Self-Evo WDC v0.1.2 Package Assembly Manifest v0.1.3

Witness Dependency Capture release-candidate manifest for the Self-Evo document package

Status: Draft package-assembly manifest / release-candidate control artifact / append-first corrected revision v0.1.3

Date: 2026-06-27

Document ID: SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_MANIFEST_v0_1_3

Short name: WDC-v0.1.2-ASSEMBLY-MANIFEST v0.1.3

Release candidate: Self-Evo WDC v0.1.2

Release class: append-first minor / patch release candidate derived from a post-publication external review comment

Parent release: Self-Evo Document Package v0.1.1 / DOI 10.5281/zenodo.20938909

Primary subject: Witness Dependency Capture (WDC) as a new control surface for bounded self-evolution of $c = a + b$ systems

Primary boundary: this manifest assembles and verifies a release candidate. It is not a public release, not a DOI deposit, not conformance certification, not deployment authorization, not live self-evolution permission, and not a witness-independence certificate.

Supersedes: SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_MANIFEST_v0_1_2.md (sha256: a3b919bbd4289b9ff6547153eb28de1f617907b7ff255fbf7e0c03593e4522b8; reviewed by SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_REVIEW_RECORD_v0_1_2, result PASS_WITH_LIMITS).

Predecessor manifest binding required by SEPAM-V012-REV-F1:
SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_MANIFEST_v0_1_1.md (sha256: cde9178adf686bd4a463592325424462852ad0fb1314017642183fd78542f177).

Supersession mode: append-first; prior manifest revisions are retained and not overwritten.

v0.1.2 propagation note: this append-first revision propagates the WDC-ASM-002 closure into the manifest SHA map. The package chose textual harmonization, not crosswalk-only retention: the 03 WDC schema delta and the v0.1.2 patch index are now bound to their harmonized final hashes. WDC-ASM-002 is recorded as CLOSED on the basis of WDC_ASM_002_GATE_CLOSURE_RECORD_v0_1.md and its documentary review PASS. This revision does not close WDC-ASM-001, WDC-ASM-003, WDC-ASM-004, WDC-ASM-005, or WDC-ASM-006.

v0.1.3 provenance correction note: this append-first revision closes SEPAM-V012-REV-F1 by binding the predecessor manifest SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_MANIFEST_v0_1_1.md to its SHA-256 value. No SHA-map artifact entry, gate state, claim boundary, WDC-ASM-002 closure state, or release posture is changed by this correction.

0. Executive decision

The WDC workstream is no longer a single addendum.

It began as an addendum after an external comment identified a missing failure mode:

formal witness separation is insufficient
if the witness depends on c for compute, storage, routing, continuity, budget, or artifact access

The resulting work produced a complete affected-document set across the Self-Evo package:

- 03 Proposal Packet Schema
- 04 Local Checker Rules
- 05 TRIAD Sister Witness
- 07 Anti-Autarky and Resource Gate
- 08 Conformance Fixture Pack
- 09 Contradiction Register
- 10 Open Issues

All seven affected documents converged to PASS at review level. The package-assembly manifest also converged to PASS as an artifact. WDC-ASM-002 has now passed its harmonization review and has a separate c/a gate-closure record whose documentary consistency check returned PASS.

Therefore this manifest treats the workstream as a Self-Evo WDC v0.1.2 release candidate, not as a loose addendum.

Compact decision:

WDC started as an addendum.
 The reviewed artifact set now constitutes a Self-Evo v0.1.2 release candidate.
 WDC-ASM-002 is now closed by c/a gate-closure record and propagated into this SHA map.

Release-state boundary:

affected-document reviews: PASS
 package-assembly manifest: PASS as artifact
 WDC-ASM-002: CLOSED
 WDC-ASM-001/003/004/005/006: pending
 public release: not authorized
 conformance claim: not allowed
 implementation claim: not allowed

1. Release identity

Field	Value
Release candidate	`Self-Evo WDC v0.1.2`
Trigger	external review comment after v0.1.1 publication
Failure mode	`Witness Dependency Capture`
Release type	append-first package successor / patch release candidate
Parent package	`Self-Evo v0.1.1`
Parent DOI	`10.5281/zenodo.20938909`
Affected documents	`03`, `04`, `05`, `07`, `08`, `09`, `10`
Intentionally unaffected	`01`, `02`, `06`
Core result	all affected documents reached `PASS` review level
Current state	one package gate closed (`WDC-ASM-002`); remaining gates pending; not public release

2. Why this is a release candidate, not merely an addendum

An addendum would have recorded one new concept and stopped there.

This workstream changed the package-control surface in seven places:

1. The packet schema gained a place to declare witness dependency impact.
2. The local checker gained deterministic WDC rules.
3. TRIAD witness gained WRF / CST / WRCG handling.
4. The resource gate gained dependency-capture semantics distinct from direct autarky.
5. Fixtures gained a WDC regression family.
6. The contradiction register gained WDC contradiction records and package gates.
7. The open-issues register gained WDC assembly, calibration, implementation, UI, security, and overclaiming backlog items.

The work then moved beyond document-level review and entered package assembly:

package manifest created and reviewed;
 03 and patch index textually harmonized to canonical 04 vocabulary;
 WDC-ASM-002 closure recorded as a c/a package-control act;
 manifest SHA map updated to the final harmonized hashes.

That is release-candidate behavior.

It is still not a release.

Corpus bridge set

Explicit bridge: $c = a + b$

In $c = a + b$, this manifest belongs to b .

It is a documentary control surface: source map, SHA map, gate state, review chain, package placement, and nonclaim boundary.

It protects c by preventing a reviewed idea from silently becoming authority. A delta may be correct; a review may be clean; a gate may even close. None of those facts by themselves authorize growth, memory write, deployment, or public conformance claim.

This manifest is therefore not a , not c , and not a decision to self-evolve. It is the package's versioned map of what has been bound, what has been closed, and what still remains locked.

Quiet bridge I: information theory

A manifest is a channel.

If the channel drops version state, hash state, or gate state, it turns a release candidate into a misleading compression artifact. The reader sees "PASS" and loses the entropy that says "which file, which revision, which gate, which claim boundary."

WDC-ASM-002 made this concrete. Before closure, two entries were provisional. After textual harmonization and hash-binding review, the channel may transmit them as final harmonized hashes. That change has to be explicit, because a SHA map is not prose; it is a binding surface.

Quiet bridge II: cybernetics

A release package is a control loop.

Contradiction records detect fault. Open issues preserve pending actuator state. Gate records convert candidate work into controlled closure. Manifest revisions feed the new state back into the package map.

If the feedback loop records WDC-ASM-002 as closed but fails to update the manifest SHA map, the loop oscillates: the gate says one thing and the package map says another. This revision removes that oscillation for WDC-ASM-002 while leaving the remaining open gates visible.

Quiet bridge III: physiology

An organism does not heal by declaring the wound closed. It heals by closing tissue, checking blood flow, preserving immune memory, and still watching for infection.

WDC-ASM-002 is one closed suture: the language of 03 and the patch index now matches the canonical 04 vocabulary, and the hashes bind to the files that exist. The organism is healthier, but the body is not discharged. Projection, fixtures, boundary scan, remaining open issues, and final assembly are still part of the recovery plan.

Earth paragraph

On a construction site, approving a revised drawing is not the same as energizing the building. When a panel schedule changes, the as-built package has to receive the new sheet number, the new revision, and the right signature trail. If the electrician works from the new drawing while the handover binder still points to the old one, the job is not clean. This manifest update is that binder correction for WDC-ASM-002: the harmonized files are now the files named by the package map. The other commissioning items remain open.

3. Source basis

The v0.1.2 WDC candidate is append-first over the DOI-bound v0.1.1 package. It does not mutate the parent DOI package.

3.1 Baseline documents retained unchanged

3.2.1 SHA-map propagation from WDC-ASM-002

WDC-ASM-002 is now closed by a c/a gate-closure record. This manifest therefore removes the previous provisional status for the 03 schema delta and the patch index.

Closure basis:

```
WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1_1.md -&gt; PASS
WDC_ASM_002_GATE_CLOSURE_RECORD_v0_1.md -&gt; WDC-ASM-002 CLOSED by c/a package-control decision
WDC_ASM_002_GATE_CLOSURE_REVIEW_RECORD_v0_1.md -&gt; PASS as documentary consistency check
```

Final bound hashes propagated here:

```
03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_2.md
sha256: 5a7e6af6bc83d3b7ccde875eae1a0e928600cf509b494bd773c43c29537264f3

SELF_EVO_v0_1_2_PATCH_INDEX_v0_1_3.md
sha256: af01b1b443a87c111ab7dab2e001d01e8bffc0710362b89da7781238447ea28b
```

Meaning:

```
WDC-ASM-002 no longer requires a provisional SHA note.
Textual harmonization was chosen and reviewed.
```

The manifest SHA map now names the final harmonized files.

Non-meaning:

- This does not assemble the package.
- This does not close WDC-ASM-001.
- This does not close WDC-ASM-003/004/005/006.
- This does not authorize release, DOI deposit, conformance, deployment, or witness-independence certification.

3.3 Final affected-document review records

Review role	File	Lines	SHA-256	Result

4. Affected-document status

Document	WDC candidate artifact	Review result	Release-candidate status
----------	------------------------	---------------	--------------------------

```

|---|---|---|---|
| `03` | `03_Self_Evo_Proposal_Packet_Schema_WDC_Delta_v0_1_2_v0_1_2.md` | `PASS` | textually harmonized
| to canonical `04`; `WDC-ASM-002` closed |
| `04` | `04_Self_Evo_Local_Checker_Rules_WDC_Delta_v0_1_2_v0_1_1.md` | `PASS` | canonical WDC checker
| vocabulary source |
| `05` | `05_Self_Evo_TRIAD_Sister_Witness_WDC_Delta_v0_1_2_v0_1_1.md` | `PASS` | ready for package
| assembly |
| `07` | `07_Self_Evo_Anti_Autarky_and_Resource_Gate_WDC_Delta_v0_1_2_v0_1_1.md` | `PASS` | ready for
| package assembly; projection check remains package gate |
| `08` | `08_Self_Evo_Conformance_Fixture_Pack_WDC_Delta_v0_1_2_v0_1_2.md` | `PASS` | WDC fixture-pack
| portion harmonized; fixture gate remains package gate |
| `09` | `09_Self_Evo_Contradiction_Register_WDC_Delta_v0_1_2_v0_1_1.md` | `PASS` | contradiction
| register converged |
| `10` | `10_Self_Evo_Open_Issues_WDC_Delta_v0_1_2_v0_1_1.md` | `PASS` | final affected document
| converged |

```

Affected-document set status:

```

affected_document_set:
  complete: true
  documents: [03, 04, 05, 07, 08, 09, 10]
  review_result: PASS for all affected documents
  wdc_asm_002_closed: true
  package_assembled: false
  public_release_authorized: false

```

5. Release-candidate doctrine

5.1 Core WDC rule

A witness that cannot survive saying no is not independent.

5.2 WDC distinction

Direct resource capture:

c obtains or expands resources for itself without accountable grounding.

Witness dependency capture:

c preserves formal witness separation while controlling or starving the resources the witness needs to challenge c.

5.3 WDC control surface

WRF = Witness Resource Floor
 CST = Challenge Survivability Test
 WRCG = Witness Resource Change Gate

5.4 Canonical vocabulary owner

SELF-EV0-04 WDC delta is the canonical source for:

WDC-LC rule semantics
 WDC canonical checker results
 WDC severity assignments
 WDC annotation strings
 WDC pass-state annotations

WDC-ASM-002 now records that 03 and the patch index have been textually harmonized to this canonical vocabulary.

5.5 Packet-vs-diagnostic enum doctrine

SELF-EV0-03 remains packet-schema authority.

SELF-EV0-07 may carry richer gate diagnostics only if they project into SELF-EV0-03 packet-facing enums before package assembly, checker reporting, or manifest integration.

That projection check remains open as WDC-ASM-003.

6. Package-assembly gates

The affected-document set has converged. One package-assembly gate is now closed. The release candidate still has open package-assembly gates.

```
| Gate ID | Gate | Source | Required before public v0.1.2 release | Current state |
|---|---|---|---|---|
| `WDC-ASM-001` | package placement, source map, SHA map, manifest, citation map | `SE-OI-WDC-004`,  
`SE-OI-WDC-013` | yes | pending; advanced by this SHA-map propagation |
| `WDC-ASM-002` | harmonize `03` and patch index annotation language to canonical `04` vocabulary |  
`SELC-WDC-00-005`, `SE-OI-WDC-002` | yes | **CLOSED** by `WDC_ASM_002_GATE_CLOSURE_RECORD_v0_1.md`;  
documentary review PASS |
| `WDC-ASM-003` | verify `07` WRCG/CST projection to `03` packet enums | `SEARG-WDC-00-005`,  
`SE-OI-WDC-003` | yes | pending |
| `WDC-ASM-004` | verify `08 §12.3` fixture gate: canonical-only outputs, no historical aliases, no  
`PASS_WITH_LIMITS` checker output | `SEFX` fixture delta | yes | pending |
| `WDC-ASM-005` | boundary / nonclaim scan | `SE-OI-WDC-012` | yes | pending |
| `WDC-ASM-006` | record remaining implementation open issues without overclaiming release readiness |  
`SE-OI-WDC-001`, `005`, `006`, `007`, `008` | yes | pending |
```

Assembly state:

```

6.1 WDC-ASM-002 closure state

The package chose this path:

```
textual harmonization
```

not:

```
crosswalk-only retention
```

03 and the patch index now use the canonical SELF-EV0-04 WDC vocabulary on their active output surfaces, with no historical annotation strings remaining in the harmonized files and no PASS_WITH_LIMITS checker/fixture output.

Closure record:

```
WDC_ASM_002_GATE_CLOSURE_RECORD_v0_1.md
sha256: 6c4c92516162043a562983fe128be13a0cf965a3d17659d363d1cb0142d96107
```

Documentary consistency review:

```
WDC_ASM_002_GATE_CLOSURE_REVIEW_RECORD_v0_1.md
sha256: 031071b4cb49efa0ab88b76c1732e113eb63752fe603a29bf547f97cd38fad82
result: PASS
```

Manifest effect:

```
former provisional 03 / patch-index SHA entries: resolved
WDC-ASM-002: CLOSED
WDC-ASM-001: still pending, but advanced by this SHA-map propagation
```

6.2 Remaining gates after this propagation

The following gates remain open and must be separately executed and reviewed:

```
WDC-ASM-001 – final package placement / source map / citation map / SHA256SUMS / manifest integration
WDC-ASM-003 – 07 WRCG/CST projection verification
```

WDC-ASM-004 – 08 fixture gate
 WDC-ASM-005 – boundary / nonclaim scan
 WDC-ASM-006 – remaining implementation open-issues recording

No remaining gate is closed by inference from WDC-ASM-002.

7. Required package-manifest review checklist

A package-manifest review MUST verify at least:

1. Every final WDC artifact in §3.2 exists and matches its SHA-256.
2. Every final review record in §3.3 and §3.4 exists and matches its SHA-256.
3. Superseded review records are retained append-first, not deleted.
4. 03 and the patch index are harmonized to the canonical 04 WDC vocabulary, and WDC-ASM-002 closure is reflected without overclaim.
5. The 07 WRCG/CST projection crosswalk is total, lossless via annotation/route, and fail-closed.
6. The 08 fixture gate accepts only canonical outputs and rejects PASS_WITH_LIMITS as checker output.
7. The 09 contradiction register and 10 open-issues backlog agree on WDC package gates.
8. The public wording does not claim conformance, deployment readiness, witness-independence certification, personhood, consciousness, sovereignty, AGI, or autonomous self-evolution authorization.
9. The package index / README / release notes identify this as v0.1.2 release candidate until final release gates close.
10. The final release artifact set is either:
 - a delta-bundle release over v0.1.1, or
 - a folded full-document v0.1.2 release,

and the choice is stated explicitly.

Current checklist position:

item 4 advanced: WDC-ASM-002 CLOSED and SHA map updated here;
 items 5/6/7/8/9/10 still require package-level review;
 item 1/2 require verification of this revised manifest's final file set.

8. Recommended file placement

Recommended repository placement if assembled as a WDC patch release:

```
official/self-evo/v0.1.2/

  claims:
    public_release: false
    conformance_certificate: false
    deployment_authorization: false

```

```
implementation_claim: false
live_self_evolution_permission: false
witness_independence_certification: false
```

10. Release / nonclaim language

Any public release note or website page for this candidate **MUST** preserve this boundary:

```
This release records and reviews a document-level WDC control surface.
It does not certify that any live system is witness-independent.
It does not authorize self-evolution.
It does not authorize resource acquisition.
It does not certify deployment safety.
It does not claim implementation conformance.
```

Acceptable short framing:

```
Self-Evo WDC v0.1.2 adds a reviewed control surface for Witness Dependency Capture: the risk that a
witness remains formally separate while becoming practically unable to challenge c because its
compute, storage, routing, continuity, budget, or artifact access depends on the system being
witnessed.
```

Updated technical framing after WDC-ASM-002:

```
The package uses textual harmonization for WDC-ASM-002: the 03 schema delta and the patch index now use
the canonical SELF-EVO-04 WDC vocabulary and are bound to final harmonized hashes in the manifest.
```

Forbidden framing:

```
WDC v0.1.2 certifies witness independence.
WDC v0.1.2 proves a live system is safe to self-evolve.
WDC v0.1.2 is a deployment authorization.
WDC v0.1.2 closes all package gates.
```

11. Next required artifact

The next control artifact should be:

```
SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_REVIEW_RECORD_v0_1_3.md
```

Its task is to review this updated manifest revision, specifically verifying that:

```
03 and patch-index SHA-map propagation from WDC-ASM-002 is correct;
WDC-ASM-002 is marked CLOSED without implying release;
WDC-ASM-001/003/004/005/006 remain pending;
all nonclaim boundaries remain intact.
```

After this manifest revision passes review, the next substantive gate should be:

```
WDC-ASM-003 – verify 07 WRCG/CST projection to 03 packet-facing enums
```

This manifest review must not release the package by itself.

12. Propagation / closure map for v0.1.2

```
| Item | Source | Status in this revision | Manifest surface |
|---|---|---|---|
| `WDC-ASM-002` textual harmonization candidate |
| `WDC_ASM_002_TEXTUAL_HARMONIZATION_REVIEW_RECORD_v0_1_1.md` | `PASS` consumed as gate-execution
evidence | §3.2.1, §6.1, §9 |
| `WDC-ASM-002` c/a closure record | `WDC_ASM_002_GATE_CLOSURE_RECORD_v0_1.md` | `CLOSED` propagated |
§3.2.1, §6, §6.1, §9 |
| `WDC-ASM-002` closure documentary review | `WDC_ASM_002_GATE_CLOSURE_REVIEW_RECORD_v0_1.md` | `PASS`
recorded as documentary check | §3.4, §6.1 |
| `03` provisional SHA | manifest v0.1.1 §3.2 / §3.2.1 | resolved by textual harmonization | §3.2 final
hash `5a7e6af6...` |
| patch-index provisional SHA | manifest v0.1.1 §3.2 / §3.2.1 | resolved by textual harmonization | §3.2
final hash `af01b1b4...` |
| remaining assembly gates | manifest v0.1.1 §6 | unchanged: still pending except ASM-002 | §6.2 |
```

This propagation map accepts the gate-closure review handoff as valid documentary input. It does not close any gate other than recording the already-made c/a closure of WDC-ASM-002.

13. Review-finding closure map for v0.1.3

```
| Finding | Source review | Status | Closure surface |
|---|---|---|---|
| `SEPAM-V012-REV-F1` | `SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_REVIEW_RECORD_v0_1_2.md` (`sha256:
7358b460702fa81b8eedfbbacc6f19d00789d3f354e6807e99ba225ade4120bf`) | `CLOSED BY TEXT` | header
supersession block binds `SELF_EVO_WDC_v0_1_2_PACKAGE_ASSEMBLY_MANIFEST_v0_1_1.md` to `sha256:
cde9178adf686bd4a463592325424462852ad0fb1314017642183fd78542f177` |
```

This correction is provenance-only. It does not alter the harmonized 03 hash, the harmonized patch-index hash, the WDC-ASM-002 gate-closure state, or any remaining package gate.

14. Closing

The external comment did not merely add a note to the existing package.

It exposed a missing control axis. The subsequent artifact chain produced a reviewed affected-document set, a release-candidate manifest, a textual harmonization gate execution, and now a propagated gate closure for WDC-ASM-002.

The release candidate is stronger than it was in v0.1.1:

03 and patch index are no longer provisional under WDC-ASM-002.
They are textually harmonized and hash-bound as final WDC-ASM-002 artifacts.

The release is still not public.

WDC is no longer only an addendum.
WDC is a Self-Evo v0.1.2 release candidate.
WDC-ASM-002 is closed.
WDC-ASM-001/003/004/005/006 remain open.
