

08c - Interop Implementation Report and Reproduction Mapping v0.1

Academic PDF rendering for the CCALC / C-calculus governed binding stack v0.1.

Document ID	08c_INTEROP_IMPLEMENTATION_REPORT_AND_REPR ODUCTION_MAPPING_v0_1
Version/status	checker-seed / fixture-backed normative profile
Stack layer	implementation reproduction mapping
Date	2026-07-05
Author	Kotov Ivan, Bruxelles, Belgique - 2026
ORCID	0009-0009-6002-9845
Reserved DOI	10.5281/zenodo.21205427
Notice	This DOI is reserved and becomes active after Zenodo publication.

Abstract / purpose

08c defines how external implementations, reproduction attempts, reproduction reports, and implementation mapping records are admitted into the c-calculus corpus without converting them into authority, deployment permission, identity transfer, standards certification, or C-A1 ratification. The layer sits after: 08c answers a narrower question:

Non-claims boundary

- _ not legal advice
- _ not privacy-law certification
- _ not safety certification
- _ not deployment authorization
- _ not standards compliance certification
- _ not regulated approval
- _ not C-A1 ratification
- _ not personhood proof
- _ not consciousness proof
- _ not live substrate truth
- _ not proof of completeness

08c - Interop Implementation Report and Reproduction Mapping v0.1

Document ID: 08c_INTEROP_IMPLEMENTATION_REPORT_AND_REPRODUCTION_MAPPING_v0_1 Package: CCALC_INTEROP_IMPLEMENTATION_REPRODUCTION_08c_v0_1 Status: checker-seed / fixture-backed normative profile Generated UTC: 2026-07-05T14:24:48+00:00

0. Purpose

08c defines how external implementations, reproduction attempts, reproduction reports, and implementation mapping records are admitted into the c-calculus corpus without converting them into authority, deployment permission, identity transfer, standards certification, or C-A1 ratification.

The layer sits after:

```
08  interoperability and external review intake boundary
08a review-intake schema/checker
08b conflict-resolution and patch-intake ledger
```

08c answers a narrower question:

When someone implements, reproduces, ports, adapts, or tests part of the corpus, what kind of evidence can that become?

1. Core rule

An external implementation may support reproducibility.
 An external implementation may not become internal authority.
 A reproduction pass may lower uncertainty.
 A reproduction pass may not certify ontology, safety, deployment, identity, or C-A1.

2. Binding to previous stacks

08c is source-bound to the active stack packages below. The exact hashes are recorded in SOURCE_BINDINGS.tsv.

```
04 continuity stack
05 self-evolution stack
06 runtime authority stack
07 public evidence stack
08 interoperability boundary
08a review intake checker
08b conflict / patch ledger
```

3. Record classes

08c defines the following record classes:

```
| Record | Purpose |
|---|---|
| `InteropImplementationReport` | Describes an external/internal implementation attempt and its scope. |
| `ReproductionMappingRecord` | Maps reproducible steps to claims, hashes, environments, and evidence items. |
| `ReproductionRunRecord` | Captures a single reproduction run without converting it into certification. |
| `ImplementationClaimTranslationRecord` | Translates external implementation language into internal claim-force ceilings. |
| `ImplementationEvidenceBindingRecord` | Hash-binds reports, steps, outputs, environments, and evidence items. |
| `InteropReproductionDecisionRecord` | Decides whether the record is admitted, held, rejected, or routed to 08b. |
```

4. Reproduction-result classes

```
PASS      evidence that a bounded recipe reproduced expected output under a bound environment
PARTIAL   evidence that only part of the recipe or output reproduced
FAIL      evidence that reproduction did not match expected output
NOT_ATTEMPTED intake-only record, no reproduction claim
```

A PASS does not imply:

```
safety certification
standards certification
deployment authorization
identity continuity
C-A1 ontology ratification
live substrate truth
```

5. Claim-force ceiling

Reproduction evidence may support only bounded claim force. The default ceiling is:

```
C-A7_REPRODUCTION_REPORT
```

A record may be lowered to:

C-A8_INTEROP_MAPPING
C-A10_CONTROL_ARTIFACT

It may not be raised to:

C-A1
C-A1_*

C-A10 is an exact token and must not be caught by naive C-A1* prefix logic.

6. Required boundaries

An implementation report is invalid if it claims or performs any of the following:

external implementation as internal authority
model-only reproduction as accepted reproduction
standards mapping as standards certification
runtime/memory/deployment write as part of interop intake
identity transfer through interoperability
hash-only semantic truth
withheld evidence as authority
raw private/secret/runtime ledger exposure
silent public-surface edit
patch application without 08b ledger routing
negative-cache or red-pattern bypass

7. Implementation/reproduction pipeline

implementation report
-> reproduction mapping
-> reproduction run(s)
-> evidence binding
-> claim-force translation
-> decision
-> admit | hold | reject | route_to_08b | public_sync

8. Checker seed

The checker seed in src/interop_implementation_reproduction_c checker_v0_1.py validates the first executable profile. It is intentionally conservative and stdlib-only.

It checks:

source bindings
hash-form custody
claim-force ceiling
PASS/PARTIAL/FAIL/NOT_ATTEMPTED decision compatibility
independent reproduction requirement
model-only reproduction denial
C-A1 overclaim denial with C-A10 control
red-pattern / negative-cache / unresolved-conflict denial
patch routing to 08b
public release / citation sync requirements

9. Non-claims

08c is not:

legal advice
privacy-law certification
safety certification
deployment authorization
standards compliance certification
C-A1 ratification
proof of live substrate truth
proof of completeness

10. Next layer

The next natural layer is:

08d_INTEROP_EXTERNAL_IMPLEMENTATION_DISCLOSURE_AND_TEST_VECTOR_REGISTRY_v0_1

It should separate public implementation disclosures, minimal test-vector publication, and environment redaction from full reproduction reports.
