08b - External Review Conflict Resolution and Patch Intake Ledger v0.1

Artifact: 08b_EXTERNAL_REVIEW_CONFLICT_RESOLUTION_AND_PATCH_INTAKE_LEDGER_v0_1 Package: CCALC_EXTERNAL_REVIEW_CONFLICT_PATCH_LEDGER_08b_v0_1 Layer: c-calculus / interoperability / external review / conflict resolution / patch intake Status: normative-supporting executable seed; not standards certification; not deployment authorization; not C-A1 ratification. Created UTC: 2026-07-05T13:34:38Z

0. Purpose

08a admits external review as bounded evidence. 08b defines what happens next when external review creates a conflict or proposes a patch.

The governing formula is:

```
external finding -&gt; conflict record -&gt; resolution review -&gt; patch candidate -&gt; ledger append -&gt; bounded internal gate
```

The core boundary is:

```
A review conflict is evidence, not authority.
A patch is a candidate, not an applied change.
A conflict resolution record may lower uncertainty, not bypass governance.
```

1. Source bindings

```
| Component | SHA-256 |
|---|---|
| `DOC04_CONTINUITY_STACK_UMBRELLA` | `6caeab8d489aaa6b26902db3bd3ece4c5169e5c8d5617b93aed6586ea900322d` |

```

08b binds to 04-07, 08, and 08a because conflict resolution and patch intake can affect continuity claims, self-evolution gates, runtime authority, public evidence/citation surfaces, and external review intake.

2. Record surfaces

08b defines these record shapes:

```
ExternalReviewConflictRecord
ConflictResolutionRecord
PatchIntakeLedgerEntry
PatchProposalRecord
PatchEvaluationRecord
PatchDecisionRecord
PatchApplicationPlan
PatchSupersessionRecord
PatchNegativeCacheRecord
```

The included checker seed validates a combined ExternalReviewPatchIntakePacket.

3. Normative rules

R1 - Conflict records are append-only evidence

External conflict records are ledger entries. They may not silently overwrite the source artifact, review packet, release bundle, public citation surface, or runtime/session ledger.

R2 - A patch is never self-applying

A patch accepted by 08b is only accepted for bounded internal review. It is not applied by the external reviewer, a b-layer reviewer, a tool runner, or a repository issue by itself.

R3 - Independent resolution is required for high/critical conflicts

The original external reviewer may clarify their report, but they cannot unilaterally close a high/critical conflict that they created. A named human reviewer, owner anchor, or governance quorum must bind the resolution.

R4 - Model/tool outputs are advisory

Model review, tool output, fixture output, and automated patch suggestions can support triage. They cannot resolve conflicts, accept patches, apply patches, or ratify claims.

R5 - Claim-force may not be escalated by patch intake

A patch can lower, clarify, correct, reject, or supersede a claim. It may not transform external assertions into internal ratification, safety certification, standards certification, deployment authorization, or C-A1.

R6 - Forbidden surfaces stay forbidden

Memory core mutation, runtime authority changes, deployment authorization, C-A1 ratification, and safety/legal/standards certification are outside the authority of 08b.

R7 - Public surface changes require correction discipline

A patch that changes public citation/release surfaces must bind to 07b/07c/07d style custody, public notice, errata, supersession, or citation-sync records. Silent in-place edits are not allowed.

R8 - Tests and rollback are required for executable/schema changes

Schema, checker, fixture, and mutation-surface patches require tests. Accepted patch candidates require rollback or rejection strategy before internal application.

R9 - Negative-cache and red-pattern dominance

A negative-cache hit or unresolved high/critical red pattern blocks accept/apply paths. It may only produce hold, quarantine, rejection, or bounded owner review.

4. Checker seed

The stdlib-only checker is:

```
src/external_review_patch_intake_checker_v0_1.py
```

It validates:

```
required source bindings
review/patch hash custody
append-only ledger chain shape
reviewer/resolver role limits
model-only laundering
self-resolution of high/critical conflicts
unresolved conflict admission
claim-force escalation
C-A1 exact-token boundary with C-A10 control
forbidden memory/runtime/deployment surfaces
private/secret raw patch material
schema/checker/fixture test requirement
rollback requirement
negative-cache and red-pattern dominance
public correction/supersession requirements
institutional request as authority
```

5. Non-claims

```
not legal advice
not privacy-law certification
not safety certification
not deployment authorization
not standards compliance certification
not C-A1 ratification
not live substrate truth
not proof of completeness
```

6. Next layer

The next natural layer is:

```
08c_INTEROP_IMPLEMENTATION_REPORT_AND_REPRODUCTION_MAPPING_v0_1
```
