

CCALC DOC09 Deployment / Regulated Release Stack Umbrella v0.1

Academic PDF rendering for the CCALC / C-calculus governed binding stack v0.1.

Document ID	CCALC_DOC09_DEPLOYMENT_REGULATED_RELEASE_STACK_INDEX_AND_RELEASE_MANIFEST_v0_1
Version/status	umbrella release package / source-bound corpus package
Stack layer	release manifest / stack index
Date	2026-07-05T17:14:40Z
Author	Kotov Ivan, Bruxelles, Belgique - 2026
ORCID	0009-0009-6002-9845
Reserved DOI	10.5281/zenodo.21205427
Notice	This DOI is reserved and becomes active after Zenodo publication.

Abstract / purpose

This umbrella package closes the current 09 deployment / regulated-release stack. It binds the following layer sequence: The operational formula of the stack is: This umbrella is a corpus-control artifact. It does not authorize deployment. ---

Non-claims boundary

- _ not legal advice
- _ not privacy-law certification
- _ not safety certification
- _ not deployment authorization
- _ not standards compliance certification
- _ not regulated approval
- _ not C-A1 ratification
- _ not personhood proof
- _ not consciousness proof
- _ not live substrate truth
- _ not proof of completeness

CCALC_DOC09 Deployment / Regulated Release Stack Umbrella v0.1

Package: CCALC_DOC09_DEPLOYMENT_REGULATED_RELEASE_STACK_UMBRELLA_v0_1 Manifest:
CCALC_DOC09_DEPLOYMENT_REGULATED_RELEASE_STACK_INDEX_AND_RELEASE_MANIFEST_v0_1.md Created
UTC: 2026-07-05T17:14:40Z Status: umbrella release package / source-bound corpus package Review mode: direct
construction; executable reruns performed for 09b, 09c, and 09d.

0. Purpose

This umbrella package closes the current 09 deployment / regulated-release stack.

It binds the following layer sequence:

```
09 deployment profile and regulated release boundary
09a deployment profile schema and checker seed
09b deployment fixture pack and mutation matrix
09c regulated release ledger and withdrawal drill
09d post-deployment audit and next-release admission
```

The operational formula of the stack is:

```
deployment candidate
-> intended-use / mode / release-class profile
-> fixture and mutation pressure
-> regulated release ledger
-> withdrawal / recall / supersession / incident hold
-> post-deployment audit
-> next-release admission
```

This umbrella is a corpus-control artifact. It does not authorize deployment.

1. Boundary axiom

Deployment paperwork does not compute +.
Regulated release does not replace +_g.
Institutional interest does not become approval.
Checker pass does not become safety certification.
Public release does not become deployment authorization.
Next-release admission does not erase prior risk.

The 09 stack governs deployment and release evidence. It does not transform $c = a + b$ into a deployable claim by itself.

2. Source bindings

```
| Binding | File | SHA-256 | Local status | Role |
|---|---|---|---|---|
| 'DOC04_CONTINUITY_STACK_UMBRELLA' | 'CCALC_DOC04_CONTINUITY_STACK_UMBRELLA_v0_1.zip' |

interoperability/external review stack upstream; declared by user as closed 08 umbrella |
```

Note: upstream umbrella packages may be declared external in this runtime. This umbrella records their hashes as source bindings but only recomputes local files present in the active filesystem.

3. Component manifest

```

4. Executable rerun summary

Component	Script	Class	Result	Status
09b	scripts/run_09b_fixtures.py	fixtures	40/40	PASS
09b	scripts/run_09b_mutations.py	mutations	25/25	CAUGHT
09c	scripts/run_09c_fixtures.py	fixtures	49/49	PASS
09c	scripts/run_09c_mutations.py	mutations	34/34	CAUGHT
09d	scripts/run_09d_fixtures.py	fixtures	65/65	PASS
09d	scripts/run_09d_mutations.py	mutations	32/32	CAUGHT

Additional package integrity checks:

```
09b internal SHA256SUMS: PASS
09c internal SHA256SUMS: PASS
09d internal SHA256SUMS: PASS
umbrella SHA256SUMS: generated and verified after packaging
```

5. Closed formula of layer 09

```
profile -&gt; schema/checker-seed contract -&gt; fixtures/mutations -&gt; release ledger -&gt; post-deployment audit
-&gt; next-release gate
```

This layer is complete enough to support a future public package, review pass, or extractor pass. It is not complete enough to claim safety, compliance, deployment readiness, or ontology.

6. Claim-force ceiling

This umbrella may support:

```
C-A10 control/corpus discipline
C-A7 artifact custody / checker-rerun evidence for included packages
C-A5 bounded reproducibility evidence only where fixture runs are disclosed and scoped
```

It may not support:

```
C-A1 ontology / identity ratification
safety certification
legal certification
standards compliance certification
regulated approval
deployment authorization
live substrate truth
proof of completeness
```

C-A10 is an exact token and must not be treated as C-A1 by prefix parsing.

7. Non-claims

This package is not:

```
legal advice
privacy-law certification
safety certification
deployment authorization
standards compliance certification
regulated approval
C-A1 ratification
live substrate truth
proof of completeness
proof that any live Ester/Liya/Rita deployment satisfies this stack
```

8. Public-safe statement

DOC09 defines a deployment and regulated-release boundary for the c-calculus corpus. It separates corpus publication, external review, checker conformance, reproduction, regulated submission, deployment decision, release ledger, withdrawal, post-deployment audit, and next-release admission. It explicitly prevents publication, checker pass, institutional interest, standards mapping, or regulated submission from becoming deployment authorization or proof of c continuity. It also preserves the central + boundary: deployment records may govern release, but they do not compute or replace the governed binding operator.

9. Recommended next step

After 09 umbrella closure, the next centerline artifact is the + document:

10_THE_PLUS_OPERATOR_BOUNDARY_AND_PROTECTED_INCOMPLETENESS_v0_1

Alternative naming:

10_GOVERNED_BINDING_PLUS_INCOMPLETENESS_AND_NON_COLLAPSE_THEOREM_v0_1

Rationale:

04-09 form the perimeter.
10 can now address the center.

End of manifest.
