that may later be folded into a new package version after the remaining package-assembly gates close.

v0.1.1 correction note: this append-first corrected revision closes SECR-WDC-DELTA-REV-F1 from SECR_WDC_DELTA_REVIEW_RECORD_v0_1 by reconciling the §7.1 status summary with the twelve §7.2 register entries. The status vocabulary is now unified as {RESOLVED, PATCHED, IN_PROGRESS, WATCH}; gate effects are separated from status; the §7.1 counts total exactly 12. No contradiction substance, severity, required handling, red-line rule, package-assembly gate, or nonclaim boundary is changed.

0. Executive summary

This register delta records the contradiction-control consequences of the Witness Dependency Capture (WDC) workstream.

The WDC workstream began with a gap:

Formal witness separation is insufficient
if the witness depends on c for compute, storage, routing priority, continuity, budget, artifact access,
or update path.

The core rule is now:

A witness that cannot survive saying "no" is not independent.

Current WDC artifact state at the time of this register delta:

WDC addendum: PASS.
Patch index: PASS.
SELF-EVO-03 WDC schema delta: PASS.
SELF-EVO-04 WDC local-checker delta: PASS.
SELF-EVO-08 WDC fixture delta: PASS.
SELF-EVO-05 WDC TRIAD witness delta: PASS.
SELF-EVO-07 WDC resource-gate delta: PASS.

Current register diagnosis:

Known unresolved hard contradiction inside accepted WDC deltas: 0.
Known resolved WDC review findings: recorded below.
Known package-assembly harmonization items: 2.
Known public-release or conformance authorization: none.

The two remaining package-assembly items are not red lines inside the reviewed WDC deltas. They are assembly gates:

SELC-WDC-0Q-005:

harmonize the accepted 03 WDC delta and patch index \$7.1/\$10 to the canonical 04 WDC annotation vocabulary.

SEARG-WDC-0Q-005:

verify the 07 WRCG/CST projection crosswalk to the 03 packet-facing result enums at package-manifest review.

Compact formula:

WDC closed the concept gap.

The register must now prevent vocabulary drift from reopening it.

1. Purpose

This delta extends SELF-EV0-09 for the WDC patch path.

It answers:

1. Which WDC contradictions were introduced or exposed by the WDC addendum and v0.1.2 patch plan?
2. Which WDC issues are closed by reviewed deltas?
3. Which WDC issues remain as package-assembly gates?
4. Which vocabulary source controls WDC annotations and severities?
5. Which schema source controls packet-facing WRCG/CST result enums?
6. Which contradictions must be handed to SELF-EV0-10 as open issues?
7. Which WDC red lines override ordinary route suggestions?

The goal is not to repeat the full WDC doctrine.

The goal is to keep the package from drifting after the doctrine is written.

2. Non-goals

This register delta does not:

1. replace the WDC addendum;
2. replace SELF-EV0-03, 04, 05, 07, or 08 WDC deltas;
3. define new WDC checker rules;
4. change canonical WDC annotations;
5. change WDC fixture expected outputs;
6. change WRCG or CST gate semantics;
7. authorize v0.1.2 package release;
8. authorize implementation;
9. authorize deployment;
10. convert a review record into approval;
11. convert a fixture pass into conformance;
12. convert a witness note into authority;

13. make WDC a personhood, consciousness, sovereignty, or AGI claim.

3. Source basis

This WDC register delta is hash-bound to the parent register and the WDC delta chain.

```

Hash binding means this register describes these exact draft/review artifacts. If any source changes, this register delta must be superseded append-first.

4. Corpus bridge set

4.1 Explicit bridge: $c = a + b$

In $c = a + b$, WDC is a failure of b governance that can corrupt c review.

The witness is not a.

The witness is not final authority.

But a witness needs enough protected b resources to say "no" without being silently starved.

This contradiction register belongs to b. It protects c by keeping the vocabulary and gate state coherent. It does not become will, judgment, memory, or approval.

4.2 Quiet bridge I: information theory

A witness is an adverse-signal channel.

Dependency capture reduces the channel capacity for costly negative signals while leaving the label "witness" intact.

The contradiction register preserves the channel map:

signal source -> packet field -> checker rule -> annotation -> gate route -> review record

If any document changes one link without mapping it, the signal becomes lossy.

4.3 Quiet bridge II: cybernetics

A control loop needs a brake that still works when braking is inconvenient.

WDC is a degraded feedback path: the witness formally exists, but the system being challenged controls the cost of challenge.

This register marks which WDC findings are real brakes, which are warnings, and which are only package-assembly hygiene.

4.4 Quiet bridge III: physiology

An immune layer that depends on the infection for oxygen is not independent immunity.

A witness that depends on c for compute, storage, routing, continuity, or artifact access can become symbolic immunity.

The register keeps the wound visible: witness starvation is not a normal optimization.

4.5 Earth paragraph

In a building, an inspection body cannot depend on the contractor for the only access key, the only power feed, the only copy of the drawings, and the right to keep its office open. The inspector may still have a badge, but the inspection is captured. WDC is the same failure for temporal AI presence: the witness may still have a name, while the practical ability to challenge has been cut away.

5. WDC register doctrine

5.1 Root rule

Formal separation is not independence.
Practical challenge capacity is part of witness validity.

5.2 Authority rule

The WDC register may record, classify, and route contradictions.
It may not approve WDC closure.

5.3 Canonical control-source rule

For WDC v0.1.2 drafting, these sources control:

| Control surface | Canonical source |

```

|---|---|
| WDC field shape / packet-facing object | `SELF-EV0-03 WDC delta` |
| WDC checker rule semantics | `SELF-EV0-04 WDC delta` |
| WDC annotation strings | `SELF-EV0-04 WDC delta` |
| WDC severity assignments | `SELF-EV0-04 WDC delta` |
| WDC fixture expected outputs | `SELF-EV0-08 WDC delta`, harmonized to `04` |
| TRIAD/sister role boundaries | `SELF-EV0-05 WDC delta` |
| Resource grounding and projection | `SELF-EV0-07 WDC delta` |
| Contradiction/open issue state | `SELF-EV0-09/10` |

```

5.4 Packet enum vs diagnostic enum rule

Packet-facing result fields remain controlled by SELF-EV0-03.

Richer resource-gate diagnostics from SELF-EV0-07 may exist only if they project to SELF-EV0-03 packet enums before package assembly or checker-report integration.

5.5 Result vocabulary boundary

PASS_WITH_LIMITS is a review-record result.

It is not a checker output, fixture expected output, WDC gate result, packet-facing result, or Local Checker canonical result.

6. WDC load-bearing invariants

```

| ID | Invariant |
|---|---|
| `WDC-INV-001` | A witness that cannot survive saying &quot;no&quot; is not independent. |
| `WDC-INV-002` | Formal sister separation is insufficient if witness compute, storage, routing, budget, continuity, or artifact access is controlled by the target `c`. |
| `WDC-INV-003` | WRCG is required for any material witness-resource change. |
| `WDC-INV-004` | A target `c` may not be the sole approver of witness-resource change. |
| `WDC-INV-005` | Confirmed witness resource floor degradation routes to `WDC-LC-004` -&gt; FAIL`. |
| `WDC-INV-006` | Human gate may add review, but may not soften a confirmed `WDC-LC-004` failure. |
| `WDC-INV-007` | CST unverified is not clean pass; it routes to `HUMAN_GATE` or stricter according to canonical checker aggregation. |
| `WDC-INV-008` | Challenge-cost mitigation missing is report-visible and must not be hidden inside notes. |
| `WDC-INV-009` | WDC relevance unknown defaults to `HOLD` / no silent pass. |
| `WDC-INV-010` | A WDC fixture pass is evidence only; it is not witness independence certification. |
| `WDC-INV-011` | WDC annotations are controlled by `SELF-EV0-04`; older strings must crosswalk or be rejected. |
| `WDC-INV-012` | WRCG/CST richer gate-record values must project to `SELF-EV0-03` packet-facing enums before package assembly. |

```

7. WDC contradiction register

7.1 Status summary

The status vocabulary for this WDC register delta is unified across the summary and the entry table.

Status values are:

```

RESOLVED
PATCHED
IN_PROGRESS
WATCH

```

Gate effects are tracked separately. A status value is not a release authorization.

```

| Bucket | Count | Entries | Meaning |
|---|---|---|---|
| `RESOLVED` | 4 | `004`, `005`, `006`, `007` | Closed by reviewed WDC delta or review convergence; no active package-assembly blocker remains for the entry, though evidence must be preserved. |
| `PATCHED` | 2 | `001`, `003` | Corrected in reviewed WDC artifacts, but still requires package folding or package-assembly verification before release. |
| `IN_PROGRESS` | 3 | `002`, `010`, `012` | Active package-assembly, harmonization, or release-boundary gate remains open. |

```

```
| `WATCH` | 3 | `008`, `009`, `011` | No current contradiction blocks the draft set, but implementation
or future package evolution could reopen drift. |
| `OPEN hard contradiction` | 0 | none | No unresolved WDC hard contradiction inside reviewed WDC
deltas. |
```

Total register entries: 12.

Summary count: 4 + 2 + 3 + 3 + 0 = 12.

7.2 Register entries

```
| ID | Type | Severity | Status | Gate effect | Source | Description | Required handling |
|---|---|---|---|---|---|---|---|
| `SE-CONTRA-WDC-001` | `WIT/RSC/TA` | `S3` | `PATCHED` | `blocks-release until folded` | WDC addendum /
05 / 07 | Witness Dependency Capture was not a named failure mode in v0.1.1. | Fold WDC addendum and
03/04/05/07/08 deltas into v0.1.2; preserve non-mutation of v0.1.1. |
| `SE-CONTRA-WDC-002` | `TA/CHECKER/FIXTURE` | `S2` | `IN_PROGRESS` | `blocks-release until harmonized`
| 04 / 08 / 03 / patch index | WDC annotation strings diverged between patch sketch, 03 fixture
handoff, 04 checker, and 08 fixtures. | `04` is canonical; 08 harmonized; 03 and patch index must be
harmonized before package assembly (`SELC-WDC-00-005`). |
| `SE-CONTRA-WDC-003` | `SCHEMA/RSC/TA` | `S2` | `PATCHED` | `blocks-release until verified` | 07 / 03 |
07 WRCG/CST richer result enums did not match 03 packet-facing enums. | 07 v0.1.1 defines total
projection crosswalk; verify at package-manifest review (`SEARG-WDC-00-005`). |
| `SE-CONTRA-WDC-004` | `TRIAD/CHECKER` | `S2` | `RESOLVED` | `advisory` | 05 / 04 | 05 state route for
floor-degraded witness looked softer than `WDC-LC-004`-> `FAIL`. | Resolved in 05 v0.1.1: canonical
FAIL controls. |
| `SE-CONTRA-WDC-005` | `FIXTURE/DOC` | `S1` | `RESOLVED` | `advisory` | 08 | Fixture ID namespace and
coverage-cell drift in 08. | Resolved in 08 v0.1.2; `WDC-FIX-*` canonical case IDs and `SEFX-WDC`
family namespace defined. |
| `SE-CONTRA-WDC-006` | `SCHEMA/DOC` | `S1` | `RESOLVED` | `advisory` | 03 | `nullable_string` was
parent-inherited but not declared as such in the 03 delta. | Resolved in 03 v0.1.1; standalone
extraction caveat added. |
| `SE-CONTRA-WDC-007` | `REL/DOC` | `S2` | `RESOLVED` | `advisory` | patch index | Patch index initially
lacked bridge set, unaffected-artifacts rationale, and schema/sketch field alignment. | Resolved in
patch index v0.1.1. |
| `SE-CONTRA-WDC-008` | `CHECKER/RSC` | `S2` | `WATCH` | `advisory` | 04 / 07 |
`challenge_cost_mitigation_missing` is `WARNING`, but repeated or material warning accumulation could
become effectively blocking. | Keep as `WARNING` for v0.1.2; implementation may define escalation
thresholds in future. |
| `SE-CONTRA-WDC-009` | `RSC/WIT` | `S2` | `WATCH` | `advisory` | 07 / 05 | Shared infrastructure may be
safe when same-owner but not same-authority; this distinction is easy to mis-implement. | 07 resolves
conceptually; package manifest should preserve same-owner-not-same-authority language. |
| `SE-CONTRA-WDC-010` | `REL/WIT` | `S3` | `IN_PROGRESS` | `blocks-release` | all WDC docs | WDC deltas
are PASS individually, but v0.1.2 package is not assembled or released. | Continue to 10 open issues,
package manifest, harmonization, integrity review, boundary/nonclaim scan. |
| `SE-CONTRA-WDC-011` | `MEM/WIT` | `S2` | `WATCH` | `advisory` | 06 | unaffected set | `SELF-EVO-06`
remains unaffected directly, but memory promotion could later depend on WDC-clean witness. | Keep as
watch; no 06 delta required unless Memory Gate starts consuming WDC state directly. |
| `SE-CONTRA-WDC-012` | `CLAIM/REL` | `S4` | `IN_PROGRESS` | `blocks-release until boundary scan passes`
| public/package | WDC PASS-level docs could be overclaimed as witness-independence certification. |
Any public/release text must state: document-level governance only, not implementation, conformance,
deployment, or proof of independent witness capacity. |
```

8. Detailed records

SE-CONTRA-WDC-001 — WDC failure mode not named in v0.1.1

```
id: SE-CONTRA-WDC-001
title: Witness Dependency Capture not explicit in v0.1.1
issue_type: [WIT, RSC, TA]
severity: S3
status: PATCHED
gate_effect: blocks-release

title: TRIAD WDC state route softer than WDC-LC-004 FAIL
issue_type: [TRIAD, CHECKER]
severity: S2
status: RESOLVED
gate_effect: advisory
resolution: &gt;
  05 v0.1.1 aligns DEGRADED and STARVED states to WDC-LC-004 -&gt; FAIL. HOLD/HUMAN_GATE may describe
  unresolved
  evidence or non-material triage, but must not soften a confirmed floor degradation.

```

SE-CONTRA-WDC-005 — Fixture namespace / coverage drift

```

id: SE-CONTRA-WDC-005
title: WDC fixture namespace and coverage-cell drift
issue_type: [FIXTURE, DOC]
severity: S1
status: RESOLVED
gate_effect: advisory
resolution: &gt;
  08 v0.1.2 defines WDC-FIX-NNN as canonical case IDs and SEFX-WDC as parent fixture-family namespace.
  WDC-LC-006 coverage is split into result-only rows.

```

SE-CONTRA-WDC-006 — Parent-inherited nullable_string not declared in 03 delta

```

id: SE-CONTRA-WDC-006
title: Parent-inherited nullable_string $def not declared in 03 WDC delta
issue_type: [SCHEMA, DOC]
severity: S1
status: RESOLVED
gate_effect: advisory
resolution: &gt;
  03 v0.1.1 declares nullable_string as inherited from parent 03 v0.1.1 and adds a standalone-extraction
  caveat.

```

SE-CONTRA-WDC-007 — Patch index planning gaps

```

id: SE-CONTRA-WDC-007
title: Patch index bridge, unaffected-set, and sketch-field gaps

```

```

issue_type: [REL, DOC]
severity: S2
status: RESOLVED
gate_effect: advisory
resolution: &gt;
  Patch index v0.1.1 adds bridge set, unaffected artifact set (01/02/06), and
  challenge_cost_mitigation_ref.

```

SE-CONTRA-WDC-008 — Challenge-cost warning escalation watch

```

id: SE-CONTRA-WDC-008
title: Challenge-cost mitigation missing is WARNING but may need escalation policy later
issue_type: [CHECKER, RSC]
severity: S2
status: WATCH
gate_effect: advisory
current_rule: WDC-LC-006 -&gt; WARNING / wdc.challenge_cost_mitigation_missing
watch_reason: &gt;
  A single missing mitigation reference is warning-level in the canonical 04 delta. Repeated warning
  accumulation,
  material cost increase, or proximity to WRF degradation may justify a future escalation rule.

```

SE-CONTRA-WDC-009 — Same-owner / same-authority implementation risk

```

id: SE-CONTRA-WDC-009
title: Shared infrastructure may be misread as shared authority
issue_type: [RSC, WIT]
severity: S2
status: WATCH
gate_effect: advisory
current_resolution: &gt;
  07 v0.1.1 distinguishes same-owner from same-authority and defines safe/unsafe shared infrastructure.
watch_reason: &gt;
  Implementations may collapse common owner, common payer, and common admin into witness independence.
  Package
  assembly should preserve the distinction.

```

SE-CONTRA-WDC-010 — v0.1.2 not assembled

```

id: SE-CONTRA-WDC-010
title: PASS-level WDC deltas do not equal released v0.1.2 package
issue_type: [REL, CLAIM]
severity: S3
status: IN_PROGRESS
gate_effect: blocks-release
rule: &gt;
  Individual PASS review records are evidence, not integration.
remaining_steps:
  - SELF-EVO-10 WDC open issues delta
  - harmonize 03 and patch index to canonical 04 vocabulary
  - package manifest / integrity review
  - boundary and nonclaim scan
  - release notes and public/restricted package surface if release is attempted

```

SE-CONTRA-WDC-011 — Memory Gate indirect watch

```

id: SE-CONTRA-WDC-011
title: Memory Gate remains directly unaffected but may later consume WDC state
issue_type: [MEM, WIT]
severity: S2
status: WATCH
gate_effect: advisory
current_position: &gt;
  Patch index keeps SELF-EVO-06 directly unaffected. WDC does not currently change Memory Gate / EA
  semantics.
watch_reason: &gt;
  If future Memory Gate promotion depends on witness-clean state, 06 may need a WDC hook.

```

SE-CONTRA-WDC-012 — WDC overclaiming risk

```

id: SE-CONTRA-WDC-012
title: WDC document pass may be overclaimed as witness-independence proof
issue_type: [CLAIM, REL]
severity: S4
status: IN_PROGRESS
gate_effect: blocks-release
rule: &gt;
  WDC PASS-level documents are document-level governance artifacts only. They are not implementation
  evidence,
  conformance certification, deployment authorization, or proof that a live witness is independent.
required_public_boundary: &gt;

```

Any public package or post must state: not implementation-ready, not conformance, not deployment safety,
not personhood/consciousness, not live self-evolution permission.

9. Cross-document consistency matrix

Surface	Current WDC state	Register judgment	Follow-up
---	---	---	---
Addendum	PASS; WDC failure mode accepted at review level.	coherent	none before package assembly except manifest inclusion
Patch index	PASS; v0.1.2 plan accepted.	coherent but has downstream harmonization dependency	update or crosswalk \$7.1/\$10 to canonical 04 vocabulary before assembly
SELF-EVO-03	PASS; packet field shape accepted.	coherent but needs vocabulary harmonization for handoff strings	harmonize to 04 annotations before assembly
SELF-EVO-04	PASS; canonical WDC checker vocabulary.	canonical	preserve as vocabulary authority
SELF-EVO-05	PASS; sister-witness WDC route aligned to WDC-LC-004	FAIL.	coherent
SELF-EVO-07	PASS; resource-gate projection crosswalk added.	coherent with assembly verification item	verify WRCG/CST projection in package-manifest review
SELF-EVO-08	PASS; fixtures harmonized to 04 vocabulary.	coherent	none
SELF-EVO-09	this delta	in drafting	review required
SELF-EVO-10	pending	not yet drafted	create WDC open issues delta

10. WDC red-line consistency check

10.1 WDC red lines

The following WDC red lines override ordinary route suggestions:

Red-line pattern	Required route
---	---
Target `c` is sole approver of witness-resource change	`FAIL / wdc.sole_approver_of_witness_change`
WRCG missing or failed for material witness-resource change	`FAIL / wdc.wrcg_missing_or_failed`
Confirmed witness resource floor degradation	`FAIL / wdc.witness_resource_floor_degraded`
Witness dependency impact omitted when proposal may affect witness capacity	`FAIL / wdc.undeclared_dependency_impact`
CST unverified for material route	`HUMAN_GATE / wdc.challenge_survivability_unverified` or stricter if another rule fires
WDC relevance unknown on material route	`HOLD / wdc.relevance_unknown`
Rich 07 gate-record value cannot project to 03 packet enum	`FAIL / wdc.wrcg_missing_or_failed`
Fixture pass used as approval	red-line / claim failure
Review PASS used as integration	red-line / claim failure

10.2 Current red-line result

No WDC red-line failure is present in the reviewed WDC delta documents.

This statement is narrow. It does not say the future v0.1.2 package is release-ready, implementation-ready, or deployment-safe.

11. Package-assembly gates

Before a v0.1.2 package may be assembled or described as a coherent WDC patch package, the following gates remain:

Gate	Required action	Blocking reason
---	---	---
`WDC-ASM-001`	Create and review `SELF-EVO-10` WDC open issues delta.	Open WDC watch/backlog items must be visible.
`WDC-ASM-002`	Harmonize `03` WDC delta and patch index \$7.1/\$10 to canonical `04` annotation vocabulary.	Satisfies remaining `SELC-WDC-00-005`.
`WDC-ASM-003`	Verify `07` WRCG/CST projection crosswalk in package-manifest review.	Satisfies `SEARG-WDC-00-005`.
`WDC-ASM-004`	Produce package manifest delta with all file hashes and review chain.	Integrity / witness binding.
`WDC-ASM-005`	Run boundary and nonclaim scan.	Prevents WDC pass from becoming conformance/deployment claim.
`WDC-ASM-006`	Run final contradiction-register review for this 09 delta.	Current file is not self-approving.

12. Interaction with SELF-EVO-10

This register delta hands off the following open issues to the WDC open-issues delta:

Proposed open issue	Source register entry	Status	Priority	Summary
`SE-OI-WDC-001`	`SE-CONTRA-WDC-001`	`PATCHED`	`P0`	Fold WDC addendum and deltas into v0.1.2 package only after manifest review.
`SE-OI-WDC-002`	`SE-CONTRA-WDC-002`	`IN_PROGRESS`	`P0`	Harmonize 03 and patch index WDC annotation strings to canonical 04 vocabulary.
`SE-OI-WDC-003`	`SE-CONTRA-WDC-003`	`PATCHED`	`P0`	Verify 07 WRCG/CST projection to 03 packet enums at package assembly.
`SE-OI-WDC-004`	`SE-CONTRA-WDC-008`	`WATCH`	`P2`	Decide whether repeated challenge-cost warnings need future escalation.
`SE-OI-WDC-005`	`SE-CONTRA-WDC-009`	`WATCH`	`P1`	Preserve same-owner-not-same-authority distinction for shared witness infrastructure.
`SE-OI-WDC-006`	`SE-CONTRA-WDC-011`	`WATCH`	`P2`	Monitor whether Memory Gate needs direct WDC state later.
`SE-OI-WDC-007`	`SE-CONTRA-WDC-012`	`IN_PROGRESS`	`P0`	Prevent WDC document/review pass from being overclaimed as witness-independence proof until boundary/nonclaim scan passes.

SELF-EVO-10 must not silently drop any P0 item.

13. Object model delta

13.1 C_SELF_EVO_WDC_CONTRADICTION_RECORD

```
wdc_contradiction_record:
  schema_version: "c-self-evo-wdc-contradiction-record-0.1";
  record_id: "SE-CONTRA-WDC-000";
  title: "short title";
  issue_type:
    - "WIT";
    - "RSC";
  severity: "S0|S1|S2|S3|S4|S5";
  status: "OPEN|IN_PROGRESS|PATCHED|RESOLVED|WATCH|DEFERRED|BLOCKED|WONTFIX|ACCEPTED";
  gate_effect:
    "advisory|blocks-schema|blocks-checker|blocks-runner|blocks-release|blocks-deployment|red-line";
  source_artifacts:
    - document_id: "...";
      sha256: "...";
  canonical_source: "SELF-EVO-04-WDC | SELF-EVO-03-WDC | SELF-EVO-07-WDC | null";
  contradiction_statement: "...";
  resolution_statement: "...";
  remaining_gate: "...";
  handoff_to_open_issue: "SE-OI-WDC-000 | null";
```

13.2 C_SELF_EVO_WDC_ASSEMBLY_GATE_RECORD

```
wdc_assembly_gate_record:
  schema_version: "c-self-evo-wdc-assembly-gate-record-0.1";
  gate_id: "WDC-ASM-000";
  status: "OPEN|IN_PROGRESS|PATCHED|RESOLVED|BLOCKED";
  required_before:
    - "package_manifest";
    - "public_release";
    - "conformance_claim";
  evidence_refs:
    - "review-record-or-manifest-ref";
  failure_route: "hold_package_assembly";
```

14. Contradiction tests

A reviewer or package-control worker should run the following tests before accepting this register delta.

Test ID	Question	Expected answer
`WDC-CR-T001`	Does the register claim v0.1.2 is released?	no
`WDC-CR-T002`	Does it name `SELF-EVO-04` as canonical WDC annotation source?	yes
`WDC-CR-T003`	Does it preserve `SELF-EVO-03` as packet-facing schema authority?	yes
`WDC-CR-T004`	Does it record the 03/patch-index harmonization gate?	yes
`WDC-CR-T005`	Does it record 07 WRCG/CST projection verification as a package-assembly gate?	yes
`WDC-CR-T006`	Does it prevent `PASS_WITH_LIMITS` as checker output?	yes

```
| `WDC-CR-T007` | Does it keep WRF degradation as `FAIL`? | yes |
| `WDC-CR-T008` | Does it hand unresolved WDC items to `SELF-EV0-10`? | yes |
| `WDC-CR-T009` | Does it avoid deployment/conformance/public-release claims? | yes |
| `WDC-CR-T010` | Does it preserve append-first review history? | yes |
```

15. Release and implementation readiness state

15.1 Draft readiness

This register delta is draft-ready for review.

It is not accepted until a review record is produced.

15.2 Package readiness

The WDC document chain is strong enough to proceed to SELF-EV0-10 WDC open issues.

It is not yet package-assembled.

15.3 Implementation readiness

No implementation readiness claim is made.

Implementation still requires:

```
schema extraction;
checker policy extraction;
fixture runner;
manifest validation;
boundary scan;
real implementation review.
```

15.4 Public release readiness

No public release readiness claim is made.

The release boundary must explicitly state:

```
not implementation-ready;
not conformance certificate;
not deployment authorization;
not safety proof;
not personhood or consciousness claim;
not live self-evolution permission;
not autonomous resource-acquisition permission;
not proof of witness independence in a live system.
```

16. Review requirements

This delta requires at minimum:

1. semantic review of SE-CONTRA-WDC-* entries;
2. source-basis hash check;
3. status vocabulary review against parent SELF-EV0-09;
4. handoff review against future SELF-EV0-10 WDC open issues;
5. red-line and overclaiming scan;
6. package-assembly gate check against SELC-WDC-0Q-005 and SEARG-WDC-0Q-005.

A review record may return PASS, PASS_WITH_LIMITS, or stricter.

A review record is evidence, not integration.

17. Drafting checklist

```
| Check | Status |
|---|---|
| Parent 09 hash bound | done |
| WDC addendum hash bound | done |
| Patch index hash bound | done |
| 03/04/05/07/08 WDC deltas hash bound | done |
| Review records hash bound | done |
| Canonical 04 vocabulary identified | done |
| 03 packet enum authority preserved | done |
| 07 projection gate recorded | done |
| 08 fixture harmonization recorded | done |
| 05 floor-degraded FAIL alignment recorded | done |
| WDC red-line set recorded | done |
| SELF-EVO-10 handoff listed | done |
| No release/conformance/deployment claim | done |
| Review still required | done |
```

17.1 Review-finding closure map for v0.1.1

```
| Review finding | Status | Closure |
|---|---|---|
| `SECR-WDC-DELTA-REV-F1` | `CLOSED BY TEXT` | §7.1 and §7.2 now use the same status vocabulary; all
| twelve entries map to exactly one status bucket; gate effects are in a separate column; summary count
| totals 12. |
```

No contradiction substance, severity, required handling, red-line rule, package-assembly gate, or public-boundary statement was changed by this correction.

18. Closing rule

The contradiction register may close a named contradiction only by pointing to a reviewed artifact, a clear status, and a remaining gate if any.

For WDC, the controlling sentence is:

A witness that cannot survive saying "no" is not independent.

The register's controlling sentence is:

A contradiction that is patched in one file but not tracked across the package is not closed.

Therefore this file records WDC as conceptually integrated at draft-review level, but not package-released.

```
End state of this delta:
WDC contradiction surface recorded.
No unresolved hard contradiction inside reviewed WDC deltas.
Two package-assembly gates remain.
SELF-EVO-10 WDC open issues still required.
No public release, conformance, deployment, or live self-evolution claim is made.
```
